Seymour, R. A., with W. H. B. Cooper, temperature-dependent resistors, **666**
Shadowitz, A., shunted-amplifier input admittance, **2758**
Shamos, M. H., and I. Hudes, design of metal G-M counters, **1102**
Shankland, J. H., with others, p.m. signal generator for 260–800 Mc/s, **1697**
Shanklin, J. P., v.h.f. aerial, with circular polarization, **1560**, with vertical polarization, **1279**
Shapiro, H., with others, ultrasonic delay lines, **2479**
Sharp, C. E., and R. E. Lacy, portable microwave communication set, **2914**
Sharpless, T. K., Hg delay lines, **673**; high-speed *n*-scale counters, **2186**
Shaw, I. J., with J. A. Ratcliffe, interaction of radio waves, **3219**
Shaw, R. F., with others, mercury-delay-line memory, **(A) 2475**
Shawe, L. W., and C. M. Burrell, direct-reading cm-λ wavemeters, **2018**; Q-meter for 10-cm echo boxes, **2005**
Shearer, D. G., and W. W. Brockway, radiovisor landing system for aircraft, **(A) 2524**
Shelton, G. R., A. S. Creamer and E. N. Bunting, Ba-Mg titanate dielectrics, **3441**
Shembel, B. K., circuit equivalent of quartz crystals, **1389**
—— with O. A. Tkhorzhevski, synchronization of valve oscillator by a harmonic, **1308**
Shepard, H. C., with W. J. Poch, television mobile unit, **1789**
Shepard, W. G., high-gain d.c. amplifier, **380**
Shepherd, W. G., with J. O. McNally, reflex oscillators for radar, **1518**
—— with J. R. Pierce, reflex oscillators, **611**
Sheppard, C. B., with others, mercury-delay-line memory, **(A) 2475**
Sheppard, P. A., structure and refractive index of lower atmosphere, **1939**
Sherman, R., light-weight waveguides, **755**
Sherrod, H. C., resonant-line coil, **72**
Shersby-Harvie, R. B. R. See Harvie, R. B. R. S.
Sherwin, C. W., short time delays in G-M counters, **2578**
Sherwood, F. L., with B. C. O'Brien, phase monitor for broadcast arrays, **1092**
Shipton, H. W., with others, demagnetizing amplifier valves to cure ripple, **3559**
Shklover, D. A., luminescent output of phosphors, **2261**
Shklovsky, I. S., galactic and solar r.f. emission, **95**
Shlyamin, B. A., radar and weather, **2254**
Shockley, W., and G. L. Pearson, effect of surface charges on thin semiconductor films, **3438**
Shone, A. B., and R. T. Fatehchand, measurement of telegraph distortion, **2857**
Shonnard, J. R., facsimile modulator photocell, **2961**
Shuffrey, A. L., with others, modulation and waveform of light beam, **1087**
Shulman, C., and M. S. Heagy, theory of travelling-wave valve, **2103, (C) 3274**
Shunaman, F., pulse-code modulation, **2828**
Shur, Ya. S., and A. S. Khokhlov, thermomechanical treatment of ferromagnetic materials, **1062**
—— and A. A. Lukshin, magnetization and magnetostriction curves of alsifer alloys, **1984**
—— with others, effect of rust and recrystallization on soft magnetic materials, **1983**
Sichak, W., and S. Milazzo, aerials for circular polarization, **3343**, and elliptical polarization, **(A) 342**
Siesen, G. J., and F. Kerkhof, home projection television, **2387**
Siforov, V. I., u.h.f. amplifiers, noise in, **3067**, theory of, **879**
Siling, P. F., frequency allocations, **1747**
Sillars, R. W., with others, SiC nonlinear resistors, **(D) 3361**
Silver, M., monitoring equipment for f.m. broadcasting, **488, 2861**; pretuned band-pass frequency multiplier, **684**
—— and H. A. French, high-quality broadcasting radio links, **(A) 2614**
—— with others, stabilized f.m. system, **860**
Simane, C., with P. Debraine, automatic synchronization of cyclotron, **2038**
Simon, E., with F. W. Thomas, soldering Al alloys, **2827**
Simon, L., dielectric aerials, **3348**
Simons, R. F., with others, stabilized airborne magnetometer, **798**
Simpson, A. I. F., design of small single-layer coils, **963**
Simpson, O., conductivity of PbSe films, **1876**
—— G. B. B. M. Sutherland and D. E. Blackwell, PbTe photocells, **2660**
—— with others, PbSe photocells, **1815**
Simpson, S. H., Jr, and R. E. Hammond, facsimile standards, **1772**
Sinclair, D. B., measurements at v.h.f., **1408**
Sinclair, G., E. C. Jordan and E. W. Vaughan, aerial radiation pattern measurements using models, **1276**
Singh, R. N., with S. S. Banerjee, F_2-layer electron density near equator, **2239**
Singleton, H. E., with R. S. Bailey, reducing transmission bandwidth, **3539**
Sittel, K., with E. Menzer, f.m. radiosonde, **(B) 2588**
Sittkus, A., effect of magnetic storm on cosmic radiation, **3113**
Sivian, L. J., ultrasonic absorption in air and other gases, **914**
Skellett, A. M., radial beam valve with e.s. focusing, **(A) 2363**
Skifter, H. R., and J. S. Prichard, aerial pattern measurement, **2727**
Slack, C. M., and L. F. Ehrke, high-speed radiography, **1715**
Slater, D., with C. F. Bays, hermetic sealing of transformers, **749**
Slaughter, R. J. H., with D. Maurice, f.m. reception, **2345**
Slaymaker, F. H., and W. F. Meeker, blind guidance by ultrasonics, **(A) 2578**
—— with L. L. Merrill, directional characteristics of clamped-edge disk, **3288**
Sleeper, M. B., f.m. television relay *vs* coaxial cable, **2370**; U.S.A. facsimile service possibilities, **268**
Slepyan, L. B., sensitivity of receivers, **3232**
Slichter, L. B., and E. C. Bullard, Frenkel's theory of geomagnetism, **(D) 104**
Sliškovic, J., miniature radio components and receivers, **1339**
Slonczowski, T., with others, airborne magnetometers, **220**
van Slooten, J., with P. Cornelius, improved diversity and directive broadcast reception, **255**
Slutsker, M. A., and M. A. Studitski, noise meter for broadcasting stations, **3189**
Slutskin, A. A., oscillation mechanism in multi-segment magnetron, **1839**
Smale, J. A., developments in point-to-point communication, **2358**
Smith, A. H., automatic a.f. phase reverser, **677**
Smith, C. B., with others, wide-range u.h.f. signal generators, **776**
Smith, C. E., standard reference aerials, **951**
—— and R. A. Fouty, circular-polarization f.m. aerial, **(A) 2443**
—— and E. M. Johnson, performance of short aerials, **651**
Smith, C. P., wide-band wobbulator, **1310**
Smith, E. H. Frost, magnetic amplifiers, **3359**
Smith, F. W., Jr, and M. C. Thienpont, l.v. high-current stabilized power supplies, **283**
Smith, H. R., and G. S. Gregory, film pickup system, **2945**
Smith, J. P., with others, barrier-grid storage c.r. tubes, **2986**
Smith, J. R., television field equipment, **2938**
Smith, J. S., loudspeaker damping, **(D) 938**
Smith, K. D., with J. F. Wentz, microwave television transmission system, **2653**
Smith, Newbern, with J. H. Dellinger, war-time work of I.R.P.L., **2049**
Smith, O. J. M., β ray thickness gauge for sheet steel, **497**; post-war engineering curriculum, **902**
Smith, P. H., cloverleaf aerial for f.m. broadcasting, **1272**
Smith, R. A., radar navigation, **1959**; Radio Aids to Navigation, **(B) 1048**
—— E. Franklin and F. B. Whiting, group velocity of radio waves in atmosphere, **1438**

Tiberio, U., signal/noise ratio, in l.f. amplifiers, **1320**, in oscillographic receivers, **2070**
Tickner, A. J., with others, airborne magnetometers, **220**
Tikhonov, A.N., with A. A. Samarski, excitation of waveguides, **3335**
Tillman, J. R., valve oscillator, **976**
Tillotson, L. C., with W. D. Lewis, branching filter for microwaves, **2216**
Tilton, E. P., 420-Mc/s transmitter and superregenerative receiver, **1509**
Timofeev, P. V., with V. V. Sorokina, shape of field for e.s. lenses, **2880**
Titterton, E. W., and V. L. Fitch, portable pulse generator, **2301**
Tkhorzhevski, O. A., and B. K. Shembel, synchronization of valve oscillator by a harmonic, **1308**
Todd, F. J., VOR aerial navigation system, **3123**
Todd, W., d.f. receiving system for meteorology, (**A**) **2524**
du Toit, S. J., anticoincidence and recording circuit, **1706**; self-quenching G-M counters, **3198**
Tolansky, S., and W. Bardsley, interferometry for study of quartz oscillations, **3400**
Tomasevich, O. F., with S. I. Pekar, thermionic emission from metals covered by semiconductor, **3391**
Tomkins, A. A., surgeless volume expansion, **2739**
Tomlin, G. M., with H. C. Turner, electrical technique in other industries, **1110**
Tomlin, S. G., principles of v.m., **893**
Tommasini, E., d.c. valve voltmeters, **2008**
Torrey, H. C., and C. A. Whitmer, (Eds), Crystal Rectifiers, (**B**) **2989**
Touraton, —, — Zwobada and — Dumousseau, wide-band amplifier valves for cm λ, **1834**
Tournier, M., growing of piezoelectric crystals, **1657**; physical properties and symmetry of crystals, **2811**
Toussaint, M., and A. Sev, synchronization of broadcasting networks, **260**
Touvay, G., with others, local sensitivity variations of photocells, **1814**
Townes, C H., microwave absorption of NH_3, (**A**) **407**
—— and F. R. Merritt, Stark effect in h.f. fields, **1344**
Townsend, G. B., with others, television receiver design, **1187**
Tranter, W. O., diffraction of e.m. waves, **2326**
Traub, E., with W. E. Bradley, Philco television projection, **295**, receiver, **512**
Tremellen, K. W., and J. W. Cox, wave propagation and s.w. communication, **2050**
Trestchenkoff, G., s.w. reception with commercial receiver, **523**
Triem, W. R., portable R/T for trains, **1164**
Trillat, J. J., and J. Barraud, measurement of peak voltages by electron diffraction, **165**
Trischka, J. W., with others, magnetic amplifiers, **664**
Troitski, V. S., use of c.r.o. to indicate bridge balance, **2011**
Trolese, L. G., with J. B. Smyth, radio propagation in lower troposphere, **801**
Trump, J. G., with others, e.s. generators, **3483**
Tuck, J. L., with others, 16-MeV betatron, **3482**
Tucker, B. A. C., with J. Dyson, contour plotter for directive aerials, **1864**
Tucker, D. G., analysis of ring and Cowan modulators, **3543**; design of balanced rectifier modulators, **3542**; performance criteria for pulse and television amplifiers, (**A**) **373**; rectifier resistance, exponential law, **1868**; synchrodyne receiver, **1138**, (**D**) **1139**, **1140**, design of, **525**; two-phase telecommunication system, **2912**
—— and J. Garlick, synchrodyne, refinements and extensions, **1733**
—— and J. F. Ridgway, design of synchrodyne receiver, **526**
—— with J. H. P. Draper, square-law circuit, **670**
Tucker, W. J., and R. S. Roberts, Plastics for Electrical and Radio Engineers, (**B**) **1066**
Tuckerman, B., magnetic screening by spherical shell, **705**
Tuller, W. G., bandwidth reduction in communication systems, (**A**) **2614**
—— and T. P. Cheatham, Jr, adjustable-bandwidth f.m. discriminator, **239**
—— W. C. Galloway and F. P. Zaffarano, frequency stabilization of microwave oscillators, **3055**
Turner, C., and others, Berkeley 4-MeV e.s. generator, (**A**) **2311**
Turner, H. C., and G. M. Tomlin, electrical technique in other industries, **1110**
Turner, L. A., with others, Radar Aids to Navigation, (**B**) **2255**
Turner, L. B., balanced 3000- and 10000-Mc/s calorimeters with tapered water loads, **2023**
Turner, R. J., with others, crystal oscillators, **2195**
Turner, R. P., pocket valve voltmeter, **1687**; 600-W R/T transmitter, **1199**
Turney, T. H., synchrodyne receiver, (**D**) **1139**
Tuthill, C. A., interpreting system at Lake Success, **637**
Tuttle, W. N., use of diode rectifiers for d.c. motor speed control, (**A**) **2574**
Tweedy, S. E., magnetic amplifiers, **1566**
Tyrrell, W. A., waveguide hybrids, **678, 2165**
—— with G. E. Mueller, polyrod aerials, **952**
Tyson, B. F., h.f. crystal voltmeter, **2284**
Tyzzer, F. G., and H. C. Hardy, felt as noise and vibration reducer, **929**
Tzu, H. Y., magnetic field of rotating bodies, **1633**
Ts'u, Y. K., with Chai Yeh, frequency deviation in reactance-valve f.m. circuits, **2751**

U

von Ubisch, H., hot-wire vacuum gauges, **436**
Uhlig, H. H., passivity in Cr-Fe alloys, **744**
Ullrich, E. H., and D. C. Rogers, measurement of receiver noise factor, **1743**
Underhill, E. M., permanent-magnet alloys, **1663**

Zhukova, P. N., and M. N. Mikheev, magnetic properties of Cr-Ni-Mo steel after heat treatments, **1975**
van der **Ziel, A.**, measurement of noise factors, **2860**; theory of plane diode, **2976**
—— with M. J. O. Strutt, compensation of shot effect in valves and circuits, **3358**; s.m. valves as u.h.f. pre-amplifiers, **1890**
Zimmermann, K. H., h.f. cable design, **1550**
Zinke, O., dielectric aerials, **3349**; exponential conductor as transformer, **372**; field-strength formula for long-wave propagation, **1448**; measurement of L, C and R by double potential divider, **1075**
Zucker, R. S., practical design of v.h.f. f.m. receivers, **245**
Zuhrt, H., Kirchhoff-Huyghens principle and e.m. radiation fields, **1624**
Zuvers, H. E., ignitrons in broadcast service, **2928**
Zwikker, C., sound absorption by porous materials, **3322**
—— J. van den Eijk and C. W. Kosten, sound absorption by porous materials, **3322**
—— with J. van den Eijk, sound absorption by porous materials, **3322**
—— with C. W. Kosten, absorption of sound, by compressible wall, **3321, 3323**, by porous rubber, **3324**
Zwobada, —, with others, wide-band amplifier valves for cm λ, **1834**
Zykov, I. V., aurora in Southern Siberia, **2245**

SUBJECT INDEX

SYMBOLS (A) Abstract, (B) Book Review, (C) Note of Correction, (D) Discussion

A

Abacs, for microwave relay calculations, **2891**; for oscillatory circuits of superheterodynes, **1473**; for pulse rise-time, **2492**; for resonant frequencies of cavities, **48**; for selectivity calculations, **1385**; for square-wave response of RC amplifier, **62**
Aberrations in lens and mirror systems, **2767**
Absorption (See also Ionosphere; Microwaves; Sound)
  acoustic, by compressible wall, **3321, 3323**
    measurement of, **2145**
    perforated facings for various materials, **981**
    by plywood panels, **2891**
    by porous materials, **2144, 3322**
    by porous rubber, **3324**
    by sheet of air bubbles, **2142**
    by slagwool cones, **6**
    by spheres and cylinders, **2120**
    by suspensions of particles, **(A)2119, 2685**
    use of Helmholtz resonators, **1232**
    by various materials, **928, 929, 3004**
  microwave, by air, **594**
    detection apparatus, **405**
    double-modulation detection method, **1017**
    measurement of, **708**
    of NH_3, **(A)90, 406, (A)407, 707, 1018, 1019, 3397**, collision broadening in, **3100**, pressure broadening in, **1916**
    by oxygen, **3398**
  spectra of ZnS and willemite, **3424**
  u.h.f., by salt solutions, **3098**
  ultrasonic, in air and other gases, **914**
    in fresh and in sea water, **(A)2124, (A)2125**
    in liquids, **3, 1532**
    theory of, **2774**
    in water, **4**
Acoustics (See also Absorption; Impedance; Sound; Ultrasonics)
  analogue of Sommerfeld's surface wave, **3287**
  applications, sonic airspeed indicator, **(A) 3486**
  architectural, of studios, **928, 930, 935, 3326**, and rooms, **(A) 2143**
  bibliography, **908, 1531, 2118, 2684, 3235**
  electroacoustic systems, transfer coefficients of, **325**
  end-corrections and harmonics of open organ pipes, **2126**
  engineering, elements of, **(B)1548**
  exponential horn design, **326**
  measurement of directivity factor, **(A)2131**
  signal analysis by filters, **2130**
  sound rooms, anechoic, **1231**, construction of, **6**
Aerials (See also Coupling; Transmission lines; Waveguides)
  aircraft, design of, **2457**
  broadcasting, **344**
    cloverleaf, f.m., **1272**
    directive, effect of circulating currents on efficiency, **(A)2443**
    reradiation from towers, **(A)2443**
  calculation of field over plane aperture, **2460**
  capacitance, for mains receivers, **1583**
  cathode-follower arrays, **2171**
  for circular polarization, **1560, 3343**
    helical, **1210**
  circularly and elliptically polarized, **(A)342**
  for citizens' band, **2456**
  for cm waves, **(A)31**
  coupled, theory of, **2450**
  current distribution in, **1558**
  cylindrical, with gap, **3026**
  dielectric losses of, **1274**
  dielectric rod, **3349, 3350**
  diffraction, circular, theory of, **1858**
    radiation and resistance of, **1269**
  dipole, λ/2, with tuned reflector, field of, **3027**
    field near horizon, **224, 1443**
    radiation impedance of, **(A) 1280**
  directive, basic design principles for, **2466**
    broadcasting, effect of circulating currents on efficiency, **(A)2443**
    comb, **2169**
    contour plotter for, **1864**
    design of, **958**
    effect of flanges on radiation patterns of small horns, **2468**
    high gain, for 144 Mc/s, **345**
    physical limitations of, **(A)2443**
    radiation patterns of, **3353**
    receiving, **2175**
  e.m. radiation formula for, **340**
  end-fire arrays, **1271**
  feeders for, efficiency at u.h.f., **349**, measurement of parameters, **1677**
  f.m., with circular polarization, **(A)2443**
    design theory, **955**
    radiation patterns by means of models, **2463**
  for f.m. receivers, **(A)237**
  gain and polar diagrams, **1861, (D)2461**
  ground-plane, design of, **1262**
  horn, with medium-sized aperture, **2453**
  inductive coupling of, **953, 2733**
  invention of, **(D)1218, 1219**
  loop, **3354**
    circular, with non-uniform current distribution, **34**
    coupling transformers for, **354**
    receiving, current calculation, **33**
  maximum directivity of, **2731, (D)3031**
  microwave, **2459**
    analysis of, **656**
    measurements on, **1281**
    parabolic, design of, **657**
    polar diagram plotter for, **32**
    power gain of, **3352**
    theory of linear arrays, **2452**
  mutual impedance of, **658, 2174**
  omnidirectional, high-gain, for circularly polarized radiation, **(A)2443**
    R.C.A. pylon, **2454**
    stacked-V, **2170**
    for 50 Mc/s, **655**
  open, partially-screened, **(D)659**
  optimum current distribution in, **2730**
  parabolic, feed systems for, **657**
  paraboloid, design of, **2448**
    waveguide-fed, elimination of standing waves, **2469**
  parasitic, tuning of, **652**
  polar diagram of, automatic recorder for, **1400**
    with flat earth and screen, **2462**
    and gain, **1861, (D)2461**
    measurement, **32, 2727**, using models, **1276, 2463, 3353**
  polyrod, **652, 1859, 2449**
  radiation resistance of, **1862, 2451, 2729, 3030**
    in infinite array or waveguide, **(A)2443**
  receiving, induced voltage in, **1268**
    large, advantages of, **28**
    short, design of, **2726**
  reference, standard, **951**
  reflector, for wide angle scanning at cm λ, **(A)2443**
  and reflectors, coupling between, **1273**
  rhombic, **2464**
    design of, **1863**
  ring, radiation resistance of, **1862**
    resonant slot in waveguide, **3021**
  rotary, for 10 m and 20 m, **1277**
  series-loaded mast radiators, **3342**
  short, performance of, **651**
    in dielectric media, **3351**
    limitations of, **1261**
    radiation from, **3348**
  slot, **343, 1263, 1265, 3344**
    in corner reflectors, **2467**
    λ/2, centre-fed, field near, **3345**, input impedance of, **3346**
    omnidirectional, for cm λ, **957**
    with spindle-shaped radiation diagram, **1561**
    theory of, **1264, 1266**
  straight wire, polar diagrams for, **25**
  television, **(D) 958**
    all-wave, f.m., **1180**
    biconical, **839**
    close-spaced arrays, **(D)29**
    Farnsfield, **2093**
    WABD, **30**
    WTTG, **853**
    wide range, dual-band, **3347**
  theory of, **341**
    effect of finite gap, **24**
    use of Fourier transforms, **155, 1069, 2270, 3159**
  thin, reactance of, **346**
  top-loaded, **1278**
  tower, for broadcasting, **26**
  transmitting and receiving properties of, **3023**
  vertical, impedance over finite ground planes, **(A)2443**
    λ/4, impedance of, **2173**
    mutual impedance of, **658**
  v.h.f., for naval communications, **3341**
    for short-distance communication, **3340**
    vertically polarized, **1279**
  wide-band, helical-beam, **(A)2443**
  Yagi, for 600 Mc/s, **2458**
Alloys (See also Ferromagnetic materials; Magnetic materials; and individual substances)
  binary, ferromagnetism of, **1974**
  Cr-Fe, passivity in, **744**
  Cu-Ni, **1064**
  electrical and physical properties of, **3150**
  ferromagnetic, temperature changes during magnetization of, **2804**
  Mn-Sb, resistance variation of, **2830**
  Ni-Fe, magnetic anisotropy in, **3428**
  permanent-magnet, data for, **1663**
Alternators, inductor, h.f., **1172**
Ammeters, a.c., polar, **1084**

    v.h.f., **66**
  triode, cathode-coupled, charts for, **995**
  u.h.f., theory of, **379**
    use of v.m. valves for, **1890**
  with variable bandwidth, **60**
  video, transient response of, (**A**)**2475**
  wide-band, (**A**)**378**
    design of, **1889**, **2753**
    with distributed amplification, (**A**)**2475**, **3375**
    power, **2754**
    for 550 Mc/s, **692**
  for wire recorder, **2155**
  6AS7G, general-purpose, **2756**, high quality, **2755**
  using 6L6G, **2202**
Analogies, electromechanical, **1865**
    and electroacoustical, (**B**)**2159**
Analysers, electronic, for aircraft engines, **2310**
  heterodyne, with polyphase search voltage, **2013**
  l.f., **1403**
  network, a.c., **961**
    for study of e.m. fields, (**A**)**2475**
  panoramic, for receiver alignment, **1096**
  spectrum, r.f., wide-range double-heterodyne, **769**
Analytical signal, theory and applications of, **1293**
Astronomy, recent developments in, **2227**
Atmosphere (See also Sound propagation; Wave propagation, e.m.)
  conductivity of, principles of measurement of, **2556**
  with frequency-dependent absorption, **1638**
  lower, ionic equilibrium of, **2792**
    reflections from, (**D**)**722**
    refractive index measurement, errors in, **1941**
    transmission curve at 1–5μ, **3098**
    wind distribution in, **1033**
    zonal currents outside the tropics, **3120**
  standard, radio, **2045**
  tidal motions in, resonance theory of, **1938**
  upper, distribution of O and O_2, **418**
    excitation conditions in, **1359**
    research with V-2 rockets, **1427**
    twilight observations of, **3114**
Atmospheric electricity (See also Ceraunometer; Clouds; Electrostatic field; Lightning; Potential gradient; Thunderstorms)
  discharge currents in balloon cables, **1034**
Atmospherics, direction finder for, **3122**
  directional observations at sunset, **1363**
  fine structure of, **2519**, **2520**
  origin of certain types of, **2521**
  range corresponding to recorder threshold, **3504**
  tail component, propagation of, **2888**
Atomic energy, health problems, (**A**)**2677**
Attenuation, acoustic, in multiple partitions, (**A**) **2141**
  anomalous, in waveguides, **2446**
  of cm waves by rain etc., **2062**, **2332**
  of 200-Mc/s signals by rocks, **3476**
  standard, microwave, (**A**)**2443**
Attenuators, cavity, theory and design of, **2762**
  for waveguides, **1892**
Audience-measurement, radio, instantaneous, (**A**)**2430**
Aurora australis, notes on, **1953**
  and ionosphere perturbations, **421**
  and ionospheric layer, **2243**
  and night-sky light, **730**

  war-time development of, 1900
Conductivity, electronic, of non-metals, 84
  of metals at u.h.f., 167, 1345, (D)2768
Conductivity meter, for h.f. loss measurement, 3461
Conductors, printed, on glass, (A)1614, physical properties of, (A)1614
Conferences and conventions, electron microscope, Leeds, 1947, 1713, 3208; F.C.C., television links, 298; I.E.E., scientific radio, 3282; I.E.E., servomechanisms, (A)829; I.E.E., radiocommunication, bibliography of supporting papers, 2112; International Telecommunications, Atlantic City, 1748, 1749, 2357; I.R.E. National, 1948, 2677; meteors, Manchester, 1947, 93; National Association of Broadcasters, 1947, 1504; oxide cathodes, London, June 1947, 2974; radio aids to marine navigation, New York and New London, April–May 1947, 2247; scientific information, Cambridge, 1214; U.R.S.I.–I.R.E., Washington, Oct. 1947, 2113; work of U.R.S.I. and C.C.I.R., 3281
Consoles, studio-control, C.B.S., 3241
Contact potential, in diodes, for negative bias, 353
  metal/semiconductor, 1381
—— **resistance**, silicon/metal, 2537
Contacts, atmospheric corrosion of, 3435
  effect of surface films on, 2769
  semiconductor, excess-defect, 443
Control, (See also Amplidyne; Frequency control; Servomechanisms; Telecontrol)
  automatic, of furnace temperature, 791, 1114
    in radar receivers, 808
    of ship's course, by magnetometer, 499
    theory of, 498, and radiophysics, 402
    of volume, as feedback problem, 2501
  crystal, multichannel, of superheterodyne receiver, 2342
  electronic, of a.c. motors, 784, of d.c. motors, (A)2574, 2580
  heater, in vacuum furnace, 2581
  process, by bridge unbalance, 668
  register, in printing, 789
—— **systems**, for transmitters, 849
Converters (See also Frequency converters)
  cathode-coupled, 240
  crystal-controlled, broad-band, 10-m, 1471
  for microwaves, 663
  power, vibratory, 277
  for use with R.1155 on λ 5–10 m, 1148
  weak signal, design for 28 Mc/s, 1485
Copper, and copper alloys, 1664
Cores, a. c. auxiliary magnetization of, 2507
  iron-alloy, h.f. properties of, 754
  magnetic, laminated, effects of overlapping joints, 1978
  powdered-iron, ring, permeability measurement, 471
Corona, correction on small bushings, (A)145, point-to-plane, (A)2286
Corrosion, of contacts by atmosphere, 3435
Cosmic noise, r.f., from constellation of Cygnus, 2514
  from galaxy, 95
    and D-layer ionization, 413
    at m λ, 1626
    at 60 Mc/s, 2515
    at 64 Mc/s, 1926
  from sky, at 3000 Mc/s, 721
  and telecommunications, 2777, 3102
  at 25 and 110 Mc/s, 2510
Cosmic rays (See also Mesons)
  bursts and showers, 416; effect of magnetic field of Milky Way, 100; effect of magnetic storm of 1st March 1941, 3113; latitude effect, 714; origin and properties of, 2787; solar effects, (A)109; 27-day period of, 716
Counters, decade-ring, 2184
  electronic, direct-reading indicators for, 2307, and frequency standards, 482, and sorting devices, (A)2574
  G-M, 2870
    adjustable, 2578
    analysis of impulses from, 1708
    with beaded wires, 494
    β-ray, for thickness measurement of sheet steel, 497
    characteristics and uses of, 2579
    CO_2-filled, 783
    coincidence counting with, 3199
    determination of dead- and recovery-time, (A)2574
    discharge characteristics of, (A)2308
    discharge-spread in, 1103
    experiments with, 2032
    He-filled, 3474
    measurement of efficiency, 496
    metal, design of, 1102
    photoelectric thresholds of, 1707
    recovery time of, 2309
    reduction of insensitive time in, 1425
    resolving power of, 1424
    resolving time and coincidence loss for, 2034
    rise of wire potential in, 196
    self-quenching, 3198, discharge mechanism in, 495, halogen-filled, 3197, photoelectric effect in, 2083
    short time delays in, 2576
  high-speed coincidence circuit, 1571
  nonsymmetrical, 2577
  n-scale, high-speed, 2186
  parallel-plate, 3200
  particle, electron-multiplier type, 1106
  photon, characteristic curves of, 1021
  photon and particle, 1423
  pulse, Model-200, 1105
  scale-of-10, 1705; scale-of-16, 2185; scale-of-100, 2306
  selective detector for charged particles, (A)2574
  statistical analysis of data, 462
  stepping, megacycle-rate, (A)2574, 3477
  use of diamonds, (A)2575
Couplers, directional, theory of, 675, for waveguides, 1855
Coupling, inductive, abac for efficiency, 974; of valves at u.h.f., 993
Crystallography, Fourier transforms and structure factors, (B)2369
Crystals (See also Piezoelectricity; Quartz)
  EDT, production of, 739
  filter, with low self-inductance, 388, 3072
  physical properties and symmetry of, 2811
  piezoelectric, determination of cuts by X rays, 144
  quartz, EDT and DKT, 3133
  rectifier, for variable time-constants, 371
Current distribution on aircraft structures, (A)2552
  and potential, significance at v.h.f., 3396
Currents, on conducting plane, due to parallel dipole, 1910
  direct, small, measurement of, 164, 1678
Cyclophon, beam-switching tube, 883, use for p.m., 1406
Cyclotrons See Particle accelerators

D

Delay lines, Hg, 673
    as computer memory, (A)2475
    theory of, 3367
  phase-corrected, (A)2475
  ultrasonic, 3479, solid, 1578
Demodulation, selective, (D)686, time, 807
Depth sounding, modern equipment for, 2127
Detection, static-free systems, (A)2596
  u.h.f., 1474
Detectors, crystal, and semiconductors, theory of, 87, Si, 3069
  f.m., 1475, (A)2475, 2343, fremodyne, 2065, 2339, (A)2596, using frequency-counting circuits, 3235
  frequency, (A)237
  ratio, 348, for a.m./f.m. reception, 2344, for f.m. receivers, 2346, improved, 1476
Diamonds, as amplifiers, 2757, as counters, (A)2575, 3399
Diathermy, s.w., apparatus for, 1408
Dictionary, technical, English-French-German, (B)906
Dielectric constant, of $BaTiO_3$ crystals, 2540
  of ceramics at cm λ, 2541
  and loss angle, measurement by plate method, 3169
  measurement, using cavity resonators, 173, 1995
    at cm λ, 1994
    for liquids, using special capacitor, 2554
    pulse methods, 1671
  of polar liquids at cm λ, 1991
  of solid dielectrics at cm λ, 1993
—— **loss**, 2821
  u.h.f., formulae for, 2344, measurement of, 765
—— **properties** (See also Insulating materials and cross references)
  of aqueous salt solution, 1915
  of $BaTiO_3$ crystals, 127
  of $BaTiO_3/SrTiO_3$ mixtures, 446
  h.f., measurement of, 172
  of ice, 1077
  of liquids for λ 9.4–50 cm, 1992
  of Rochelle-type crystals, 438
  of soil and water at cm λ, 2546
  of various liquids at h.f., 79
  of water and heavy water, 2508
  of water at cm λ, 1912, 1913, 1914
Dielectrics, ceramic, titanate, residual effects in, 2263
  rubber, accelerated aging tests, 3145
  solid, power factor and permittivity, 1060, temperature coefficient of, 1069
  synthetic, vacuum properties, (A)122, 3144
Differential analyser, electrical, 1070
  for plotting electron trajectories, 2408
Diffraction (See also Electromagnetic theory)
  at aperture in metal sheet, 3097
  by black screens, e.m. theory of, 3096
  and Huyghens' principle, 1618
  new formula for, 3095
  theory, singularities at sharp edges, 2772
  ultrasonic, by apertures and obstacles, 3297
Diffusion, of spherical waves in dispersive medium, 1617
Direction finders, for atmospherics, 3122
  H-Adcock, design of, 2528
  h.f., Marconi Type DFG28, 2796
  instant-reading, 2526
  for meteorological use, (A)2524
  spaced-collector, errors in, 424
  for storm location, 2527
—— **finding**, (B)1047
  aerial balancing and radiogoniometer design, 2246
  h.f., fundamental problems in, 1955
  naval, 1956
  stations in Angola, 2628
Directories, of scientific personnel and organizations, British, (B)1527, French, (B)2674, (C)3571
Discharge (See also Corona)
  arc, high-current, theory of, 3086, low-pressure, oscillations in, 1347, 1348
  electrical, through gases, 397
  gas, dynamic characteristics of probes, 3387
    h.f., starting potential of, 1906, theory of, 1902, 1903, 1904, 1905
    high-pressure, influence of cooling, 2226
    low-pressure, 398
  glow, Ne, with Mo cathode, 2770
    Hg-vapour, high-pressure, 399
    spark, mechanism of, 3388
—— **currents**, in kite-balloon cables, 1034
Discriminator, f.m., with adjustable bandwidth, 239
Dispersion, ferromagnetic, mechanism of, 1054
Displacement measurement, variable capacitor for, 200
Distortion, analysis, 2855
  bias-field, in magnetic tape recording, (A)2430
  delay, in microwave repeaters, 2859
  intermodulation, in disk recording and reproduction, 630, measurement with c.r.o., 947, meter for, 2858
  in light modulation by ultrasonic cell, 3000
  measurement, analysis of intermodulation method, 2553
  meter, 191
  network, of f.m. signals, 1294, 1886
  nonlinear, in low-frequency transformers, 3035, summation for, 2071
  in nonmetallic resistors, 3362
  phase, in audio systems, (A)2430, sensitivity of ear to, 1547
  phase and amplitude, in linear networks, 1901, (C)2764
  in pulse-code modulation, (A)2281
  in speech and music transmission, (AD)2149
  telegraph, B.B.C. measurement set, 2857
  of ultrasonic waves, 2999
Documentation, auxiliary publication of scientific papers, 2423
Doppler effect, formulae in ellipsoidal theory of special relativity, 2591, use for aircraft speed measurement, 782

E

Ear, degree of resonance of, 8; conducting material of, 2135; sensitivity to phase distortion, 1547; spiral of cochlea, (A)3311
Earth resistances, h.v. characteristics of, 1962
Earthing, of lightning conductors, h.f. testing, 688
  problems of, 2825
  and soil resistance, 1063

Vibrators, for conversion of d.c. to a.c., 1168
  servicing methods for, 2379
Vocoder, for long-distance telephony, 2911
Voltage measurement, at cm λ, 2007
  peak, measurement by electron diffraction, 165
    measurement at 600 Mc/s, 2286
Voltages, out-of-phase, generation of, 2738
Volt-ammeters, d.c., 2572
Voltmeters, a.c., diode, 767
  crystal, h.f., 2284
  diode, impulse response of, 2736
  electronic, a.c./d.c., multi-range, 1100
  ellipsoid, for high a.c. voltages, (C)478, (D)2849
  loading of, abac for, 766
  stable, 2847
  tetrode, for high negative voltages, 2285
  valve, 477, (D)1066, 2572
    bridge balanced amplifiers for, 2494
    d.c., 2008, with amplifier, 3178
    inverted, 2848
    pocket, 1687
Voltohmmeter, 1686
Volume expansion, surgeless, 2739

W

Watches, rate measurement, 1669, with c.r.o., 2838
Water, dielectric properties at cm λ, 1912, 1913, 1914
  vapour, dielectric properties at u.h.f., 1996
Wattmeters, calorimeter, u.h.f., coaxial load for, 174
  microwave, sources of error in, 3466
Wave mechanics, frequency and phase velocity of plane wave, 76
—— **propagation** (See also Acoustics; Sound)

acoustic, along boundary, [illegible]

Waveform, trapezoidal, with minimal noise factor, 2470
—— **analysis**, at low a.f., using c.r. tube, 5
for a.f. transients, (A)2552
c.r. equipment for, 479, (D)480
for modulated light beam, 1087
potentiometer method, 3171
of pulse-lengthener output, 667
Waveguides, admittance matching with irises, 649
anomalous attenuation in, 2446
attenuators for, 1892
broad-band junctions with coaxial lines, 335
and cavity resonators, transient state in, 3019
circular, with coaxial dielectrics, field components of, 22
cylindrical, propagation in, 334, 1554, 1555, 2723
design data, (B)3545
diaphragms in, propagation through, 1252
directional couplers for, 1855, (D)2719
discontinuities in, 3020
disk-loaded, theory of, 1253
effect of junctions on field in, 3018
excitation of, 3334, 3335
H waves near limiting frequency, 333
hybrid junctions for, 2163, 2165
hybrid rings for microwaves, (A)2443
light-weight, 755
losses in, calculation of, 949
and microwaves, (B)1564
nearly circular, propagation in, 2724
non-metallic, fields in, (A)2443
open-ended, plane, 3336, 3337
oval, properties and applications of, 2720
perturbation propagation in, 2447
phase-changer for, 1255
principles and practice of, (B)350
propagation in, 1251, 1719
properties of, 2445
with radiating slits, 2164
rectangular, attenuation of H_{10} waves, 3016
equivalent circuit of bend in, 648
excitation through slot, 3017
geometry of, 2722
matrix theory for reflections from circular bends, 2721
ridge, geometry for, (A)2443, properties of, 23
ring resonant slot in, 3021
standing-wave indicators for, 3468
test gear for, 1417
theory for plane waves, 1553
transmitter-blocker cells for cm waves, 1768
u.h.f. modulation in, 54
λ/4-coupled filters for, 1000
Wavemeters, for cm λ, 3465
absorption, for dm λ, 3464
for 120–500 Mc/s, 1692
for 250–850 Mc/s, 1691
cm-λ, direct reading, 2018, 2293
microwave, calibration of, 485
resonance, for 10000–25000 Mc/s, 2019
sensitive, 186
Waves, e.m., diffraction of, 2326
and electrons, interaction of, 3093
interaction of, 3219
magneto-ionic splitting, by E layer, 2051
triple, by F layer, 2595, 3222, in polar regions, 2594, 3221
of phase velocity *c*, structure of, 2718
spherical, theory of, 3094
u.h.f., properties and applications of, 1911
velocity of, 1720
measurement, in atmosphere, 1438, by cavity resonator, 3488, over land at 100 kc/s, 1440, over sea water for cm λ, 1441
Whistles, h.f., and edge tones and resonance, (A)2129
Wire, enamelled, test apparatus for, 1676
Wobbulator, wide-band, 1310

X

X-ray applications, study of surface layers, 1055, thickness gauge, 2302
—— **tubes**, with line focus, 217
rotating-anode, peristron, 3485
X rays, image-intensification tube for, 3562
recent progress in production of, 2876

ERRATA

In "Abstracts and References" throughout the year.

Abstract No.	159	U.D.C. should read 621.314.3† : 518.5
,, ,,	489	Cancel initial M before Chamagne
,, ,,	602	For A. Doehler read O. Doehler
,, ,,	1194	For S. Royer read J. Royer
,, ,,	1388	For Kilomiets read Kolomiets
,, ,,	2303	For J. J. Hickey read J. S. Hickey
,, ,,	2371	U.D.C. should read 621.396.7
,, ,,	2698	For L. Camp read L. W. Camp
,, ,,	2865	For " Volume 2 of the Radiation Laboratory series " read " Volume 11 . . ."
,, ,,	2963	For " noise factor " read " distortion " in both text and title, and delete comma after " anode current " in title
,, ,,	3501	U.D.C. should read 621.396.021

LIST OF JOURNALS

A selection of the journals which are regularly scanned is given below, together with the addresses of publishers or editorial offices and the abbreviations of titles as used in the Abstracts and References. Applications for copies of any journal should be made to the addresses given.

The full title of each journal is given first and is followed by the address, the abbreviated title being shown within parentheses. In a few cases the nature of a journal is indicated, where neither the title nor the address shows it clearly.

A

Alta Frequenza, Associazione Elettrotecnica Italiana, Torino (116), Corso Massimo d' Azeglio, 42, Italy. (*Alta Frequenza*)

American Journal of Roentgenology, Charles C. Thomas, Springfield, Illinois, U.S.A. (*Amer. J. Roentgenol.*)

American Journal of Science, New Haven, Connecticut, U.S.A. (*Amer. J. Sci.*)

Annales de Géophysique, 165, rue de Sèvres, Paris XV^e^, France. (*Ann. Géophys.*)

Annales de Physique, Masson & Cie, 120, Boulevard Saint-Germain, Paris VI^e^, France. (*Ann. Phys., Paris*)

Annales de Radioélectricité, 98 bis, Boulevard Hausmann, Paris VIII^e^, France. (*Ann. Radioélect.*)

Applied Scientific Research, Martinus Nijhoff, The Hague, Holland. (*Appl. sci. Res.*)

Archiv der elektrischen Übertragung, Dieterich'sche Verlagsbuchhandlung, Inh. W. Klemm, Wiesbaden, Spiegelgasse 9, Germany. (*Arch. elekt. Ubertragung*)

Archiv für technisches Messen, Ernst Ludwig Buchhandlung, München, Karlsplatz 7, Germany. (*Arch. tech. Messen*)

Arkiv för Matematik Astronomi och Fysik, published for Royal Swedish Academy of Sciences by Almqvist & Wiksells Boktryckeri A.-B., Stockholm, Sweden. (*Ark. Mat. Astr. Fys.*)

A.S.T.M. Bulletin, Journal of the American Society for Testing Materials; 20th and Northampton Streets, Easton, Pennsylvania, U.S.A. (*A.S.T.M. Bull.*)

Astrophysical Journal, The University of Chicago Press, Chicago 37, Illinois, U.S.A. (*Astrophys. J.*)

Audio Engineering (formerly **Radio**), Radio Magazines, Inc., 28, Renne Avenue, Pittsfield, Massachusetts, U.S.A. (*Audio Engng, N.Y.*)

Australian Journal of Instrument Technology, 414, Collins St., Melbourne, Australia. (*Aust. J. Instrum. Tech.*)

Avtomatika i Telemekhanika, Academy of Sciences, U.S.S.R. (*Avtomatika i Telemekhanika*)

A.W.A. Technical Review, Amalgamated Wireless (Australasia), Ltd., Sydney, Australia. (*A.W.A. tech. Rev.*)

B

B.B.C. Quarterly, The British Broadcasting Corporation, The Grammar School, Searle Road, Wembley, Middlesex, England. (*B.B.C. Quart.*)

Beama Journal, The British Electrical and Allied Manufacturers' Association (Inc.), 36, Kingsway, London, W.C.2, England. (*Beama J.*)

Bell Laboratories Record, 463, West Street, New York 14, N.Y., U.S.A. (*Bell Lab. Rec.*)

Bell System Technical Journal, American Telephone and Telegraph Company, 195, Broadway, New York, N.Y., U.S.A. (*Bell Syst. tech. J.*)

British Journal of Radiology, 32, Welbeck St., London, W.1, England. (*Brit. J. Radiol.*)

British Medical Journal, British Medical Association, Tavistock Square, London, W.C.1, England. (*Brit. med. J.*)

British Standards Institution Monthly Information Sheet, 24/28, Victoria Street, London, S.W.1, England. (*Brit. Stand. Instn Mon. Inform. Sheet*)

Brown Boveri Review, Artillery Mansions, 75, Victoria Street, London, S.W.1, England. (*Brown Boveri Rev.*)

Bulletin de l'Académie des Sciences de l'U.R.S.S., (a) **série physique,** (b) **série géographique et géophysique,** (c) **classe sciences techniques,** Academy of Sciences, U.S.S.R. (*Bull. Acad. Sci. U.R.S.S., (a) sér. phys., (b) sér. géogr. géophys,* (In Russian.) *(c) tech. Sci.*)

Bulletin of the American Meteorological Society, Prince and Lemon Streets, Lancaster, Pennsylvania. (*Bull. Amer. met. Soc.*)

Bulletin de l'École polytechnique de Jassy, M. le Prof. D.I. Mangeron, Directeur du Séminaire Mathématique de l'École Polytechnique de Jassy, Jassy—Iasi, Roumania. (*Bull. Éc. polyt. Jassy*)

Bulletin Scientifique de l'Association des Ingénieurs Électriciens Sortis de l'Institut Électrotechnique Montefiore, Rue Saint-Gilles, 31, Liège, Belgium. (*Bull. sci. Ass. Inst. Montefiore*)

Bulletin de la Société française des Électriciens, 8–14, Avenue Pierre-Larousse, Malakoff (Seine), France. (*Bull. Soc. franç. Élect.*)

C

CQ, Radio Magazines, Inc., 342, Madison Avenue, New York 17, N.Y., U.S.A. (*CQ*)

Câbles et Transmission, Société mixte pour le développement de la technique des télécommunications sur câbles, 20, Avenue de Ségur, Paris VII^e^, France. (*Câbles & Transmission, Paris*)

Canadian Journal of Research (Sections A, B, and F), National Research Council, Ottawa, Canada. (*Canad. J. Res.*)

Chalmers tekniska Högskolas Handlingar, (Transactions of Chalmers University of Technology), N. J. Gumperts Bokhandel, Göteborg, Sweden. (*Chalmers tekn. Högsk. Handl.*)

Chinese Journal of Physics, J. S. Wang (Ed.), Department of Physics, National Tsing Hua University, Peiping, China. (*Chin. J. Phys.*)

Communications, Bryan Davis Publishing Co. Inc., 52, Vanderbilt Avenue, New York 17, N.Y., U.S.A. (*Communications*)

Comptes Rendus Hebdomadaires des Séances de l'Académie des Sciences, Gauthier-Villars, Quai des Grands-Augustins, Paris. (*C. R. Acad. Sci., Paris*)

Comptes Rendus (Doklady) de l'Académie des Sciences de l'U.R.S.S., Academy of Sciences, Moscow, U.S.S.R. (In Russian.) (*C. R. Acad. Sci. U.R.S.S.*)

Current Science, The Current Science Association, Bangalore, S. India. (*Curr. Sci.*)

D

Distribution of Electricity, 51/53, Hatton Garden, London, E.C.1, England. (*Distrib. Elect.*)

E

Electrical Communication, International Telephone and Telegraph Corporation, 67, Broad Street, New York 4, N.Y., U.S.A. (*Elect. Commun.*)

Electrical Engineering, Journal of the American Institute of Electrical Engineers; 20th and Northampton Streets, Easton, Pennsylvania, U.S.A. (*Elect. Engng, N.Y.*)

Electrical Review, Dorset House, Stamford Street, London, S.E.1, England. (*Elect. Rev., Lond.*)

Electrical Times, Sardinia House, Sardinia Street, London, W.C.2, England. (*Elect. Times*)

Electrician, Bouverie House, 154, Fleet Street, London, E.C.4, England. (*Electrician*)

Electronic Engineering, 28, Essex St., Strand, London, W.C.2, England. (*Electronic Engng*)

Electronic Industries, Caldwell-Clements Inc., 480, Lexington Avenue, New York 17, N.Y., U.S.A. (*Electronic Industr.*)

Electronics, 99–129, North Broadway, Albany 1, N.Y., U.S.A. (*Electronics*)

Electrotechnics, Indian Institute of Science, Bangalore, S. India. (*Electrotechnics*)

Das Elektron, Ing. Hugo Kirnbauer (Ed.), Linz, Landstrasse 9, Austria. (*Elektron, Linz*)

Das Elektron in Wissenschaft und Technik, Gustav Büscher (Ed.), Hanns Reich Verlag, München 23, Martinsstrasse 8, Germany. (*Elektron Wiss. Tech.*)

Elektrotechnik (Wissenschaftliche Zeitschrift für die Gesamte Elektrotechnik), Berlin, N.W.7, Dorotheenstrasse 41, Germany. (*Elektrotechnik, Berlin*)

Elektrotechnik und Maschinenbau, Elektrotechnischer Verein Österreichs, Springer Verlag, Wien I, Mölkerbastei 5, Austria. (*Elektrotech. u. Maschinenb.*)

Elektrotechnika, Official organ of the Hungarian Electrotechnical Associa-

tion Budapest V, Honvéd-utca 22, Hungary. (*Elektrotechnika, Budapest*)

Section IV—1949

Index to

Abstracts and References

This section contains an index, listed separately by author and by subject, for all Abstracts and References published in PROCEEDINGS OF THE IRE from February, 1949, through January, 1950.

AUTHOR INDEX

AUTHOR INDEX—A name followed by "and" is that of the first author of a jointly written paper, while the word "with" indicates that the name indexed is that of the second author.

A

Abele, M., energy of passive linear 2-pole network in transient regime, **3079**; propagation in dielectric waveguides of circular section, **1287**; solution of Maxwell's equations for field in cavity resonator, [illegible]
—— and C. M. Garelli, rectangular waveguides with several dielectrics, [illegible]
Abelès, F., e.m. wave propagation in stratified media, **818, 2604, 2893**
Aberdam, H., dielectric aerials, **3345**; wide-band matching by means of several intermediate elements, **665**
Abraham, L. G., and others, pulse echo measurements on cables, **790**
Acker, J. T., oxide-cathode core-material tests, **2674**
Adam, M., Dictionnaire de Radiotechnique, **(B)599**; recent trends in radio technique, **2199**
Adams, M. B., and D. K. Reynolds, converters for u.h.f. television reception, [illegible]
Adams, O., stresses in 2-wire glass/metal seals, **113**
Adams, P. R., performance criteria for localizer and glide-slope ground installation, **(A)1672**
—— with others, review of radio navigation aids, **1399**
Adams, R. J., and K. S. Kelleher, diffraction pattern for elliptical aperture, **(A)1578**
Adams, R. T., with others, v.h.f. airborne navigational equipment, **(A)1672**
Adcock, M. D., with A. S. Dunbar, gain of horn aerials, **1866**
—— with A. E. Marston, theory of end-fire helical aerials, **(A)1578**
Adorian, P., television distribution over short lines, **2339**
Agnew, W. B. R., moisture-sealing compound, **2813**
Aigrain, P. R., and E. M. Williams, design of amplifiers for optimum transient response, **3104**; network synthesis for desired transient response, **3360**; theory of amplitude-stabilized oscillators, **44**
Aiken, H. H., Mark III computer, **(A)1703**
Aikens, A. J., and L. Y. Lacy, test of 450-Mc/s urban-area transmission, **(A)1757**
Aisberg, E., transistron, French analogue of transistor, **2978**
Akeley, E. S., with P. Feuer, scattering by resonant ring in circular waveguide, **640**
Albanese, L., with P. Schiaffino, coaxial cables, **3084**
Albers-Schoenberg, E., and W. Soyck, dielectric properties of MgTiO, ceramics, **1414**
Albersheim, W. J., TE_{01} waves in curved waveguides, **2430**
Albert, G. E., and J. L. Synge, general problem of aerial radiation, **1859**
Alderton, G., with S. S. Carlisle, temperature coefficient of sensitivity of PbS photocells, **2369**
Aldrich, D. F., with E. M. Williams, speed of electronic switching circuits, **(A)1612**
Alekhin, E. A., earthing devices for communication equipment, **1197**
Alexander, F. W., broadcasting of orchestral music, **3319**
Alexander, J. W., calculations for circuits with f.m. voltages, **1883**
Alfvén, H., theory and applications of trochotrons, **2083**
Alixant, M., h.v. supply without transformer, **1199**; modern loudspeaker technique, **1855**; new radio components in world market, **2770**
Alkemade, C. T. J., with others, a.c. galvanometer, **3199**
Allan, H. R., and C. D. Curling, reflectometer, **1729**; resonant-cavity wavemeters for pulsed transmitters, **1130**
Allan, R., electrical engineering in tropics, **739**
Allen, C. W., critical frequencies, sunspots, and solar ultraviolet radiation, **1051**
Allen, E. W., Jr, propagation aspects of v.h.f. television, **(A)1757**; reflection of v.h.f. waves from meteoric ionization, **(D)489**; u.h.f. propagation characteristics, **3240**
Alma, G., and F. Prakke, rimlock miniature valves, **2080**
Alpers, E., with T. Gast, dielectric measurements by balance methods, [illegible]
Al'pert, Ya. L., formation and mechanism of ionosphere layers, **1380**
van Alphen, P. M., and H. Rinia, projection-television receiver optical system, **1215**
—— with H. Rinia, correction plates for Schmidt optical systems, **63**
—— with others, home projection television, **3275**
Alred, R. V., and A. Reiss, logarithmic anti-clutter radar receiver, **1172**
Alsberg, D. A., and D. Leed, phase and insertion-loss measurement for video frequencies, **2836**
Amble, O., connection for Bush integrators, **1108**
Ament, W. S., with C. L. Pekeris, microwave propagation in refracting atmosphere, **479**
—— with R. J. Urick, propagation of sound in composite media, **2686**
Ames, M. E., wide-range deviable oscillator, **2177, 2478**
Amos, S. W., output voltage of valves with resistive loads, **2084**
Anan'ev, P. V., channels of equal acoustic quality in wire broadcasting, **2424**
Andersen, W. M. A., with F. A. Metz, Jr, improved ultrasonic delay lines, **2747**
Anderson, E., with others, determination of aircraft ground speed using pulse-Doppler radar, **(A)1672**
Anderson, N., and S. Pakswer, comparison of PbS photocells with photoemissive cells, **1537**
Anderson, N. S., with others, attenuation of sound in fog and smoke, [illegible]
Anderson, R. E., 500–50000-V d.c. power supply, **2643**
Andrews, A. H., radar in U.S. ships, **(A)2803**
Andrews, D. H., with J. V. Lebacqz, r.f. properties of CbN, **2531**
Andrews, H. L., detection and measurement of nuclear radiation, **(A)1639**
Andrews, P., spectrometer for $\lambda = 10$ cm, with mechanical sweep, **2855**
Angel, Y., new colour-television system, **(A)871**; 1948 Paris television congress, **866**
Anon.,
  A.A. McK., direct-reading a.f. meter, **2272**
  "Cathode Ray", f.m., **216**; Miller effect, **3076**; negative feedback in amplifiers, **2197, (C)2767**; negative frequency, **24**; parasitic oscillations, **2172**; *Q*, **2755**; RC smoothing circuits, **3371**; Thévenin's theorem, **1615, 2741**
  D.A.O., magnetism, British Association symposium, **1025**
  D.G.F., 33⅓-r.p.m. 300-grooves/inch sound-recording system, **277**
  "Diallist", new magnetic alloy containing Nb, **1101**
  F.C. McL., frequency allocation for B.B.C. television service, **2047**
  v.Fe., 3-beam oscillograph for frequencies to 10000Mc/s, **2000**
  F.E.N., C.C.I.T. meeting, Brussels, May 1948, **271**
  G.G., television interference patterns, **2354**
  G.W.O.H., Alexander S. Popov, **(D)3315**
  H.G.M.S., *Q*-meters, **(D)2267**
  J.M., Electronics Park, Syracuse, N.Y., **592**
  M.A., climatization of radio equipment, **1966**
  P.H., *Q*-meters, **(D)2267**
  "Spenny", television interference suppression, **3285**
  Y.A., 819-line television standard for France, **(A)880**
Ansbacher, F., and W. Ehrenberg, electron-bombardment conductivity, **3404**
Apker, L., E. Taft and J. Dickey, photoelectric emission and contact potentials of semiconductors, **1098**
Appleton, E. V., forecasting of ionospheric conditions, **(D)483, (D)2894**
—— and W. J. G. Beynon, lunar oscillations of ionosphere, D layer, **3133**, F_2 layer, **719**
—— W. J. G. Beynon and W. R. Piggott, anomalous effects in ionospheric absorption, **192**
Arguimbau, L. B., Vacuum Tube Circuits, **(B)355**
—— and J. Granlund, f.m. transatlantic communication, **518, 1506**
Armstrong, E. H., f.m. ratio detector, **1775**
Arnaud, J. P., transistor, **915**
Arnett, H. D., with others, solution of 2-beam electron-wave-valve equation, **(A)1824**
Arsetiès, H., dissipation in medium with selective absorption, **1756**; total reflection in magnetic media, **1755**
Aschen, R., design of stagger-tuned television i.f. amplifier, **3394**; 4-unit television receiver without transformers, **2658**
Aschère, H., fault finding in underground cables, **286**
Aschoff, V., 3-ammeter method for capacitance of electrolytic capacitors, **3465**
Ashby, W. R., design for an electronic brain, **1144, (D)1739, 2011**
Ashford, O. M., and H. J. Ferrer, Meteorological Office radar reflector Mark IIB, **1735**
Ashour, A. A., and A. T. Price, induction of electric currents in non-uniform ionosphere, **1049**
Ashton, J. H., and A. N. Beresford, omnidirectional radial-track guide, **100**
Ashwell, G. E., with B. G. Pressey, radiation from car ignition systems, **1779**
Astbury, N. F., iron-testing by wattmeter and bridge methods, **771**
Astrahan, M. M., with W. A. Hughes, duo-mode waveguide exciter, **3336**
—— with others, open-ended-waveguide radiators, **2432**
Aström, E., theory and applications of trochotrons, **2083**
Atkinson, F. V., Sommerfeld's radiation condition, **2803**
Atkinson, P. D., with H. M. Gale, magnetic amplifiers, **(A)971, 2729**
Attree, V. H., d.c. low-impedance stabilized power supply, **3556**
Attura, G. M., servomechanism performance, **2640**
Attwood, C., Practical Five-Figure Mathematical Tables, **(B)1981**
Aubry, R., electronic telecontrol of artillery, **3515**
Auerbach, I. L., and others, Hg delay-line memory, **3082**
Axon, P. E., and H. Davies, measurement of wow, **1570**
Ayer, R. B., Th/W filaments in high-power transmitting valves, **(A)1824**
Ayer, R. W., airborne anti-collision radar, **728**
Aylward, W. R., and E. G. Fubini, electronic multi-couplers, **(A)1612**
Ayzanov, M. M., parameters of amplifier circuits, **2762**

—— with others, transmission-line impedance measurement, 2264
Weston, J. D., theory of communication, 2321
Weston, W. K., with H. Stanesby, London/Birmingham television cable, 1279, 1857
Whalley, H., and G. J. Scoles, radar observation of heavy rain, 1675
Whalley, W. B., with others, television transmitter for 500–900 Mc/s, 1531
Whatman, A. B., ionosphere observations in Spitsbergen, 2796
Wheeler, H. A., Wheeler monographs, (B)3314
—— and D. Dettinger, measuring efficiency of superheterodyne converter, (A)1713, (B)3314
Wheeler, L. J., contrast expansion, 2171, (C)2753
Wheeler, M. S., resonance-frequency measurement for cavity resonators, 1437
Whelpton, R. V., and P. G. Redgment, c.w. long-range navigation aids, (D)402
Whipple, R. T. P., m.f. d.f. in British Navy, 1065
—— with others, errors in h.f. d.f. bearings due to masts, 1074
White, A. H., with others, semiconducting properties of (Ba,Sr)O, 3444
White, C. F., bridged parallel-T network for suppressed-carrier servo systems, (A)1612; signal generators for servomechanism measurements, 2573
White, E. L., trigger circuit for multi-stage surge generator, 659
White, G., with P. Popper, bridge-type valve voltmeters, 1435
White, J. G., contrast expansion, (D)3086
White, S. Y., experimental ultrasonics, 1842; transistor as amplifier and oscillator, 912; transistor Ge-crystal triode, 265, 581, 582, 913
White, W. C., trends in American valve design, 1827, 2863
White, W. D., techniques for air traffic control, 403; theory of nonsynchronous multiplex systems, (A)1672
White, W. G., c.r. tubes with post-deflection a cceleration, 2397
Whitehead, J. B., measurement of dielectric loss under rising temperature, 769
Whitehead, J. W., balanced-to-unbalanced h.f. matching unit for transmission lines, 1884
Whitfield, H. R., A. Harrison and T. J. Pope, fitting and use of marine radar, 2803
Whitman, M. R., graphical design of iron-core reactors, 973
Whitmer, R. M., fields in nonmetallic waveguides, 17
Wholey, W. B., and W. N. Eldred, new type of slotted-line section, (A)2718
Wiblin, E. R., with R. M. Fishenden, design of Yagi aerials, 1603
Widnall, F., and R. Newbound, protective finishing of electrical equipment, (D)1094
Wiegand, D. E., and W. W. Hansen, 60-c/s hysteresis loop tracer, 772
Wiener, F. M., phase characteristics of capacitor microphones, 630; sound diffraction by rigid disks and square plates, 3000
Wier, A. J., with others, carrier system with 8-kc/s bandwidth, 2905
Wiggin, J. F., with L. C. Downes, shutterless television film projector, 1212
Wiggins, A. M., compliance meter for pickups, 3331
van der Wijck. See van der Wyck.
van Wijk, W. D., with J. A. M. van Liempt, breakdown voltage in rare-gas/nitrogen mixtures, 1972
Wilcock, A., phototelegraphy service to Europe, 1515
Wilcox, R., and H. J. Schlafly, large-screen television demonstration at Philadelphia, 2652
Wilde, H., and G. Bosse, magnetic hysteresis of silicon-iron, 1407
—— and E. Eisele, magnetostrictive acceleration meter, 2867
Wilkes, M. V., EDSAC, calculations with, 3458, design of, 1425, 3459, programme design for, 2823
Wilkins, M. H. F., with G. G. Selman, production of high-intensity ultrasonics for biological applications, 2694
Wilkinson, D. H., the Geiger discharge, 1136
Wilkinson, J. H., automatic computing engine (A.C.E.) at National Physical Laboratory, 1425
Willard, G. W., diffraction of light by ultrasonic beam, 2892; focusing ultrasonic radiators, 3003
Willey, E. J. B., linear resistance-charged gas-relay timebase, 1900
Williams, A. J., Jr, R. R. Tarpley and W. R. Clark, stabilized d.c. amplifier, 2563
—— with others, square-law power-level recorder, 2572
Williams, C., c.w. short-range navigation and landing aids, (D)402
Williams, C. E., with J. A. M. Lyon, alkali-amalgam cathodes for power valves, 2670
Williams, E., valve oscillator circuits, 334
Williams, E. M., and D. F. Aldrich, speed of electronic switching circuits, (A)1612
—— and L. Vallese, wide-deviation f.m. oscillators, 331
—— with P. R. Aigrain, design of amplifiers for optimum transient response, 3104; *n*-reactance network synthesis for desired transient response, 3360; theory of amplitude-stabilized oscillators, 44
Williams, F. C., c.r. tube digit store, 1425, (A)1703
—— and T. Kilburn, charged c.r. tube screens as memory devices in calculating machines, (A)1110, 2258; electronic digital computers, 769
—— and A. M. Uttley, velodyne, (D)2155
—— with others, Electronic Time Measurements, (B)3491; Waveforms, (B)2006
Williams, F. E., design of balanced armature cutter-head, 2131
—— with J. S. Johnson, mechanism of luminescence in phosphors, (D)2867
Williams, M., electrokinetic transducer, 838
Williams, R. W., potentiometers for computing circuits, 782
Williams, S. E., shape of r.f. pulses from sun, 77
Williamson, D. T. N., high-quality amplifier, 3101
Williamson, J. C., with J. D. Kraus, radiation of helical aerials in axial

mode, 843
Willis, E. S., EDT crystal filters, 2468
Willms, W., sound attenuation in absorption tubes, 2695
Wilhoner, G., and F. Tihelka, phase-shift oscillator with wide-range tuning, 45
Willshaw, W. E., with E. C. S. Megaw, naval dm-λ communication equipment, 1516
Willson, A. R., vibration testing of aircraft and equipment, 1737
Wilmotte, R. M., and P. A. Demars, polycast u.h.f. television transmission system, 2056
Wilson, D. G., and R. W. P. King, measurement of aerial impedance using a receiving aerial, (A)2558
Wilson, E. D., optimum performance of semiconductor rectifiers, 2452
Wilson, J. V., with others, attenuation of sound in fog and smoke, 614
Wilson, R. R., with D. R. Corson, particle and quantum counters, 168
Wilson, T. M., with E. F. Travis, r.f. capacitance meter, (A)1713
Wilson, W., electronics in heavy engineering, 3221
Wilson, W. R., with R. C. Nelson, infra-red recording spectrometer, [illegible]
Wilton, R. W., pyrolitic-carbon resistors, 1874
Wilts, C. H., with others, electronic techniques for analogue computers, 3176
Winkler, M. R., control of f.m. transmitter frequency deviation, 3576
Wintergerst, S., permanent-magnet materials, 1416
Wireless World, B.B.C. television field contour map, 1519; British and American television waveform standards, 1206; British standard-frequency transmissions, 134; *Caronia* radio equipment, 1799; Decca radar for small ships, 3432; distortion in reproduction of speech and music, (AD)937; diversity f.m. transmission system, 2912; Eddystone Type 680 receiver, 3530; frequency allocations for European broadcasting stations, 832; G.E.C. Model BRT400 communications receiver, 2310; Kelvin-Hughes marine radar, 1079; Philips Model 681A receiver, 3245; properties and uses of thermistors, 3353; Radio Component Manufacturers' Federation 1949 exhibition, 1912; Redifon Model R50 tropicalized communications receiver, 2899; superheterodyne television unit, 1527, 1811; v.h.f. valves with plane electrodes, 2373; Voigt permanent-magnet loudspeaker, 1573; 1948 amateur radio show, 1015; 1949 Physical Society exhibition, 2198
Wisspeintner, C., operating-parameter theory of filter calculation, 1888
Wittenberg, H. H., thyratrons in radar modulators, 2391
Witzig, W. F., h.f. resistance of coils, 658
Woernley, D. L., with others, ultrasonic modulation of light beam, 2626
Wojtech, H., with H. Kleinwächter, graphical determination of oscillation phenomena, 989
Wolf, E., war-time development of German broadcasting transmitter equipment, 2359
Wolf-Stawski, H., with A. Pascucci, ceramics with high dielectric constant, 1413
Wolff, I., and D. G. C. Luck, f.m. radar applications, [illegible]
—— and others, determination of aircraft ground speed using pulse-Doppler radar, (A)1672
Wolk, B., with H. Jacobs, analysis of gas in cathode-coating assemblies, (A)1824
Wood, R. W., Supersonics—The Science of Inaudible Sounds, (B)1576
Woodburn, J., velocity of sound in superheated steam, 1840
Woodbury, J. W., with others, pulse generator for medical applications, 3097
Woodbury, L. A., M. Nickerson and J. W. Woodbury, pulse generator for medical applications, 3097
Woods, C. H., and others, electromechanical strain-gauge multiplier, (A)1[illegible]
Woodville, G. R., stable voltmeter amplifier, (D)438
Woodward, O. M., Jr, reversible-beam aerial for 12-channel television reception, (A)1578, 2720
Woodward, P. M., and J. D. Lawson, arbitrary polar diagram from source of finite size, 302
Woodward, R. H., model of ionosphere, 386
—— with others, Loran : Long Range Navigation, (B)106
Woodyard, J. R., with others, r.f. system of 184-in. cyclotron, 2016
Woolley, J. C., with others, measurement of resonance frequency of re-radiating structures, 1132; performance of h.f. direction finders in ships, 1063
Woolley, R.v.d.R., source of galactic noise, 80
Woonton, G. A., D. R. Hay and E. L. Vogan, horn-aerial radiation patterns, 1599
Wooster, N., with others, elimination of electrical twinning in quartz, 112
Wooster, W. A., and others, elimination of electrical twinning in quartz, 112
Works, C. N., with T. W. Dakin, microwave dielectric measurements, 2557
Wormell, T. W., and E. T. Pierce, atmospherics, (A)395
Wouk, V., portable h.v. power supply, 2919
Wouters, L. F., with others, r.f. system of 184-in. cyclotron, 2016
Wrathall, E. T., B.B.C./Marconi ribbon microphone Type AXBT, 3024
Wredden, J. H., microscopic examination of enamelled wire, 114
Wright, D. A., emission from oxide cathodes, 2091, 3590
Wright, G. S., with E. M. Ostlund, f.m. broadcasting in U.S.A., 1512
Wright, S. B., with N. Monk, public telephone service on trains, 225
Wwedenski, See Vvedenski.
van der Wyck, C. T. F., modern receiver for radiotelegraphy, 2041; simultaneous reception of signals from several stations on a single aerial, 3535; s.s.b. equipment of Dutch Post Office, (D)1183
Wyke, R. E. B., with others, power diodes, 531
Wylie, F. J., and M. W. Kaye, operational value of shipborne radar, 2803
Wyman, F. E., regenerative frequency divider, 2481
Wyss, H., telephony service for 5th Olympic winter sports, St. Moritz, 1948, 2318

Y

Yabsley, D. E., with others, 50-cm solar radiation during eclipse of 1st Nov. 1948, 3417
Yaffee, P., l.f. synchronized sawtooth generator, (A)1612
Yang, Yo-Han, with R. P. Bien, fluctuation of emission from oxide cathodes, 2090
Yates, F., systematic sampling, 761
Yates, J. G., pulse excitation of impedance bridges, 2271
—— with others, plotting of electron trajectories, 1751
Yeh, Chai, anode/screen-grid space in beam tetrode, 1835
Yeh, Yung-Ching, received power of receiving aerial, 1590
Yensen, T. D., with J. K. Stanley, hiperco, a magnetic alloy, 751
Yo-Han Yang. See Yang, Yo-Han.
Young, A. J., radiators for air-cooled transmitting valves, 2951
Young, J. D., and H. M. Beck, design equations for reactance-valve circuits, 3383
Young, W. R., and L. Y. Lacy, transmission at 450 Mc/s to mobile radio units, (A)1757
—— with D. K. Gannett, frequency and phase swing in f.m. and ph.m. systems transmitting speech, 2048
Yu, Y. P., degenerative regulators, (A)1800; dynamic impedance circuit, 346; peak voltmeter for pulses, 151; regenerative amplifiers, (A)1612, 3386
Yuan, L. C. L., precision h.v. valve voltmeter, 149
Yung-Ching Yeh. See Yeh, Yung-Ching.

Z

Zaalberg van Zelst, J. J., bridge circuit for capacitor microphone, 9
Zade, H. P., with L. Grinstead, r.f. welding of plastics, 3451
Zadeh, L. A., with J. R. Ragazzini, wide-band a.f. phase meter, (A)1713
Zahl, H. A., work of S.C.E.L., 2111
Zakarias, I., reduction of hum in pentodes, 916
Zamsky, J., hysteresis loops on c.r.o., 773
Zartman, I. F., ultrasonic velocities and absorption in gases at low pressures, 2118
Zavales, C. T., with others, application of radar technique to X-ray recording at 150 frames/sec, (A)1733, 2600
Zeidler, H. M., and J. D. Nie, pentriode video amplifiers, 682
Zeitlin, L., with P. Kalantarov, iterative impedance and resonance curve of recurrent circuit, 3087; resonance phenomena in recurrent circuits, 3089
Zeluff, V., television remote viewers, 1216
—— with J. Markus, Handbook of Industrial Electronic Circuits, (B)1245
Zelyakh, E. V., general theory of linear quadripole, 2467
Zenneck, J., with G. Goubau, FIAT Review of German Science 1939–1946: Electronics, incl. Fundamental Emission Phenomena: Part 1, (B)2414
Zepler, E. E., and J. Hekner, triode interelectrode capacitance, 2101
Zeytlenok, G. A., stability of output stages of high-power transmitters, 2346
Zhekulin, L. A., effects of non-uniformity on coaxial cable parameters, 2138
Ziegler, A. W., mechanical development of EDT crystal units, 3485
van der Ziel, A., fluctuations in electrometer circuits, 1123; mixing properties of nonlinear capacitors, 1773; virtual-cathode problem for cylindrical electrodes, 2384
—— and A. Versnel, induced-grid and total-emission noise, 249; noise factor, of grounded-grid valves, 2087, of pentodes for λ 7.25 m, 1246
—— with M. J. O. Strutt, electron-inertia effects in valves, 254, 1233; spontaneous fluctuations in amplifier valves for m and dm waves, 1631; v.m. valves as u.h.f. preamplifiers, (D)3106
Zinchenko, N. S., frequency stability of dynatron-type magnetron oscillations, 259
Zingerman, A. S., statistical method of determining breakdown voltage, 140
Zinke, O., end-fire fed-dipole arrays, 20
—— with H. J. Wegener, attenuation of cm waves in air-space cables, 1273
Zinn, M. K., transient response of f.m. receiver, 1485
Zore, V. A., self-excitation of loaded triode oscillator, 2480
—— with S. D. Gvozdover, dm-λ triode feedback oscillator, 999
Zünti, W., with others, mixer stages of coincidence amplifiers, (A)976
Zuvers, H. E., sealed ignitrons for transmitter power supplies, 556
Zweguintzow, M., with A. Latreille, h.f. telecommunications on power lines, 3540
Zwikker, C., relations between properties of solids, 3162
—— J. van den Eijk and C. W. Kosten, absorption of sound by porous materials, 1569
Zwislocki, J., and E. Lüscher, adaptation of ear to sound stimuli, 2702
Zworykin, V. K., recent progress in television, 1517
—— and E. G. Ramberg, Photoelectricity and its Applications, (B)3603
—— L. E. Flory and W. S. Pike, letter-reading machine for blind, 2590, 2877

SUBJECT INDEX

SYMBOLS (A) Abstract, (B) Book Review, (C) Note of Correction, (D) Discussion

A

Abacs, for ionospheric control points, 3235
  for r.f. transmission lines, 1274
  technical, (B)1637
  for tension, sag etc. of overhead lines, 3033
Absorption, (See also Ionosphere; Microwaves; Sound)
  acoustic, by felt-covered spheres, 2123, 2419
    in fresh and sea water, 613
    measurement at low frequencies, 936
    by porous materials, 1569, 3017
    by various materials, 7
  atmospheric, of microwaves, 2032
    of mm waves, 1028
  ground, with elevated dipoles, 1864
  h.f., by ionized gases, 71
    in liquids and solids, (A)366, 2244
  ionospheric, 2027, 2305, (D)3521
    and field-strength calculations, 2301
    at vertical incidence, and sun's zenith angle, 2026
  microwave, 456
    of gases, (A)367
    minimum detectable, 693
    of NH_3, pressure broadening in, 3409
    by oxygen, 3410
  space-wave, and large-scale weather conditions, 2037
  spectra, infra-red, of atmospheric gases, 1348, of water vapour, 1349
    microwave, and chemical analysis, 2504
  in supercooled water, for λ 1.25 cm, 2505
  u.h.f., by salt solutions, 1027, 1921
  ultrasonic, in gases at low pressures, 2118
    in liquids, measurement of, 932, by pulse methods, 2697
    in sea water, 612
    in solids, (A)931
    in water, at 0°–80°C, 686, at 1 Mc/s, 3322
Acceleration meter, magnetostrictive, 2867
Acoustics, (See also Absorption; Broadcasting; Impedance; Sound; Ultrasonics)
  applied, recent developments in, 1253
  architectural, of auditoria, 4
    of concert halls, (AD)2124, at Liverpool and Glasgow, 1849, and theatres, Prague, 3015
    c.r.o. reverberation recorder, 6
    c.r.o. reverberation-time measurement, 5, 1265
    variable, 3016
  bibliography, 602, 924, 2114, 2683, 2995
  boundary layer in front of rigid walls, 925
  coupling of cylindrical tube to semi-infinite space, 607
  deadened rooms, design principles, 2699
  interactions between plate and sound field, 605, (C)2117
  measurements by Rayleigh disk, accuracy of, 3008
  parabolic sound concentrators, 276
  transparency of rectangular plate, 1564
  vocal resonators, artificial, experiments with, 3012
Aerial arrays, broadcasting, m.f., design of, 1605
  end-fire, fed-dipole, 20
  with horizontal beams free from side lobes, 2148
  omnidirectional, vertically polarized, 4-element, 952
  radiation patterns of, 1601
—— systems, Adcock, effect of asymmetry, 1293
  gain of, 3057
  for h.f. d.f. in ships, 1075
  ring, 308, (C)1296
Aerials, (See also Couplers; Horns; Lenses, microwave; Transmission lines; Waveguides)
  aids in sketching field-strength diagrams, 3344
  aircraft, receiving, omnidirectional, for 108–122 Mc/s, (A)1578
  arbitrary polar diagram, from source of finite size, 302
  biconical, (D)3341
    ground-plane field of, 3340
    input-impedance calculation by e.m.f. method, 3343
    theory of, 1588
  broadcasting, clover-leaf, high-gain, 2435
    directive, radiation patterns of, 2146
    f.m., multi-V, 1595
  calculation of doubly curved reflectors for shaped beams, 311
  for circular polarization, 2142
  cm-λ, absorption surfaces of, 961
  for controlling non-fading range of broadcasting stations, 647
  coupled, theory of, 960
  cylindrical, with concentric ring of subsidiary radiators, 1865
    infinitely long, 2715
  dielectric-rod, 1604, 3345
    radiation patterns of, 1297, 1602
  diffraction, with axial symmetry, 3049
  dipole, conical, impedance of, 644
    with dielectric envelope, radiation resistance of, 1294
    impedance measurement by reflection method, 2559
    above plane earth, theory of, 951
    radiation from, 950
    radiation impedance and aerial shortening of, 1598
    transmitting, 3055
    vertical, ground-absorption formula for, (C)949
  directive, helical, wide-band, 306
    horn, radiation patterns of, 23
    polar diagrams and gain of, (A)2442
    reversible-beam, for television, (A)1578, 2720
    spaced-loop, 310
    wide-band, u.s.w., (B)2722
    Yagi, design of, 1603
    for 152–162 Mc/s, 1869
  discone, high-gain, 303, for 40–500 Mc/s, 3051
  distribution of current on, 2439, and of charge on, (A)1578, 3047
  elevated-dipole, ground absorption with, 1864
  fan, broad-band, 2437
  feeders for, h.f. balancing devices for, 1314
  flush-mounted, for cars, 1594
  folded-dipole, impedance transformation in, 3342
  frame, measurements on, 2441
  ground, properties of, 962
  helical, end fire, theory of, (A)1578
    impedance of, 650
    radiation in axial mode, 643
    v.h.f., 1860, design of, 1861
  horn, formula for radiation patterns, 1599
    gain and effective area of, 1600
    gain measurement for, 1866
    radiation patterns of, 3053
  impedance of, 1597
    measurement in aircraft, 2270
    measurement using receiving aerial, (A)2558
  inverted-L, λ/4, for trains, 2717
  linear, radiation resistance of, 3054
  loaded, radiation resistance of, 2438
  long, properties of, 1589
  long-wire and horizontal rhombic, polar diagram determination, (B)1300
  manual, (B)964
  maximum directivity of, (D)21, (D)22
  microwave, design of, 1291
    effect of dielectric sheets, 2436
    parabolic, gain formula for, 3056
    using parallel conducting sheets, 1292
    theory and design of, (B)2721
  for multichannel mobile telephony, (A)1578
  multi-slot, 957
  omnidirectional, physical limitations of, 1587
  parallel, centre-driven, mutual impedance of, 1295
    mutual impedance of, 648, (C)1867
  polar diagram measurement for aircraft in flight, (A)307
  power-equalizing network for, 3052
  pylon, f.m., 8-section, for 1200 kW, 304, 864
  radar, rapid scanning for, 1593
  radiation of, general theory, 1859
    phase measurement, 2571
    scattering, 3046
  receiving, formula for current in, 2298
    received power of, 1590
    for Rural Radio Network, 495
    for television, 2718
  rectangular-waveguide, polar diagram of, 2433
  reflectors, cylindroparabolic, design for optimum gain, 1862
  rhombic, design chart, 648, 959
    with feedback, 2714
  with screened down-leads, for interference-free reception, 2624
  sectoral-horn, transmission-line characteristics of, 3043
  slot, elliptical, diffraction pattern for, (A)1578
    off-set from centre of rectangular waveguide, 1586
    potential distribution along, 3044
  slotted-cylinder, polar diagrams of, (A)309, 958
    radiation from, (A)1578
  straight-wire, Hallén's theory for, 953
  surface, theory of, 3048
  television, 955, 956
    for apartment houses, 243
    impedance measurement and matching for, 18
    indoor, 2719
    W.T.V.S., 954
  turnstile, method of feeding, 1298
  u.h.f., 2143
  vertical, with ground planes, impedance measurement for, 2440
  waveguide, channel-section, 2426
    open-ended, 2432
  wide-band, matching with feeders at 500–600 Mc/s, 1596
    for television and f.m. reception, 305, (C)645
Alloys, (See also Ferromagnetic materials; Magnetic materials)
  Fe/Ni, powdered, coercive field of, 1418
  ferromagnetic, structure and properties of Cu_2MnIn, 1956
  magnetic, high-coercivity, containing Nb, 1161, hiperco, 751
  permanent-magnet, anisotropy in, 1958
  pressure and temperature coefficients of resistance of, 3173
  resistance, evanohm, 124

thermal expansion of, 1103
Altimeters, capacitance, (A)1126, 2848
radio, f.m., absolute, 97
Amateur radio, (See also Transmitters; Transmitting stations)
A.R.R.L. handbook, 1948 edition, (B)601, 1949 edition, (B)2682, 1948 French edition, (B)3317
push-pull transmitter, 555
Amplification, in double-beam valves, 2977
microwave, space-charge wave method, 1024, 3406
Amplifiers, a.c., application to optical measurements, 1007
photoelectric, with a.c. galvanometer, 1908
a.f., heater supplies for hum reduction, 677
high-quality, 1845
hum reduction in, (A)2496
miniature, 1341
using Rochelle-salt crystal, 2708
tunable, 2765
very-high-quality, 1003
6-W, Type 6AS7G, 1909
amplitude-selective, 344
aperiodic, theory of, 2484
carrier-frequency, path-time distortion in, 2494
cathode-coupled, graphical analysis of, 676
coaxial, symmetron, 50-kW, for f.m. broadcasting, 2365
compensated, square-wave analysis of, 1626, (C)2192
for conductance bridges, 1907
for counter tubes, 1906
d.c., carrier-type, 3385
design and limitations of, 3384
stabilized, 2563
design for optimum transient response, 3104
direct-coupled, with cross-coupled input circuit, (A)1612
double-stream, (A)1612, 3387
feedback, in cascade, 1009
corrector circuits for, 1013
design of, 3110
nonlinearity in, (D)2200
single-stage, 2495
theory of, (D)1012, 1342
for f.m. broadcasting, 10-kW, 1904
for galvanometer, 2844
grid current and neutralization of, 1831
grounded-anode, sensitivity of, 2188
grounded-grid and grounded-cathode, sensitivity of, 1338
h.f., high-sensitivity, 1903
h.f. and l.f., equivalence of, 675
high-quality, 3101
i.f., radar, design of, (C)3389
subminiature, (A)1612
television, design of, 1635
isolation, decade-gain, 2190
limits of gain at u.h.f., 1332
line, for Paris-Toulouse coaxial cable, 212
linear, Doherty, in American broadcasting, 1343
effect of valve noise on accuracy, 1229
general theory of, 2187
magnetic, (See also Transductors) 314, (A)971, 2450, 2728, 3065, 3350
amplistat, 3352
analysis and applications of, 313
bibliography on, 2451
effect of core materials on design, 2449
with feedback, 2731, analysis of, (A)2448, 3064
without feedback, analysis of, (A)2447, 3351
push-pull, design of, 1873
series-connected, 2729
simplified, 315, (D)1304
theory of, 656, 2730
for warships, [illegible]
negative-feedback, 1910, (D)2196, (D)2768, (D)3111
design formulae, 56
overall amplification of, 2195
network representation of admittances, 2194
permissible nonlinear distortion in, 3107
power, for Citizens' transmitter, 1006
grounded-grid, 2763
RC, design of, 1628
reactive-feedback, influence on galvanometer response, 1014
regenerative, (A)1612, 3386
see-saw or anode follower, 678
for square-wave signals, 1340
stabilizing, for television, 3114
stable, for voltmeter, (D)438
stagger-tuned, design formulae for, 2193
phase-distortion reduction in, 681
subminiature, design techniques for, 2490
superregenerative, theory of, 1627, (C)2488
synthesis by means of conformal transformations, (A)1612
transmitter, wide-band, h.f., (A)674
transistor, 912
travelling-wave, filter-type, 2668
tuned, response to gliding tone, 2473
5-c/s, for use with thermocouples, 2766
u.h.f., v.m. valves as, (D)3106
u.s.w., problems of, 1629
valve, (B)1638
v.h.f. double-beam, 2977, analysis for, 1540, design and construction of, 2487, 3388, solution of equation for, (A)1824, theory of, 1583, 1825, 2486, (D)3300
video, cathode-compensated, 2771
cathode-neutralized, 3393
pentriode, 682
stagger-peaked, 1344
testing with square-wave generator, 3099
transient response of, 3395
wide-band, with distributed amplification, 1339, 2485
l.f. amplification in, 3109
transient response of, 3105
for 100 c/s to 20 Mc/s, 3103
Analogies, between angle-of-incidence and frequency problems, 3400
between waveguide e.m. fields and elastic-membrane vibrations, 3040
Analyser, distribution, for impulse lengths, 132
network, for e.m. field problems, 316, 3066
for network response characteristics, 1128
Analysis, (See also Circuit analysis; Network analysis; Waveform analysis)
dimensional, electrical applications of, 60
Anemometer, hot-wire, compensated, 2586
Atmosphere, (See also Ionosphere; Stratosphere; Troposphere)
conductivity at Huancayo, 721
currents at 120 km height, 1932
ionization in, 1378
low-level radio ducts in, 1167
lower, diffusion in, 1667
ionic equilibrium of, 2225
radar reflections from, 1761, 2300
sea-breeze structure, 1668
luminescence of, 1936
lunar tidal motions in, 1382
oxygen/nitrogen, photochemical processes in, 1376
photochemistry of oxygen in, 1377
potential gradient, 1055
radar study of, 2526
stratified, refractive-index profile deduced from radio observations, 2025
structure of temperature field in turbulent stream, 1928
temperature at tropopause and of lower stratosphere, 3137
upper, atomic-O zone, ionized layers, and radiation, 1929
atomic oxygen in, 1379, vertical distribution of, 2224
wind and temperature measurements up to 30 km, 3428
Atmospheric electricity, airspeed and precipitation charging, 2622
during disturbed weather, (A)394
fundamental problem of, 3138
Atmospherics, location of, [illegible]
measurement of, 2276
propagation of, 1389
recording on s.s. *Commandant Charcot*, 3429
waveform of, (A)395
Attenuation, of cm waves, in air-space cables, 1273, by electron beam, 3382
of short waves in ionosphere, 1165
Attenuators, calculation of, 983
coaxial, for 4–10 kMc/s, 348
microwave, broad-band, (A)1713
materials for, 1691, 2535
standard, (A)1730, 2578
Audiometer, direct-reading, 3325
Aurora, displays at Saskatoon, Jan./Feb. 1949, 2522
heights of various forms, South Norway, 724
3000-Mc/s radiation from, 3139

B

Barium titanate, dielectric behaviour of, 745, 746
as electromechanical transducer, 3439
and other Ti compounds, refractive index of, 2534
piezoelectric properties of, 1087
single crystals, production and properties of, 1689
single-domain crystals, properties of, 1963
Batteries, dry, using Mg, 532, 533
Vidor Kalium, 230

effective and circuit bandwidths, (A)3074
gyrator, new circuit element, 960, 3075
high-pass filter function, 966
Miller effect, 3076
network transformations, 32
optimum response to Heaviside pulse, 3363
for oscillating diode in transit-time region, 998
pulling of oscillations, 34
response curve of quadripole, 40
response of linear resonant systems, 671, (C)1325
signals with limited spectra, 3069
transient distortion in networks, (A)652
transient response of linear systems, 651, of nonlinear systems, 312
trapezoidal waveform with minimum distortion, (D)1302
Circuits, (See also Filters; Networks)
a.g.c., for television receivers, 351, 352
amplifier, i.f., properties of, 1002
negative-feedback, as variable impedance, 346
parameters of, 2762
bridge, for capacitor microphone, 9
cathode-follower, with cathode tap, (A)345
clipper, cathode-coupled, 198
coincidence, with high resolving power, 974
with medium resolution, 975
counter, pulse-amplitude discriminator, 1877
coupled, h.f. and m.f., graphical design methods, 673
initial effects in, 43
phase distortion in, 1328
triple-tuned, analysis of, (A)1612
tuned, graphical analysis of, 3377, parabolic loci for, 672
and u.h.f. f.m., 2475
delay, phantastron, 2167
diode, analysis of, 2151, graphical analysis of, 2152
distributed-constant, impedance-function theory for, 1868
dual, 33
electronic, industrial, handbook of, (B)1345
with e.m. coupling, 2174
equivalent, for piezoelectric acoustic receiver, 3020
for transformers, 1613
f.m., calculations for, 1883
input, design of, 584
phase-inverter, cross-coupled, 2446
integrating, Miller, 347
linear varying-parameter and nonlinear, analysis for, (A)1612
LRC, calculation of transients by step-by-step integration, 2465
microwave, principles of, (B)1636
mixing, for coincidence amplifiers, (A)976
multiplying, and wattmeters, 3361
negative-resistance, graphical methods for, 1323, theory of, 1542
nonlinear, operational analysis of, 3077
oscillatory, periodic and non-periodic phenomena in, 1701
resonance phenomena in, 3376
response to gliding tone, 670
temperature compensation of, 2754
transient response of, 3090
peak-selector, (A)1612
positive-feedback, for miniature equipment, 3112
potted, use of casting resin, 3441
printed, manufacture of, 197
quench, for G-M counters, 2457
reactance-modulator, design equations for, 3383
receiver, dm-λ, amplifier and mixer, sensitivity of, 2312
recurrent, iterative impedance and resonance curve of, 3087
resonance phenomena in, 3089
scaling-down, 977, 2159
see-saw or anode-follower, 678
series-capacitor, for valve heaters, 564
smoothing, RC, 3371
stagger-tuned, calculation of, 2769
sweep, (A)1612
switching, 2-terminal, synthesis by means of Boolean algebra, 2456
transmission, microwave, (B)1016
trigger, high-speed, 2160
for multi-stage surge generator, 659
reactive, 2739
triggered, spurious signals due to noise, 1777
triode, matrix technique for, (D)2168
tuned, image rejection calculations, 332
valve, (B)355, basic, sensitivity limit of, 3362
valve-oscillator, 334
Classification system, Universal Decimal, 268
Climatization, (See also Protection)
of electrolytic capacitors, 1967
of radio equipment, 1966
Clocks, atomic, 1983, 2549
quartz-crystal, 1112, 1113, (C)3183, evolution of, 762
Coils, choke, effective permeability of premagnetized cores, 29, 3171
circular, approximate inductance formulae for, 3356
dust-core, h.f., design of, 2736
h.f. resistance of, 658
i.f., television, design chart for, 2737
inductance, without iron, axial field and losses of, 1876
with laminated-iron cores, distortion in, 2738
multi-layer, calculation of mutual inductance, 319
progressive and universal, design of, (D)3390
Pupin, developments since 1924, 1276, hysteresis distortion in, 1168
single-layer, Q calculation for, 1306
solenoid, single-layer, inductance calculation using Bessel functions, 2157, screened, inductance of, 2158
Comets, in 1947, 1032
Communication, theory of, 62, 2321
elementary, 2320
mathematical, 1361
in presence of noise, 1649, 2319
statistical, (A)1785

Dielectric constant, of ceramics, at 100 Mc/s and high temperature, 3466
of gases, 764
measurement using resonant cavity, 1434
of insulators at u.h.f., 118
of liquids, accurate measurement of, 3130
measurement in waveguides, 1443
of solids at microwave frequencies, 1717
of solutions at h.f., 1432
—— **loss** measurement, with rising temperature, 769
—— **properties**, of Ba/Mg titanate, 414
of BaTiO$_3$ single-domain crystals, 1963
of BaTiO$_3$/SrTiO$_3$ mixtures at 10 kMc/s, 1093
of cellulose impregnated with semiconductor, 747
of ceramics and glasses at cm λ and 20°–400°C, 2248
of ice, 3191, at λ 1.25 cm, 2532
of insulators at 750 Mc/s, 119
measurement by balance methods, 1431

of $MgTiO_3$ ceramics, 1414
microwave, of human body, 2282
of semiconductors at u.h.f., 1119
of solids at cm λ, 1989, 2557
of titanates at u.h.f., 1092
Diffraction, (See also Electromagnetic theory; Sound; Wave propagation; Waves)
approximate methods of calculation for, 817
asymptotic treatment of, 3119
of e.m. waves, by plane screen, 3124
by wire grid, 1754
of light by ultrasonic beam, 2692
of plane waves, by black screens, 2779
by semi-infinite conducting sheets, 3229
of sound, through circular aperture, 2690
by circular disk, 3001
by rigid disks and square plates, 3000
of sound pulses at slit in reflecting screen, 2417
theory, 3118
singularities at sharp edges, 2210
Dipole moment, of gases, 764
Direction finders, Adcock, polarization errors in, 3143
single-receiver, automatic, for 100–150 Mc/s, 1078, 1938, 1940
aural-null and visual methods of bearing display, 3142
automatic, 1394
airborne, 1058
c.r., h.f., naval, 1064
h.f., airborne, resonance effects in, (A)1672
performance in ships, 1063
symmetrical screened transformers for, 969
marine, 94
m.f., crossed-loop, 3431
mobile, spaced-loop, 1076
rotating H-Adcock, 2234
test equipment for, 2575
U-Adcock, polarization error, 1062
—— **finding,** (D)1066
asymmetry errors in Adcock systems, 1293
by cyclical differential measurement of phase, 1059, 2233
h.f., with Adcock aerials, 1077
bearing errors due to masts, 1074
probable accuracy of, 1068
ship aerial systems, 1075
m.f., in British Navy, 1065
with multi-aerial Adcock d.f. systems, 1061
naval, v.h.f., 1060
personal errors in, 91
radiogoniometers, for atmospherics, operation threshold of, 92
recent progress in, 1393
relation between speed of indication, bandwidth and signal/noise ratio, 2232
site errors at v.h.f., 3145
statistical plotting methods for, 1067
statistical theory of fixing, 1069
Discharge, (See also Corona)
direct, impulse characteristics of ground, 723
gas, dielectric properties of, 1917
electronic interaction in, 1641
h.f., starting potential of, 2500
glow, between coaxial cylinders, 2781
h.f., experimental investigations, 2498
in rarefied gases, 362
Discriminators, crystal, 1000
frequency, harmonic distortion in, 3534
response to pulses, 2311
wide-band, design of, 2483
l.f., 2742
phase, for f.m. receivers, 1001
Displacement measurement, electronic, 2589
using r.f. gas-discharge phenomenon, (A)1733
Dissipation, in medium with selective absorption, 1756
Distortion, amplitude and phase, 3392
attenuation and phase, in coaxial cables, 14
and effect on television signals, (A)654, 1871
in coils with laminated-iron cores, 2738
delay, in television transmission, 1521
formula, closed form of, 1303
in f.m. circuits, (D)324, 2038
calculation of, 1883
harmonic, in frequency discriminator, 3534
hysteresis, in Pupin coils, 1168
measurement, in frequency modulator, 1991
proposed standards for sound recording, 791
simple method, 2577
nonlinear, in amplifiers, 3107
and bandwidth of f.m. signals, 1177
in dynamic loudspeakers, 2135
measurement of, (A)1713
in u.h.f. diodes, 2386
path-time, in carrier-frequency amplifiers, 2494
in pulse-count-modulation systems, (A)1785
of scanning waveforms, 3271
in speech and music transmission, (AD)937, (AD)2706
telegraphy, effect of filtering on, 2751
tracing, in gramophone records, 2705, analysis of, 2704
transient, in networks, (A)652
Dynamometer, piezoelectric, for recording work of machine tools, 161

E

Ear, adaptation to sound stimuli, 2702
cochlea, as frequency analyser, 1259
physical basis of action of, 1260
cochlea partition, resonance at various points of, 2122
vibration of, 2121
fatigue, measurement with audiometer, 1568
middle, structure of, 2120

Electrets, 1307, 2458, 3359
design and performance of, 1879
Electrical engineering, fundamentals of, (B)923
in tropics, 739
—— **theory,** tensorial, 2541
Electrodynamics, classical, without singularities, 1359
Electrolyte tank, for measurement of steady-state and transient response of networks, 2743
use for study of axially-symmetrical magnetic fields, 1968
Electromagnetic field, application of conformal representation to, 1645
h.f., uniform, production of, 1430, 2784
methods of analysis, 691
microwave, in narrow gaps, 2149, (C)2444
nonlinear theories of, 2207
of point current source on earth's surface above inclined strata, 1356
spiral, due to eddy currents in cable sheath, 3334
spiral-phase, properties and applications of, 2228
—— **theory,** elements of, (B)2788
and Lagrange's equations, 1646
law of action between moving charges, 2783
series developments for retarded potentials, 2208
surface currents on conducting sphere excited by dipole, 1592
Electromagnetism, (B)75
experimental basis of, 3123
and gravitation, 3128
Electromagnets, cyclotron, soft iron for, 2538
Electromedical apparatus, pulse generators, 2020
Electrometer, automatic, precision, 3473
dynamic, direct reading, 2845
Electron beams, in axial field, (A)1639
control by intersecting beam, 3294
deflection of, 2677
deflection theory, 2787
high-current, in e.s. fields, 3577
tubular, properties of, 2204
—— **diffraction,** from Si and pyrite surfaces, 1952
—— **emission,** from oxide cathodes, microscope for study of, 3486
secondary, 2501
in output valves, 2969
suppression in microwave valves, 558
thermionic, 3407
—— **guns,** design of, 1550
for h.v. tubes, 1460
—— **inertia,** effects in valves, 254, 1233
—— **lenses,** with correction for spherical aberration, 1457
e.s., aperture errors of, 2880
asymmetry of, 2879, 3510
distortion-free, 2292
optics of, 1746
with hyperbolic field structure, 813, 1456
immersion objective, axial-potential calculation for, 2597
magnetic, with curvilinear axis, 1458
—— **microscope,** aberration correction with electron mirrors, 2019
chromatic aberration and resolving power in, 1453
developments in Germany, 1939–1946, 2368
fluorescent screen for, 2293
horizontal, 1747
illumination system for, 3511
image phase contrast in, 2881
R.C.A. Type EMU, adjustable aperture for, 184
resolution limit of, 1745
using secondary electrons, scanning principle, 3512
use in optical industry, 2598
voltage stabilization for, 1805
—— **microscopy,** British developments, 182
conference, Cambridge, Sept. 1948, 1749, 2882, Delft, 3513, London 1948, 474
survey, 1454, 1748
—— **motion,** in cavity magnetron, 1557
plotting of trajectories, 357, 688, 1751
under space-charge conditions, 3120
—— **multipliers,** 3297
photoelectric, 2074
pulse period of, 1152
RCA Type 931A, background noise in, 3298
use in scintillation counters, 1446
—— **optics,** for fields of axial symmetry, 1351, 2780
focal properties of immersion objective, 183
of h.f. valves, 1559
of immersion systems, 814
investigations in Germany, 1939–1946, 2205
of magnetic field bounded by parallel planes, 3209
refractive index in, 1455
—— **plasma,** cylindrical, influence of transverse magnetic field on, 1360
—— **resonators,** palletron, 810
—— **scanner,** for surface investigations, 3227
—— **streams,** fluctuations due to ions, 689
—— **theory,** recent developments of, 3401
—— **tube,** for viewing magnetic fields, 1919, 2375

- polarized, 2203
- 2nd Moscow conference, 1948, 2202

Luminescent materials, preparation and properties of, (B)126

M

Magnetic energy, mutual, of current and magnet, 365

—— **field,** a.c., penetration into solid iron, 3411
- of axial symmetry, plotting with electrolyte tank, 1988
- effect on radiation from Ra-E, 694
- lines of force made visible, 1919, 2375
- of massive rotating bodies, 703, 704, 1374, 1655, 1925, 2219
  - and gravitation, 1039
- measurement by electronic fluxmeter, 435
- of ring sound-recording head, 636
- uniform, coil systems for, 3468
  - maintenance of, 1720

—— **materials,** (See also Alloys: Ferromagnetic materials) 750, 1417
- anisotropic alloys, Alcomax, 3453
- for electrical power plants, (A)3442
- ferrites, 1085, 2809
  - dispersion and absorption at frequencies above 1 Mc/s, 3160
  - of Ni and Mg, longitudinal magnetostriction of, 3163
  - properties of, 3159
- hiperco, 751
- new alloy containing Nb, 1101
- properties of, 1357

—— **properties,** of Fe, theory of wattmeter and bridge measurements, 771
- of $Fe_2O_3\alpha$, theory of, 3161
- measurement with c.r. hysteresis loop tracer, 146, 772, 773
- of powdered Fe/Ni alloys, 1418
- of silicon-iron, 1407

—— **storms.** See Geomagnetic storms.

—— **susceptibility** and loss, measurement at h.f., 144

—— **testing,** symposium at 1948 A.S.T.M. meeting, (A)3467

Magnetization, in perpendicular direct and alternating fields, 1410

Magnetometers, airborne, 477, 815, use for Canadian survey, 1734
- remanent, high-sensitivity, 3469
- saturable-core, applications of, 436

Magnetostriction generators, 1802
- longitudinal, of ferrites of Ni and Mg, 3163
- use for torque measurement, 463

Magnets, permanent, 749, 3170, 3452
  - magnetization of, 1415
  - materials for, 1416
  - perfect, 3408
  - made from pure iron powder, 2816

Maps, zenithal-equidistant, construction of, 591

Metals, and alloys, new, development of, 3166

Materials, various, tabulated properties of, 3167

Mathematical tables, Bessel functions, (B)1708, of fractional order, (B)1980
- elementary functions, (B)2828
- higher functions, (B)2826
- sine and cosine integrals, (B)3462, iterated, 1702
- 5-figure, (B)1981, of natural trigonometrical functions, (B)1709

Mathematics, algebra, Boolean, use for synthesis of 2-terminal switching circuits, 2456
- analysis by means of time series, 3175
- basic, for radio, (B)423
- Bessel equations, table of roots for calculating cavity-resonator frequencies, 417
  - and waveguide theory, 416
- calculus, operational, (B)1426, and applications, (B)2827, history of, 1313
- differential equations, linear, with constant coefficients, integrator for, 1424, with slowly variable coefficients, 1423
  - linear partial, models for, 1706
  - partial, solution by means of resistance networks, 3460
- elliptic functions, numerical computation of sn(mK/n), 2543
- Fourier analysis, and electrocardiogram, 2255
- Fourier transforms, and transit-angle functions, 2981
- functions, aleatory, harmonic analysis of, 2254
- integral equations, solution using Laplace transform, 757
- Laplace transformation, introduction to, (B)3182, and solution of linear integral equations, 757
- odd and even components of analytical function, 1422, (C)1976
- and radio problems, 1106
- spherical harmonics, (B)3181
- tensor analysis, review of work of Gabriel Kron, 127

Measurement, (See also individual subjects)
- apparatus, at 1949 Paris Fair, 2842
- equipment, for dm waves, 3198
- h.f., conference on, 1985
- of phase and group transmission times, 1115
- of radio quantities, above 300 Mc/s, (A)427, below 300 Mc/s, (A)426
- technique, for cm waves, 2554
  - h.f., German, (B)2865, using transmission lines, (B)2866
- u.h.f., using coaxial elements and connectors, 437
- of Z, C, L and f by proportional currents, 3185

Medical research, waveform analysis of body potentials, 170

Metallizing, modern methods, 754

Metallurgy, powder, 1973, 2817
  - iron, German methods for, 3172
  - and manufacture of permanent magnets, 2816
  - Ni-Fe alloy dust cores, 122
  - 1948 Conference at Graz, 123, 753

Meteorology, (See also Radar)
- application of radio in, 1375
- radio, problems in, 1159
- use of radar, for detection of precipitation, 393
  - in forecasting, 385

Meteors, daylight streams, May–Aug. 1947, 76
- diffraction of radio waves from trails, 2508
- effect on radio, (A)370
- location of radiant by radar, 1031
- measurement of velocities, [illegible]
- radar echoes from, 2213
- radio detection of, 1364, theory of, 1392
- transient radar echoes from ionosphere, 89

Meters, (See also individual subjects)
  - light-pattern, for disk sine-wave records, 624
  - long-scale, for electrical quantities, 788

Microphones, calibration of, 763
- capacitor, bridge circuit for, 9
  - phase characteristics of, [illegible]
  - for stereophony, 10
- dynamic, moving-coil, 3022
- electrodynamic, miniature, S.I.F. MD.8, 2127
- free-field calibration to 100 kc/s in air, 620
- high-grade, noise level of, 3025
- interaction with couplers and earphones, 2129
- miniature, omnidirectional, 1853
- moving-coil, 1268
- open-circuit voltage measurement, 2130
- ribbon, B.B.C.-Marconi Type AXBT, 3024
- single-element, unidirectional, 1854

Microwaves, (See also Wave propagation, e.m.)
- biological effects of, 2283, 2284
- measurement technique for, 2554
- between parallel conducting sheets, optics of, 1292
- physical applications of, 1650
- power measurement with bolometer bridge, 2565
- technique of, (B)3152

Mine detectors, 185
- a.f., 1156
- magnetic, 1155

Mines, magnetic and acoustic, British developments, (D)[illegible]

Models, of e.m. systems, theory of, [illegible]

Modulation, (B)2007
- amplitude, of cm waves by electron beam, [illegible]
  - by electron-coupler valve at u.h.f., 2975

    - of magnetrons, spiral-beam method for, 2401
  - amplitude and phase, composite, 837
  - auto-anode, for broadcast transmitters, 2632
  - in communication, 836
  - frequency, 216, (B)529
    - application in s.w. radio technique, 2634
    - demodulation by limiter and discriminator, 1772, (A)3246
    - developments in techniques, 2633, 3549
    - by impedance valves, 1823
    - Miller circuit and its use for railroad radio, 343
    - of oscillators, 330
    - s.s.b., and wide-band f.m. television relays, 838
    - u.h.f., and coupled systems, 2475
    - use for amateur radio, 217
    - wide-band, 2362
  - frequency analysis of modulated pulses, 835
  - frequency and phase, (B)2916
  - frequency *vs* amplitude, in u.h.f. naval communication, 1504, (D)3257
  - general theory of, 2482
  - grid, linear, with feedback resistor in cathode lead, 1246
  - and keying, 2361
  - of light beam by P-type crystals, 65
  - meter, with S-scale, 2858
  - of oscillators, by resistor noise and shot effect, 3380
  - phase, circuit for, 341
  - pulse, 2636
    - conditions for pulse-splitting, 2910
    - distortion and bandwidth characteristics of, 846
    - for multiplex telephony, 845
    - spectrum of, (D)1789
  - pulse-code, 842, 843
    - demodulation methods for, 844
    - improvement of signal/noise ratio in, 2325
    - timing control for, 1788
    - use for television, (A)1785
    - 96-channel system, 516
  - pulse-count, 519
    - distortion in, 768
  - pulse-position, efficiency of information reception in, 3550
  - pulse-time, interference characteristics of, (A)1785
    - noise-suppression characteristics of, 2314
  - of resonance lines in Cs arc, 512
  - synchrodyne, of klystrons, (A)1822
  - systems, pulse, signal/noise ratios in, 502
    - for R/T transmitters, (A)1533
  - ultrasonic, of light beam, 1255, 2626
  - wide-band, with magnetron, (A)894
- **Modulators,** balanced-rectifier, (D)1224
  - broad-band, high-level, 246
  - frequency, serrasoid, 342, 2363
  - magnetron, (B)917
  - producing 10^6 0.1-μs pulses/sec, 2185
  - radar, thyratron, 2391
  - ring, h.v., 3293
    - nonlinear effects in, 2184
  - ring and Cowan, analysis and design of, (D)2944
- **Monitoring** of a.m. and f.m. broadcasting stations, legal requirements, 2859
  - systems, stability and efficiency of, 2331
- **Monitors,** for a.m. broadcast stations, (A)1713
  - for f.m. broadcasting stations, 449
  - for television broadcasting stations, 450
- **Moon,** as reflector of radar and radio signals, 1937, 2030
- **Multiplier,** electromechanical, for modulated voltages, (A)1612
- **Multivibrators,** with RC coupling, grid current in, 1902
  - symmetrical, 2181
  - theory of, 50
  - voltage-controlled, 3381

N

- **Navigation aids,** aerial, aircraft distance measurement, beacon system for, 1402, (A)1944, 2527, crystal control at 1000 Mc/s for, (A)1672
    - aircraft ground position indicator, 1396
    - aircraft ground-speed measurement by pulse-Doppler radar, (A)1672
    - beacons, rotating-field, 1946
    - for Berlin air lift, 3147
    - combination of dead-reckoning and radar data, 1395
    - course computer, 422, 3148
    - c.w., long-range, (D)402, short-distance, (D)402
    - design of multiple-function equipment for 960–1660 Mc/s, (A)1672
    - echo suppression in pulsed radar systems, 1945
    - homing beacons for naval aircraft, 99
    - H_2S, indicator for, 1679
    - landing cable, 2805
    - monitoring equipment for homing and blind approach, 159
    - multitrack radar range, 2527, 2804
    - omnidirectional radial-track guide, 100
    - requirements for civil aviation, 401
    - universal beacon system, 1080
    - v.h.f., receiver and aerial system, (A)1672
    - in wartime, 1400
    - work of Radio Technical Commission for Aeronautics, (A)1672
  - for air traffic control, 403
  - Decca, equipment for small ships, 3432
  - marine, radar, 1677, 2235
      - American views on, (A)2803
      - charts and chart matching for, 2803
      - design of, 2803
      - development of, 1942
      - experience with, 2803
      - fitting of, 2803
      - fitting and use of, 2803
      - improvement of reflections from small objects, 2803
      - operational factors, 2803
      - operational value of, 2803
      - present outlook, 2803
      - in U.S. ships, (A)2803
    - survey, 93
  - using nonsynchronous multiplex systems, (A)1672
  - radar, (B)1063
    - for ferries, 2808, Tilbury-Gravesend, 1398
    - for harbour supervision, 2803
- —— **systems,** aerial, for approach and landing, (A)1672, 2238, c.w., 96, Dimeal, (A)1672, performance criteria for, (A)1672, 330-Mc/s, characteristics of, (A)1672
    - consol, 103, 2237
    - Decca, 1401, with lane identification, 1678, 2802
    - hyperbolic, P.O.P.I., 95
    - long-range, (A)1672
    - loran, (B)106, 3434
    - omnirange, 3149, 3433, v.h.f., 3141
    - radio, review of, 1399
    - teleran, 404
  - relation between speed of indication, bandwidth and signal/noise ratio, 2232
  - R.T.C.A. recommendations, 2236
  - sonic hyperbolic, for harbours, 626
- **Network analysis,** (See also Circuit analysis)
  - with harmonic synthesiser, 2460
  - involving realizable filter functions, 666
- —— **synthesis,** for given transient conditions, 2461
- **Networks,** (See also Circuit theory; Filters; Impedance; Quadripoles)
  - active, broad-band, (A)1612
    - stability criterion for, 2463
  - amplitude and phase relations in, 1312
  - approximation in time domain, (A)1612
  - band pass, with coupled resonant circuits, (A)1612
  - bridged parallel-T, for suppressed-carrier servo systems, (A)1612
  - constant-phase-shift, 3078
  - delay, design for constant delay, 3368
    - from low-pass units, 38
  - equalizing, RC and RL, transfer functions for, 2163
  - ladder, homogeneous, finite, transients in, 965
    - reactive, 1887
  - linear, active, matrix analysis of, 2744
    - with amplitude distortion, transient response of, (A)1612
    - damped, transient response of, 653
    - theory of, (A)1612
  - mesh, symmetrical, general, theory of, 979
  - *n*-reactance, synthesis for desired transient response, 3360
  - phase and group transmission times, 1115
  - phase-simulation, for carrier system, 2752
  - phase-splitting, wide-band, 1614
  - of prescribed frequency dependence, 2-pole, 3365, 4-pole, 3367
  - quadripole, no-load, insertion and echo loss for, 984
  - RC, bridged, 3073
    - double-T, 2746
    - synthesis of, 2462
  - RC lattice, synthesis of, (A)1612
  - steady-state and transient response measurement with electrolyte tank, 2743
  - theory, Thévenin's theorem, 1615, 2741
  - topology of, (A)1612
  - transient response, 36
    - equalization of, 2166
  - transients in, (D)350
  - video, phase and insertion-loss measuring equipment, 2836
  - wide-band, pulse testing of, (D)2862
    - visual testing equipment for, (A)1713
  - 2-terminal, impedance curves of, (A)1612
    - linear, passive, energy in transient regime, 3079
    - with nonlinear resistors, 2464
    - synthesis by means of gyrators, 3364
  - 2- and 4-terminal, *Q* measurement for, 2266
  - 2*n*-terminal, transmission losses in, 1321
  - 4-terminal, circle diagrams for, (D)2150
- **Night sky,** colour variations March 1947–May 1948, 1387
  - light, spectrum of, 1386
- **Noise,** (See also Cosmic noise; Fluctuation; Solar noise; Valves) (B)2007
  - from current-carrying resistors, 3067
  - factor, direct-reading meter for, 794
    - for receivers, 505, (C)1776, theory of, (A)1769
  - fluctuation, in receivers, (A)506
  - f.m., theory of, 203
  - generators, diode, at u.h.f., 567, (D)1832
  - in linear networks, 1488
  - measurement of, 1848, 2837
    - for u.h.f. receivers, 2833
  - in photocells, 897
  - radio, world distribution of, (A)396
  - reduction, in electrometer valves, 1997
    - and range, in radar and communication, (A)509
  - r.f., from thunder clouds, 2797
  - spectrum, of diode with retarding field, 2098
  - suppression characteristics of p.t.m., 2314
  - suppressor, dynamic, for gramophone records, 625
  - thermal, in a.m. receivers, 1489
  - in triggered circuits, and spurious signals, 1777
  - valve, effect on accuracy of linear amplifiers, 1229
    - grid, induced, 249, measurement of, (D)3311
    - l.f., from amplifying valves, 574
    - theory of, 584
    - total-emission, 249
    - and transit time, (D)583, (D)3310
    - in triodes, 571
  - valve and circuit, 255
    - heater hum, reduction of, 54
- **Nonlinear systems,** transient response of, 312
- **Nuclear** physics, investigations with e.s. generator, 464
  - radiation, application to industry, (A)1639
    - detection and measurement of, (A)1639
    - effect on tissue, (A)1639

O

- **Observatories,** recent work at, 1250
- **Optical systems,** Schmidt, correction plates for, 63
- **Optics,** applications in astronomy, 1019
  - of cm e.m. waves, 1647
- **Organs,** electronic, Hammond, design of, 470
- **Oscillations,** forced, resonance curves of, 1620
    - transient effect of needle impulses, 1324
  - nonlinear, 2256
  - in oscillatory systems, graphical evaluation, 969
  - parasitic, 2172
  - plasma, 1644, 2175
  - sawtooth, 51, 2175, (B)2773
  - in systems with one degree of freedom, approximate integration for, 3058

Soldering, brazing and welding, German methods, 2253
Solids, relations between properties of, 3162
Sonar, bearing deviation indicator for, 725

  in harbour defence and landing operations, **1670**
  for submarine detection, **728**
Sound (See also Absorption; Acoustics)
  analysis, by electrical methods, **1256**
    with photoelectric spectrograph, **1844**
    with ultrasonic plate spectroscope, **2698**
  analysis and synthesis of musical notes, **3323**
  attenuation, in absorption tubes, **2695**
    in fog and smoke, **614**
  diffraction, through circular aperture, **2690**
    Kirchhoff approximation in theory of, **2691**
  energy measurement, comparison of methods, **617**
  field, of aircraft propeller, **2687**
    of circular membrane in rigid wall, **2415**
    of piston membrane, **2999**
    of point source in perfect fluid, **1839**
  intense, biological effects of, **(A)933**
  loudness matching of short tones, **3013**
  propagation, in composite media, **2686**
  in compressible media, **1565**
    within cylinders of liquid, **2688**
    ray geometry for stratified media, **2996**
  quality, masking of multiple tones by noise, **3011**
    in wire-broadcasting systems, **2424**
  radiation, into circular tube, **1608**
    from diaphragm struck periodically, **606**
    from finite cylinder, **2685**
  receivers, piezoelectric, equivalent circuit for, **3020**
  reflection, by porous media, **1850**
    from submerged plates, **611**
  sound-level meter, miniature, **2418**
  spectrum variations, subjective effect of, **3007**
  survey, **1251**, **1252**
  transmission, through homogeneous walls, **3326**
    through metal plates at oblique incidence, **2998**
    through multiple structures, **2997**
    and noise, **604**
  velocity, in air at low pressures, **3009**
    in free air, **927**
    in superheated steam, **1840**
  and vibration, **(B)279**, **(B)1575**
—— **recorders**, magnetic, G.E.C. model, **3330**
    high-quality, Model 200A, **278**
    noise in, **2710**
    portable, R.C.A. Type RT-3A, **2709**
    quality of, **(A)2423**
    35-mm, **633**
—— **recording**, B.B.C. methods, **11**
    disk, **(B)1577**, **3328**
    for broadcasting stations, **1856**
    crossover filter for cutter heads, **2470**, **3085**
    design of balanced-armature cutter head, **2131**
    high-fidelity, **(D)942**
    light-pattern meter for, **624**
    33⅓-r.p.m. 300 grooves/inch system, **277**
  on film, volume compressors for, **1270**
  magnetic, **943**, **(B)3332**
    edispot for editing, **12**
    field of ring recording head, **636**
    linear, with high-frequency excitation, analysis of, **2133**
    optimum high-frequency bias for, **635**, **3031**
    spurious printing in tapes, **3030**
    stereophonic, **2132**
    tape characteristics, **2422**, **3029**
    technique of, **3329**
  proposed distortion measurement standards, **791**
  stereophonic, for the cinema, **1846**
    for duplicating concerts, **1572**
—— **reproduction**, **632**, **(A)1563**
  contrast expansion circuits, **2171**, **(C)2753**, **(D)3086**
  disk, **3328**
    high-fidelity, **1574**
    noise suppressor, dynamic, **275**, **625**
    tracing distortion, **2705**, analysis of, **2704**
    wow measurement, **1570**
  film-scanning device, **2420**
  gramophones, record changer and complementary record, **2711**
  listeners' preferences, **1266**, **(D)2125**
  stereophonic, for the cinema, **1846**
    for duplicating concerts, **1572**
    for halls, **2703**
    magnetic, **2132**
  for television, technique of, **(A)1563**
  tone control, **944**, circuit for, **1272**
Space charge, effects in beam tetrodes, **(D)573**
  in whole-anode magnetron, **260**
Spectrometer, grating, for mm λ, **1131**
  mass, r.f., **797**
  recording, infra-red, **459**
  for λ 10 cm, with mechanical sweep, **2855**
Spectroscope, plate, ultrasonic, for sound analysis, **2698**
Spectroscopy, microwave (See also Absorption, microwave) **456**, **3125**
Speech, effect of high altitude on, **622**
  intelligibility, in deafness or loud noise, **(D)1261**
    effect of noise in dm-wave links, **2623**
  measurement of intensity distribution, **1262**
  spectra, artificial voice, **1263**
  transmission, new possibilities, **(D)274**
  visible, playback apparatus for, **3**
Stability criterion, for analogue calculators, **3348**
    for control circuits, **3347**
    for linear systems, **3127**
Stabilization, frequency, automatic, of f.m. oscillator, **26**
    of diathermy unit, **1142**
    of f.m. u.s.w. transmitters, **1221**
    microwave, **136**
    of microwave oscillators by spectrum lines, **1606**
    for railway signalling power supplies, **3265**
    of v.m. valves, **2104**
  of mains voltage, **3268**
  voltage, for electron microscope, **1805**
Stabilizers, frequency, electronic, **2335**
  voltage, **3555**
    magnetic, design of, **3264**
Standard frequency (See also Frequency)
  spectra, dense, technique of, **2570**
  transmissions, British, **134**
    WWV, reception in Turin, **135**
    from WWVH, Hawaii, **1982**
Standardization, of components by A.S.E.S.A., **2445**
Standards, (See also individual subjects)
  attenuation, microwave, **(A)1730**, **2578**
  capacitance, 0.001–5pF, **1439**
  capacitance, inductance and frequency, **1715**
  for microwave measurements, **1995**
  radio, **(A)452**
Statistics, theory of error distribution, **1939**
Stopclock, electronic, **2259**
Stratosphere, (See also Atmosphere)
  middle, O_3 content of, **(A)714**
Stratovision, for broadcasting, tests in U.S.A., **233**
Strobe principle, in radio and radar, **31**
Studios, (See also Broadcasting studios)
  for sound recording and reproduction, **2126**
Sun, angular momentum of, **695**
  recent investigations, **1651**
Sunspots, and associated magnetic and electrical phenomena, **78**
  frequency of, tables and graphs for 1749–1948, **690**
  and geomagnetic activity, **(A)1370**, **1924**
  location in 1941, **1371**
  provisional numbers, Oct.–Dec. 1947, **375**, Jan.–June 1948, **701**, July–Sept. 1948, **1037**, Oct.–Dec. 1948, **2216**, Jan.–March 1949, **3415**
  and radio reception, 1944–1947, **1035**
  relative numbers, final, for 1947, **700**, for 1948, **3414**
  in 1947, **1036**
  on 22nd Jan. 1949, and magnetic storm, **1654**
Superconductivity, **1355**, theory of, **68**
Superconductors, CbN, r.f. properties of, **2531**
  Sn, h.f. resistance of, **69**
Supports, coaxial-line, for 0–4000 Mc/s, **1582**
Surveying, with pulsed light, **2601**
Switches, channel, for television receivers, **2066**
  electronic, for diversity reception, **1878**
    speed of, **(A)1612**
    with variable period, **30**
  microwave, duplex, **(B)354**
    using secondary emission, **3358**
    Type 1B25, admittance of, **3071**
  multi-position, rectifier networks for, **1609**
Symbols, graphical, for circuits, **664**, **2164**
Synchronization, in broadcasting networks, **527**
  of controlled relaxation oscillators, **668**
  of distant transmitters and frequency standard, **2071**
  of facsimile transmitter and receiver, **2925**
  for p.c.m. receiver, **1768**
  of relaxation oscillations, **2734**
Synthesiser, harmonic, mechanical, use in filter analysis, **3373**

T

Tachometers, for high speeds, **468**
Telecommunications, amplification centres, power supplies for, **1495**
  efficiency of, **(AD)3197**
  long-distance underground lines, maintenance of, **1494**
  networks, French, **1492**, future of, **1496**
  repeater-station equipment, **1493**
  services, overseas, in Australia, **2627**

  - automatic change-over to emergency apparatus, **2323**
  - broadcast, a.m., performance with sharply-tuned aerials, **3291**, 50-kW, for KOMO station, **1222**
    - f.m., for Rural Radio Network system, **551**; WOR, **3571**; 250-W, **1220, 2939**; 50-kW, **549**
    - German, war-time development of, **2359**
    - m.f., 1-kW, **1529**; 200-kW, Swiss, **554**
    - at Villebon, Rennes and Lille, **1820**
    - 5-kW, Norwich, B.B.C., **2942, 3256**
    - 100-kW, Naples, **3292**
  - crystal-controlled, portable, for 25–32 Mc/s, **550**
  - f.m., control of frequency deviation, **3576**
    - u.s.w., frequency stabilization of, **1221**
  - frequency control of, **2070**
  - h.f., for d.f. measurements, **1941**
  - high-power, output-stage stability of, **2940**
  - keying from great distances, **1223**
  - Marconi, Type TGM.571, m.f., 500-W, **1219**
    - Types TGM. 651 and TGZ.651, m.f., 3-kW, **3289**
    - Type TGS.571, 2.5–20 Mc/s, **553**
  - pulse, for ionosphere sounding, **2069**
    - u.h.f., high-power, **2360**
  - modulation systems for, **(A)1533**
  - spark, for cm λ, **2175**
  - s.s.b., high-power, **893**
  - s.w., Type SK23A, 300-W, **552**
  - telegraphy, long-wave, valve loading and signal shape for, **2660**
    - s.w., 10-kW, **245**
  - telegraphy/telephony, for aerodromes, **270**
  - television, design of, **138**
    - WPTZ, transient-response tests on, **(A)1810**
    - for 500–900 Mc/s, **1531**
  - u.h.f., multiple operation of output valves in, **(A)1810, 2943**
- **Transmitting stations**, amateur, R.S.G.B. headquarters', GB1RS, **1796**
  - radio, Criggion, **852**
- **Troposphere**, (See also Atmosphere)
  - charts for determining refractive index of, **3422**
  - reflection of e.m. waves in, **2605**
  - sounding by radar, **1760, 3520**
- **Tuners**, f.m., fixed-frequency, **1911**
  - stub, for power division, **57**
- **Tuning devices**, 12-position click gear, **2941**

U

- **Ultrasonic** absorption. See Absorption.
  - applications, determination of elastic constants of solids, **1732**; flaw detectors, **804, 1447, 2286**; in Germany, **1461**; tinning of Al, **2282**
  - generators, (See also Generators) **2281**
    - use of $NH_4H_2PO_4$ crystals, **929**
  - interferometer with resonant liquid column, **930**
  - lenses, plastic, **3006**
  - oscillations, f.m., use for acoustic absorption measurements, **2693**
  - radiators, spherical-shell, **3003**
  - waves, generation in liquids for industrial purposes, **1442**; in liquids, modulation by e.s. field, **3321**; scattering in water by cylindrical obstacles, **609**; velocity variation with temperature, **3002**; visual demonstration of paths, **2119, 2369**
- **Ultrasonics**, **(B)1576, (B)3032**
  - and electrostriction, **1843**
  - experimental, **1842**
  - high-intensity, for biological applications, **2694**
  - intensity gain due to concave reflectors, theory, **3004**, experiment, [illegible]
  - for location of lost torpedoes, **2523**
  - opacity of porous media, **2696**
  - use for detecting infra-red radiation, **273**
  - velocity and absorption measurements in gases, **2118**
  - wave propagation in solid rods, **1567**
  - 100-kc/s transducer, **627**
- **Units**, **(D)683**
  - electrical, change from international to absolute system, **3398**
    - developments in last 100 years and change to absolute units, **3397**
    - review of, **3399**
  - e.m., and definitions, **684**
  - in Giorgi and c.g.s. systems, **1640**
  - Giorgi system, origin of, **356**
  - rationalization of, **2775**
  - rationalized Giorgi system, **1846**
    - with absolute volt and ampere, **1017**

V

- **Vacuum** gauges, hot-wire, **731, 2528**, direct-reading, **1947**
    - ionization type, **1948**
    - radiometer-type, **2240**
    - for 10^{-1} to 10^{-6} mm Hg, **730**
  - pumps, **2241**
    - molecular, design calculations for, **3154**

dielectric-filled, universal curves and permittivity measurement for, 1433
dielectric-loaded, for linear electron accelerators, 1744
disk-loaded, 2139
theory of, 1286
duo-mode exciter for, 3336
e.m. radiation from, 3041
excitation of, 946, 3036
field in, 291
higher-mode techniques for, (A)299
hybrid rings, 638
maximally flat filters in, 1320
metal, effect of slits in walls, 2429
modes in, 945
multiplex transmission through, 300
nearly circular, propagation in, 948
nonmetallic, fields in, 17
obstacle characteristics determined geometrically, 2140
open-ended, as radiators, 2432
π and H, critical frequencies of, 1285
rectangular, radiation from, (A)1578, 2433
reflections in, 2427, at capacitive diaphragm, 947, at corners, 2428, at dielectric, 3038, at sudden change of cross-section, 1858
with several dielectrics, 1288
theory of slots in, 639
reflection in, at dielectric, 1284
reflection cancellation in, 3037
slotted-line sections, new type, (A)2716
slotted sections, design for u.h.f., 2567
for slow waves, 1584, (D)3337
standard dimensions for, U.S., 2861
theory of, 3335
theory of propagation in, 296
transmission in, 3035
Wavemeter, for Citizens' Radio, 3482
resonant-cavity, for spectrum of pulsed transmitters, 1130
Waves, boundary-layer, optical, evidence for, 3116
e.m., (B)1562
cm-λ, optics of, 1647, radiation pressure of, 1759
diffraction from ionosphere and fading, 193
diffraction from meteor trails, 2508
fundamentals of, (B)1838
interaction in ionosphere, 194, (A)486
paths and absorption in reflecting layer, 1050
plane, in ionized gas, 2785, polarization representation, (A)1639
reflection and transmission by spherical shell, 2503
in region between mm λ and long-wave infra-red, 1026
slow, in cylindrical waveguides, (D)641
standing, 2723
type H_0, propagation theory, 2141
v.h.f., reflection from meteoric ionization, (D)489
0.1-mm, generation of, 2175
integral and series representations of, 2774
pressure, plane, steep-fronted, theory of, 2684
spherical, reflection of, 3117
Welding, r.f., of plastics, 3451
Wire, copper, iron-free, for moving-coil galvanometers, 1998
enamelled, microscopic examination of, 114
Wobbulator, self-checking, 2005
for television receiver testing, 155
Wind, measurement by radio d.f. methods, 1070

X

X-ray applications, thickness gauge, 2579, 2580
X-rays, diffraction camera, 1752
from 20-MeV betatron, spectrum of, 180

ERRATA

In "Abstracts and References" throughout the year.

Abstract	No.	219	For R. R. Wakeman read R. P. Wakeman.
,,	,,	220	Insert as authors M. Silver & H. French.
,,	,,	379	For R. G. Gebhardt read R. E. Gebhardt.
,,	,,	572	In last line, for " ow " read " low."
,,	,,	698	In title, for " pertubations " read " perturbations."
,,	,,	989	For Kleinwachter read Kleinwächter.
,,	,,	1190	In last sentence, for " letter " read " latter."
,,	,,	1253	For R. G. Bolt read R. H. Bolt.
,,	,,	1349	Title should read " The Absorption of Water Vapour in the Far Infra-Red ". Journal reference should be *Rep. Progr. Phys.*
,,	,,	1422	For correct title, see abstract No. 1976.
,,	,,	1727	Cancel the last sentence.
,,	,,	1964	For M. H. de Longchamp read M. Huot de Longchamp.
,,	,,	2165	For J. H. Mulligan read J. H. Mulligan, Jr.
,,	,,	2922	Add 4s. 6d. at end.
,,	,,	3152	For J. N. Sturtevant read J. M. Sturtevant.
,,	,,	3434	For M. Portier read Portier.

U.D.C. Changes

Calculating Machines 681.142
Glass-to-Metal Sealing 666.1.037.5
Pickups 681.85
Waveguides 621.392.26†

LIST OF JOURNALS

A selection of the journals which are regularly scanned is given below, together with the addresses of publishers or editorial offices and the abbreviations of titles as used in the Abstracts and References. Applications for copies of any journal should be made to the addresses given.

The full title of each journal is given first and is followed by the address, the abbreviated title being shown within parentheses. In a few cases the nature of a journal is indicated, where neither the title nor the address shows it clearly.

A

Acta Polytechnica, Royal Swedish Academy of Engineering Sciences, Stockholm, Sweden. (*Acta polyt., Stockholm*)

Alta Frequenza, Associazione Elettrotecnica Italiana, Torino 116, Corso Massimo d'Azeglio 42, Italy. (*Alta Frequenza*)

American Journal of Science, 501, Sterling Tower, New Haven, Conn., U.S.A. (*Amer. J. Sci.*)

Analytical Chemistry, American Chemical Society, 1155, Sixteenth St., N.W., Washington, D.C., U.S.A. (*Anal. Chem.*)

Annalen der Physik, Johann Ambrosius Barth, Leipzig C 1, Salomonstrasse 18B, Germany. (*Ann. Phys., Lpz.*)

Annales de Physique, Masson & Cie, 120, Boulevard Saint-Germain, Paris 6e, France. (*Ann. Phys., Paris*)

Annales de Radioélectricité, 23, rue du Maroc, Paris 19e, France. (*Ann. Radioélect.*)

Annali di Geofisica, Istituto nazionale di Geofisica, Città universitaria, Roma, Italy. (*Ann. Geofis.*)

Applied Scientific Research, Martinus Nijhoff, The Hague, Holland. (*Appl. sci. Res.*)

Archiv der elektrischen Übertragung, Wiesbaden-Biebrich, Mühlweg 2, Germany. (*Arch. elekt. Übertragung*)

Archiv für Elektrotechnik, Springer Verlag, Berlin-Charlottenburg 2, Jebensstrasse 1, *or* Heidelberg, Neuenheimer Landstrasse 24, Germany. (*Arch. Elektrotech.*)

Archiv für technisches Messen, Leibniz Verlag, München, Lotzbeckstrasse 2b, Germany. (*Arch. tech. Messen*)

Arkiv för Matematik, Astronomi och Fysik, published for Royal Swedish Academy of Sciences by Almqvist & Wiksells Boktryckeri A.-B., Stockholm, Sweden. (*Ark. Mat. Astr. Fys.*)

A.S.T.M. Bulletin, 20th and Northampton Streets, Easton, Pa, U.S.A. (*A.S.T.M. Bull.*)

Astrophysical Journal, University of Chicago Press, 5750, Ellis Avenue, Chicago 37, Illinois, U.S.A. (*Astrophys. J.*)

Audio Engineering, Radio Magazines Inc., 28, Renne Avenue, Pittsfield, Mass., U.S.A. (*Audio Engng, N.Y.*)

Australian Journal of Instrument Technology, 414, Collins St., Melbourne, Australia. (*Aust. J. Instrum. Tech.*)

Australian Journal of Scientific Research (Series A), 314, Albert Street, East Melbourne, C.2, Australia. (*Aust. J. sci. Res., Ser. A*)

Avtomatika i Telemekhanika, Academy of Sciences, U.S.S.R. (*Avtomatika i Telemekhanika*)

A.W.A. Technical Review, Amalgamated Wireless (Australasia) Ltd, Sydney, Australia. (*A.W.A. tech. Rev.*)

B

B.B.C. Quarterly, The British Broadcasting Corporation, The Grammar School, Scarle Road, Wembley, Middlesex, England. (*B.B.C. Quart.*)

Beama Journal, The British Electrical and Allied Manufacturers' Association, 36, Kingsway, London, W.C.2, England. (*Beama J.*)

Bell Laboratories Record, 463, West Street, New York 14, N.Y., U.S.A. (*Bell Lab. Rec.*)

Bell System Technical Journal, American Telephone and Telegraph Company, 195, Broadway, New York, N.Y., U.S.A. (*Bell Syst. tech. J.*)

British Journal of Radiology, 32, Welbeck Street, London, W.1, England. (*Brit. J. Radiol.*)

Brown Boveri Review, Artillery Mansions, 75, Victoria Street, London, S.W.1, England. (*Brown Boveri Rev.*)

Bulletin de l'Académie des Sciences de l'U.R.S.S., (*a*) **série physique,** (*b*) **série géographique et géophysique,** (*c*) **classe sciences techniques,** Academy of Sciences, Moscow, U.S.S.R. (In Russian.) (*Bull. Acad. Sci. U.R.S.S.,* (*a*) *sér. phys.,* (*b*) *sér. géogr. géophys.,* (*c*) *tech. Sci.*)

Bulletin of the American Meteorological Society, Executive Secretary, K. C. Spengler, 5, Joy Street, Boston 8, Mass., U.S.A. (*Bull. Amer. met. Soc.*)

Bulletin de l'Association suisse des Électriciens, 301, Seefeldstrasse, Zürich 8, Switzerland. (*Bull. schweiz. elektrotech. Ver.*)

Bulletin de la Société française des Électriciens, 8–14, Avenue Pierre-Larousse, Malakoff (Seine), France. (*Bull. Soc. franç. Élect.*)

Bulletin technique de la Suisse romande, F. Rouge & Cie, Lausanne, Switzerland. (*Bull. tech. Suisse romande*)

C

CQ, Radio Magazines Inc., 342, Madison Avenue, New York 17, N.Y., U.S.A. (*CQ*)

Câbles et Transmission, Sotelec, 16, Rue de la Baume, Paris 8e, France. (*Câbles & Transmission, Paris*)

Canadian Journal of Research (Sections A, B, and F), National Research Council, Ottawa, Canada. (*Canad. J. Res.*)

Chalmers tekniska Högskolas Handlingar, (Transactions of Chalmers University of Technology), N. J. Gumperts Bokhandel, Göteborg, Sweden. (*Chalmers tekn. Högsk. Handl.*)

Communications, Bryan Davis Publishing Co. Inc., 52, Vanderbilt Avenue, New York 17, N.Y., U.S.A. (*Communications*)

Communications on Pure and Applied Mathematics, Interscience Publishers Inc., 215, Fourth Avenue, New York 3, N.Y., U.S.A., and 2a, Southampton Row, London, W.C.1, England. (*Commun. pure appl. Math.*)

Communication News, Philips Telecommunication Industries, Hilversum, Holland. (*Commun. News*)

Comptes Rendus hebdomadaires des Séances de l'Académie des Sciences, Gauthier-Villars, Quai des Grands Augustins 55, Paris, France. (*C. R. Acad. Sci., Paris*)

Comptes Rendus (Doklady) de l'Académie des Sciences de l'U.R.S.S., Academy of Sciences, Moscow, U.S.S.R. (In Russian.) (*C. R. Acad. Sci. U.R.S.S.*)

D

Distribution of Electricity, 51/53, Hatton Garden, London, E.C.1, England. (*Distrib. Elect.*)

E

Electrical Communication, International Telephone and Telegraph Corporation, 67, Broad Street, New York 4, N.Y., U.S.A. (*Elect. Commun.*)

Electrical Engineering, Journal of the American Institute of Electrical Engineers, 20th and Northampton Streets, Easton, Pa, U.S.A. (*Elect. Engng, N.Y.*)

Electrical Manufacturing, 1250, Sixth Avenue, New York 20, N.Y., U.S.A. (*Elect. Mfg, N.Y.*)

Electrical Review, Dorset House, Stamford Street, London, S.E.1, England. (*Elect. Rev., Lond.*)

Electrical Times, Sardinia House, Sardinia Street, London, W.C.2, England. (*Elect. Times*)

Electrician, Bouverie House, 154, Fleet Street, London, E.C.4, England. (*Electrician*)

Electronic Engineering, 28, Essex Street, Strand, London, W.C.2, England. (*Electronic Engng*)

Electronics, 99-129, North Broadway, Albany 1, N.Y., U.S.A. (*Electronics*)

Électronique, 21, rue des Jeûneurs, Paris 2e, France. (*Électronique*)

Elektron, Linz, Anastasius-Grün-Strasse 4, Austria. (*Elektron, Linz*)

Elektron in Wissenschaft und Technik, Hanns Reich Verlag, München 13, Ainmillerstrasse 25, Germany. (*Elektron Wiss. Tech.*)

Elektrotechnik, Berlin, N.W.7, Dorotheenstrasse 41, Germany. (*Elektrotechnik, Berlin*)

Elektrotechnik und Maschinenbau, Journal of the Elektrotechnischer Verein Österreichs. Springer Verlag, Wien 1, Mölkerbastei 5, Austria. (*Elektrotech. u. Maschinenb.*)

Elektrotechnika, Journal of the Magyar Elektrotechnikai Egyesület. Budapest 5, Honvéd-utca 22, Hungary. (*Elektrotechnika, Budapest*)

Elektrotechnische Zeitschrift, Georg Westermann Verlag, Braunschweig, Riddagshäuser Weg 66, Germany. (*Elektrotech. Z.*)

Section V—1950

Index to

Abstracts and References

This section contains an index, listed separately by author and by subject, for all Abstracts and References published in PROCEEDINGS OF THE IRE from February, 1950, through January, 1951.

AUTHOR INDEX

AUTHOR INDEX—A name followed by "and" is that of the first author of a jointly written paper, while the word "with" indicates that the name indexed is that of the second author.

A

Abbott, F. R., and C. J. Fisher, graphical analysis of radiation patterns of u.h.f. aerial, **2720**
Abbott, N. A., electrical telemetry, **183**
Abele, J., design of nonlinear sine-wave oscillators, **323**
Abraham, L. G., L1 coaxial telephone and television system, **739**
Abramson, M., and S. Danko, miniaturization techniques, **(A)1355**
Acker, M., and B. Goldberg, comparison of modulation methods for radio facsimile, **(A)1511**
Ackermann, P., with others, Swiss radiosonde, **949**
Adam, M., transistor and transistron, **3210**
Adams, G. D., D. W. Kerst and C. S. Robinson, performance of 300-MeV betatron, **(A)2594**

Zenner, R. E., magnetic-recording frequency-response measurements, **(A)1319**
Zepler, E. E., interelectrode capacitance of valves, **1313**; Technique of Radio Design, **(B)2019**
Zickner, G., calibration curve for parallel-plate capacitor, **168**; temperature coefficient of standard air capacitors, **1729**
van der Ziel, A., noise suppression in triode amplifiers, **2751**; semiconductor noise and flicker effect, **3035**; thermal noise at high frequencies, **2334**; total-emission damping in diodes, **2087**; transit-time formulae, **792**
—— and K. S. Knol, power gain and bandwidth of feedback amplifiers, **1646**
—— with T. R. Hartz, square-wave modulation in microwave spectroscopy, **1905**
Ziemau, S., with others, properties of slow electrons in polar dielectrics, **1899**
Zucker, R. S., with R. A. Ratcliffe, mobile f.m. communication equipment, **750**
Zuhrt, H., rigorous theory of tubular dipole aerials, **2977**
Zwikker, C., and C. W. Kosten, Sound-Absorbing Materials, **(B)2704**
Zyda, J., with J. Brundage, transmission-measuring set for l.f. carrier systems, **157**
Zimmermann, K. H., balanced r.f. twinax cables, **26**
Zimmermann, W., multichannel common-carrier R/T equipment, **3164**
Zinke, O., exponential transmission line as transformer, **836**; Hochfrequenzmesstechnik, **(B)173**; wide-band aerials, and resonant compensation circuits, **818**, omnidirectional, for metre and decametre waves, **817**

SUBJECT INDEX

SYMBOLS (A) Abstract, (B) Book Review, (C) Note of Correction, (D) Discussion

A

Abacs, for output-transformer design, **826**
for r.f. transmission lines, **808**
for temperature compensation of oscillatory circuits, **1373**
transfer, for low-pass iterative filters, **576**
Absorption, (See also Acoustics; Ionosphere)
acoustic, of various materials, **1566**, measurements of, **2404**
infra-red, in Si and Ge, **(A)2469**
ionospheric, by parabolic layer for oblique incidence, **1154**
microwave, of non-polar liquids, **1669**
of polar substances in non-polar solvents, **1670**
of r.f. waves in solar corona, **1398**
u.h.f., in organic liquids, **609**
and reflection, by sea water, **1904**
ultrasonic, in liquids, **1324**, f.m. method of measurement, **2116**
optical measurement of, **7**
in organic liquids, **1056**
in water and in salt solution, **528**
Acceleration meter, piezoelectric, **413**
Acoustics, (See also Absorption; Broadcasting; Impedance; Sound; Ultrasonics)
absorptive materials, properties of, **2694**
anisotropic materials, ADP and KDP crystals, properties of, **1049**
artificial ear, of C.N.E.T., **1564**
of G.P.O. and of I.N.U.A., **1565**
artificial mouth for equipment tests, **1058**
bibliography, **1, 521, 1047, 1838, 2395, 2682**
of broadcasting studios, **1847**
with adjustable reverberation time, **2407**
reverberation-time measurements in Radiodiffusion française studios, **2962**
combination tones, **560**
of conical pipes, **524**
equipment design for reverberant auditoria, **(A)1319**
of halls, intelligibility ratio as quality criterion for, **1331**
with large reverberation times, **534**
reverberation modulation, **2963**
prevention of feedback between loudspeaker and microphone, **2968**
reciprocity pressure response formula, **1062**
of rooms, **(A)533**
calculation of, reverberant absorption coefficient from acoustic impedance, **1846**
effect on intelligibility, **2966**
investigation by models, **2695**
pulse statistical analysis of, **2406**
for transient sounds, **2405**
schlieren apparatus with multi-slit gratings, **1563**
of telephone bells, **1325**
test chamber for loudspeakers and microphones, **1326**
trends in a.f. technique, **801**
white noise, applications of, **2399**
Adhesive, thermosetting, araldite, use in crystal-oscillator production, **913**
Admittance meter, **2834**
Aerial arrays, broadcasting, directive, WDGY, **2431**
m.f., design of, **(C)40**
circular and cylindrical, radiation patterns of, **(A)1338**
dipole, radiation impedance of, **2725**
directive, compensators for, **1868**
square, radiation patterns and gain of, **554**
triplet-reflector, **1342**
——**systems**, gain of, **287, (D)820, (C)1086, (D)1592, (D)2135**
Aerials, (See also Couplers; Lenses, microwave; Television; Transmission lines; Waveguides)
aircraft, flat-plate, shunt-fed, **1591**
'suppressed', **286**
biconical, theory of, **816**
broadcasting, anti-fading, **1863, (C)2716**
f.m. and television, Atlanta, U.S.A., on 1000 ft mast, **2722**
m.f., **38**
car, for amateur bands, **2132**
channel-guide, **2718**
conical-horn, e.m. field of, **2979**
radiation characteristics of, **1590**
wide-angle, input impedance of, **288**
coupled, theory of, **1585**
crossed-dipole, input impedance of, **2427**
current and charge distributions on, **(A)1338**
cylindrical, with axial-slot excitation, surface currents in, **2196**
inhomogeneous, guided waves on, **(A)1338**
with 2-wire centre feed, input impedance of, **1580**
A, multiwire, 600-Ω, for ionosphere recorders, **2975**
dielectric-rod, radiation patterns of, **(A)1867**
dielectric-tube, **(A)1338**
dipole, folded, impedance transformation in, **556**
horizontal, low, input impedance of, **2134**
impedance measurement by reflection method, **811**
$\lambda/4$, effect of ground plane on, **(A)2423**
theory of, **2978**
tubular, rigorous theory of, **2977**
directional characteristic curves and surfaces for, **2981**
directive, microwave, **1869**
rhombic, rotatable, **2429**
wide-band, for 50–170 Mc/s, **(A)1338**
dummy, transmission-line, high-load, **2577**
for elliptical and linear polarization, radiation efficiency of, **(A)1338**
for elliptically polarized waves, **1341**
feeders for, use of circle diagrams in design of, **837**
geometry and impedance characteristics of, relation between, **(A)1338**
helical, construction of, **1083**
current distribution in, **(A)1338**
design of, **555**
effect of conductor size, **283**
end-loaded and expanding, **2715**
horn, microwave, measurement of radiation patterns of, **2183**
loop, response measurement for, **(A)1338**
microwave, distant field of, diffraction effects on, **2422**
omnidirectional, wide-band, for metre and decametre waves, **817**
and open-wire lines, **281, 399**
parallel, coupled, mutual- and self-impedance of, **2136**
phase-front measurements, ripple tank for, **1979, 2841**
polar diagram of, model technique for, **558**
polar diagram and aperture distribution of, relation to angular spectrum of plane waves, **1082**
properties of, **282**
receiving, directive properties of, **2424**
protection from effects of local fields, **1586**
reflector, linear, e.m. field of, **2714**
microwave, small-surface diffraction theory for, **2721**
parabolic, calculations for, **1343**
short, limitations of, **553**
theory of, **35**
slot, combined with resonant circuit, **2709**
impedance/frequency characteristics of, **1087**
as magnetic dipoles for cm waves, **2712**
radiation from transverse slot, **1589, 2980**
theory of, **2711**
slotted-cylinder, external field of, **1588**
impedance and radiation characteristics of, **2710**
slotted waveguide, **814**
spherical-reflector, with phased line source, **2713**
television, phase-control, for co-channel interference reduction, **2655**
receiving, built-in, **819, 2719**, Philco model, **37**
design trends, **1085**
quadrature-phased, **557**
transmitting, u.h.f., with feeder system, **2425**; supergain, **36, (A)1338, 1865**

tower, voltages on guy-wire insulators, **1340**
transmitting, linear, effective length of, **1584**
transmitting and receiving, current distribution in, **2976**
turnstile, shielded, radiation characteristics of, (**A**)**1866**
u.h.f., radiation patterns of, graphical analysis of, **2720**
vertical, radiation characteristics over uneven ground, **39**
v.h.f., for radio ranges and d.f., (**A**)**1338**
wide-band, and compensation circuits, **818**
impedance of, **285**
m- and dm-wave, **2426**
Alloys, (See also Ferromagnetic materials; Magnetic materials)
Be/Cu, **2254**
Cr/Fe, for cones of c.r. tubes, tests of, **1181**
Fe/Si compacts, resistivity measurements for, **671**
filamentary, hot-strength of, (**A**)**1554**
Pd-base, magnetic properties of, **1174**
Altimeter, electronic, **192**
radio, **897**
mechanical development of, **1837**
Ammeters, critically damped, measurement of time constant of, **2831**
electrodynamic, v.h.f., **2832**
Amplidyne, performance and design of, **239**
regulation of torque and speed by, **238**
Amplification, distortionless, of d.c. pulses with a.c. amplifier, **2753**
in double-beam valves, **511**
high-efficiency, of modulated oscillations, **1385**
by interaction between electron beams, **333**
by interaction of wave with electron stream, **608**
power, electrical, modern methods of, **2457**
of very-low-frequency currents, **1640**
of weak d.c., using Hall effect, **3007**
Amplifiers, a.f., **2123**
with combined positive and negative feedback, **1390**
high-fidelity, **1641**
high-quality, **70**, **335**, (**D**)**857**, **1119**
output impedance control for, **1070**, (**D**)**1336**, (**D**)**1337**
power, cathode-follower, **599**
public-address, efficiency of output valves in, **75**
push-pull, **1118**
Rauland 1825, **1642**
selective, **1644**, RC, **1643**
simplified design of, **72**
50-W, new circuit for, **592**
a.g.c. for, **3010**
aperiodic, wide-band, **331**
bandwidth control in, **860**
for biological applications, **74**
cathode-coupled, design of, **2456**
cathode-feedback, maximum feedback in, **3012**
cathode-follower, **2749**
cathode-repeater, wide-band, **2168**
class-C, tank-capacitor voltage in, **2460**
cm-wave, noise measurement for, **930**
contact-modulated, **591**
d.c., **1889**
for biological research, (**A**)**955**, **2174**
with cross-coupled input circuit, **1122**
using electrometer valve, **1121**
negative-feedback, with grid-controlled valve converter, **2561**
wide-band, zero stabilization of, (**A**)**598**
for oscillography, **2838**
differential, improvement of rejection ratio in, **3008**
transmission factor of, **1636**, (**D**)**2169**
direct-coupled, ultra-high gain, (**A**)**1355**
distributed, band-pass, analysis and design of, (**A**)**1355**
measurements on, **2750**
wide-band, (**D**)**332**
dm-wave, German developments in, **329**
electronic, (**A**)**1998**
feedback, conditional stability of, **862**
general formulae for, **2462**
power gain and bandwidth of, **1646**
RC, **859**
and servo systems, theory of, **2175**
stability testing with square waves, **77**
German work on, **330**
i.f., gain stabilization by inverse feedback, **2461**
stagger-tuned, design of, **3009**
for television, **3191**
line, for K2 carrier system, **314**
linear, constant-gain, use of frequency changers in, **297**
input and output admittances of, **1116**
negative-feedback, for use with long coaxial cable, **3013**
for use with ionization chamber, **1888**
l.f., selective, **596**, **1120**, (**C**)**1645**, flicker effect in, **1120**
magnetic, (See also Transductors) **43**, (**D**)**45**, **46**, **47**, **1348**, **1598**, (**A**)**1998**, **2728**
analogue-computer study of, **2731**
analysis of transients and feedback in, **1873**
balance-detector type, (**A**)**2139**
and Barkhausen noise, **298**
effect of supply frequency on performance of, **44**, (**D**)**563**
as frequency control for alternator, (**A**)**2355**
self-saturable, analysis and design of, (**A**)**1355**
self-saturation in, (**A**)**565**
for temperature regulators, **2990**
theory of, **1597**, (**A**)**1599**, **2729**, **2730**
magnetron, new type, **1829**
multi-stage, amplification and bandwidth for, **861**
negative-feedback, **863**, (**D**)**1123**
conditions for critical damping, **2464**
design of, **2176**
wide-band, transients in, **78**
with negative-resistance load, **2170**
nonlinear, **2748**
power, grounded-grid, **593**
pulse, fast, **73**
for use with ionization chamber, signal/noise ratio in, **1687**
push-pull, phase inverter for, **1387**
RC, theory of, **597**
selective, using RC feedback networks, **3011**
semi-distributed, theory of, **1635**
stagger-tuned, design of, **856**, (**A**)**1355**
low-pass, **1114**
television. See Television.
transient-response calculation for, **2172**
travelling-wave, chain, 200-Mc/s bandwidth, **594**, **595**, **2048**
triode, noise suppression in, **2751**
wide-band, cathode neutralization of, (**C**)**339**
design chart for, **2173**
matching to cm-wave self-oscillator, **2148**
for oscilloscopes, **1723**
phase-error compensation in, **2752**
use of secondary-emission valves in, **336**
400-Mc/s, using Type SN-978B r.f. pentode, (**A**)**1355**
Analogies, band-pass/low-pass, theory of, **61**
Analogues, electrical, of linear systems, (**A**)**834**
Analysers, a.f., applications of, **2280**
with rapid automatic scanning, **936**
harmonic, giving Fourier coefficients, (**A**)**674**
intermodulation, for a.f. systems, **2840**
pulse-amplitude, **1448**
video-frequency, for noise spectra, **165**
Anemometer, acoustic, with c.r.o. display, **950**
hot-wire, for low speeds, **972**
Astronomy, radio, (See also Cosmic noise; Solar radiation)
review of, **91**
Atmosphere, (See also Ionosphere; Stratosphere; Troposphere)
ozone measurements, **1912**
pressure and temperature gradients over central Europe, **940**
refractive-index fluctuations, microwave recording of, **2565**
stratification of, **2219**
total O_3 content and troposphere temperature, **625**
tropopause fluctuations, **624**
upper, distribution of O and O_2 in, **1149**, (**A**)**1913**
meteor ionization in, (**A**)**1410**
review of present knowledge of, **94**
temperature distribution over New Mexico, **2214**
winds in, meteor-trail-echo study of, **3052**
Atmospheric electricity, field variations at Monaco, **1687**
measurement of vertical electric field, **140**
Atmospherics, **361**
in Antarctic, large-scale variation of level of, **97**
London University research on, **2216**
in North and South Canada, level of, **3048**
recorder for, **2282**
sudden increases on long waves, **1499**
Type-4, fine structure of, **2508**
waveforms of, **893**
Attenuation, determination from impedance measurements, **3094**
of plane waves by obstacles, **601**
Attenuators, microwave, **600**
high-power, for 1–10 kMc/s, **2843**
piston, calibrated, for mm λ, **1193**
corrections for, **280**
theory of, **813**, (**C**)**1582**
TM-mode, design of, **1976**
for waveguides, high-power, **864**
magnetically controlled, **337**
Audiometer, Type TF895, **800**
Audiometry, (See also Hearing)
watch as noise source for, **1064**
Aurora, radar reflections from, **1688**
and sky waves in 1947, **728**
10-cm radiation from, origin of, **2776**

B

Barium titanate. See Ferroelectric materials.
Batteries, accumulator, light-weight, Ag/Zn, **1255**
military, recent developments in, **2904**
recent patents on, **3177**
primary cells, internal resistance and electrolytes of, **1011**
Beacons. See Navigation aids.
Betatrons. See Particle accelerators.
Bolometers, cavity-resonator, wide-band, for λ 10 cm, **167**
Book notices and reviews, on mathematics, physics, electronics, radio communications, etc., recent publications, **1893**
Abriss der Dauermagnetkunde, **1947**
Acoustic Measurements, **1857**
Acoustical Designing in Architecture, **2705**
Advances in Electronics, Vol. 2, **2006**
Aerials for Centimetre Wavelengths, **2432**
Aerials for Metre and Decimetre Wavelengths, **822**
Anwendung der elliptischen Funktionen in Physik und Technik, **2820**
Applications of the Electronic Valve in Receiving Sets and Amplifiers **991**
Applications physiques de la Transformation de Laplace, **990**
Applied Mathematics for Engineers and Scientists, **1716**
The A.R.R.L. Antenna Book, **1346**
Atmospheric Electricity, **98**
Basic Electrical Engineering, **2952**
Basic Electronics, **974**
Basic Television, **772**
Calcolo Tensoriale e Applicazioni, **2268**
Cathode-Ray Tube Traces, **2298**
Communication Circuit Fundamentals, **1891**
Communication Circuits, **1650**
Compléments de Mathématiques à l'Usage des Ingénieurs de l'Électrotechnique et des Télécommunications, **888**
Cosmical Electrodynamics, **2777**
Counting Tubes, **2319**
Dizionario Tecnico della Radio, **1317**
Einführung in die Lehre von den Schwingungen und Wellen, **882**
Einführung in die Siebschaltungstheorie der elektrischen Nachrichtentechnik, **1651**
Einführung in die Theorie der Spulen und Übertrager mit Eisenblechkernen, **341**
Elastomers and Plastomers: their Chemistry, Physics and Technology, **3078**

  reciprocity between generalized mutual impedances, 1258, 2444
Circuits, (See also Networks)
  beam-switching, for c.r.o., 1091
  cathode-follower, as a.f. power amplifier, 599
    analysis of, 1386
    graphical study of, 1639
    input-capacitance reduction for, 858
    output, 1115
  coincidence and mixing, Ge-diode, 1958
  compensation, resonant, for wide-band aerials, 818
  control, design with aid of circle diagrams, 1594
  correction, complex, for television amplifiers, 1369
  coupled, resonance frequencies and characteristics of, 1625
    triple-tuned, high-Q, analysis of, 2745
  differentiating and integrating, RC, time constants of, 1103
  equalizer, reactive, design of, 846
  equivalent, for linear a.c. elements, 2983
    for slots in rectangular waveguide, (A)1338
  feedback, mathematical analysis of, 2443
  flip-flop, cathode-coupled, operating conditions for, (D)1106
  gate, diode, design of, (A)1441
  input, low-noise, design factors for, 1504, (C)2018, (D)2619
  integrating, Miller, low-speed, 1111, (C)1631
    transitron, 852
  integration method of linearizing exponential waveforms, 328
  linear, lumped-constant, time constants for study of, 1607
  linear varying-parameter and nonlinear, analysis for, 1606
  matching, for magnetron modulator, 552
  multiplying, fast, (A)2558
  multivibrator, asymmetrical, 3006
    recent developments of, 1886
  negative-resistance, characteristics of, 2137
  oscillatory, abac for temperature compensation of, 1378
    with discontinuous linear characteristic, oscillation phenomena in, 2447
    nonlinear, phenomena in, 582, theory of, 306, 581, 847
    with periodically variable resistor, 3001
    RC, response to multiple pulses, 64
    resonance-curve calculations for, 316
  output, RC-coupled, conditions for maximum output, 1888
  phase-inverter, for push-pull amplifiers, 1387
  p.w.m., 854
  rectifier, square-law, for meters, 3096
  resonant, detuned, transient response of, 1102, (D)1374
    with time-varying parameters, 583
  response to repeated pulses, 561
  scaler, high-speed, 2587
  smoothing, LC, 58
  sweep, panoramic, 68
  switching, electronic, speed of, 1353
  tank, as dm-λ resonators, 65
    v.h.f., transmission-line, 79
  trap, absorption, design of, 841
  trigger, magnetic, 2437
    transistor, 53, (A)1355
  valve, 'G'-curves for design of, 292
Clocks, quartz-crystal, 2274
    development of, 135
    monitoring by means of time signals, 922
    P.T.R., and the length of the astronomical day, 2275
  synchronization by means of time signals, 1446
Clouds, height measurement by means of light pulses, 427
Clutches, magnetic-fluid, 969, 2585
    for servomechanisms, 237
Coils, choke, premagnetized, permeability of, 568
  ferrite-cored, as converters, amplifiers and oscillators, 51
  iron-cored, distortion with, 829
  with pot cores of powdered iron, magnetic characteristics of, 3078
  solenoid, inductance calculation for, [illegible]
    magnetic field in, 1700
    single-layer, inductance formula for, 52
      screened, losses in, 2852
  stranded-wire, h.f. resistance of, 802
  for television receivers, design of, 587
  toroidal, inductance of, 1874
  universal winding machine and winding patterns for, [illegible]
Communication, theory of, 1241; 1764, 3154; 3155
    application of correlation functions, 2262
    application to periodic radio systems, (A)1511
    for asynchronous multiplex systems, 1767
    and multiplex operation, 3156
    in presence of noise, 1512, 2338
    statistical, 2888
    Wiener's, extension of, 2806
——**equipment**, (See also Receivers; Transmitters)

  d.c./a.c., for h.f. induction heating, 952
    for servosystems, 754
Cores, laminated, magnetic after-effect for weak alternating fields, 1948
Corrosion, of Cu wires in contact with insulating materials, 3066
Cosmic noise, r.f., from galaxy, (A)356, 614, 3040, from Taurus A, 887
    point sources of, 1405
——**theory**, hydromagnetic equations, derivation of, 2770
Counters, argon, pulses in, 3126
  auxiliary apparatus for, 3122
  crystal, 2860
    diamond, effect of light on, 1202, 3124, γ-ray, phenomena in, [illegible] (A)2602
    Ge, 1987
    theory of, 879
  electrical, design of, (A)955
  electronic, direct-reading, 1090
  G-M, for civilian defence use, 2861
    dead time and recovery time in, 2864
    electric field in, 1986
    electron mobilities in, 178
    equipment for use with, 698
    glass-walled, with external cathode, 699
    in industrial radiology, 1203
    ion mobilities in, 700
    for lecture use, 2603
    portable, 1200
    quenching circuit for negative h.v. supply, 179
    self-quenching, dead times of, 948, plateau slopes in, 1984, temperature dependence of, 702, 1983
    small, 1732, for biological application, (A)955
    speed of, 180
    spurious counts in, 701, 2862
    time lags in, 1985
    velocity of discharge propagation in, 1982, 2863
  high-pressure, and their uses, 3125
  l.v., theory and properties of, 2859
  operation of, thyratron circuit for, 3120
  parallel-plate, spurious discharge in, 1201
  proportional, BF_3-filled, 3127
    fluctuations in, 1468
    for measurement of soft radiation, (A)955
    stabilizer for, 1199
  pulse, decade, 830, for G-M tubes, 2144, with neon indicators, 2733
    with scaling-down circuit, 831
  with pure-vapour filling, 3121
  ring, 3-decade, using neon diodes, 832
    using pentodes, 2145
  scintillation, for α-particles, 2858
    using transistors, 1092
Couplers, aerial, Π-network, design of, 571, (C)1363
  directional, coaxial, with circular coupling hole, 1611
    for impedance measurement at u.h.f., 1720
    microwave, 1081
Coupling, output, of valve oscillators for industrial heating, 1376
Crystals, (See also Piezoelectric crystals; Quartz)
  electron scattering in, 3031
  ionic, dielectric constant of, 381, 1656
  non-polar, deformation potentials and mobilities in, 3032
  one-dimensional, electronic properties of, 878
  tensor expression for optical, electro-optical and photoelastic effects in, 2745
Current distribution, in cylinders, and temperature distribution, 350
  measurement, a.c., compensator for, 152
    with ammeter of zero apparent resistance, 2560
    d.c., 1–10 kA, 1455
Cyclotrons. See Particle accelerators.

D

Demodulation, of f.m. carrier and random noise by discriminator, 448
Designing, industrial, cost reduction in, (A)1559
    evolution of, (A)1559
    procedure in, (A)1559
    sales attitude towards, (A)1559
Detectors, crystal, use as mixers, 1634
  f.m., beam-deflection valve for, 224
  linear, signal/noise ratio of, 221
  ratio, theory of a.m. rejection in, (A)1501
  r.f., CbN superconductor as, 223
  Si-crystal, theory and experiment, 788
  standing-wave, loading effects of, 691
    microwave, 688
  synchronous, 222
Diamond, (See also Counters, crystal)
  electron-bombardment conductivity of, 1673
  mobility of electrons and holes in, 3123
  photoelectric properties of, 3055
  use for gramophone styli, 2702
Dielectric constant, of air, at λ 10 cm, as function of humidity, 2827
  of benzene, 125
  and dissipation factor, measurement of, (A)2277
  of fluid mixtures at u.h.f., 1708, (C)3071
  of gases, 128
  of ionic crystals, 381
  of liquids, 396
  of liquids and gases under pressure, 1433
  measurement, at 50 kc/s – 100 Mc/s, 2563, at 100 – 1000 Mc/s, 3092, at 9 kMc/s, with recording refractometer, 2564
  of polar liquids, 124
  of solids and liquids, 397
——**loss**, with changing temperature, (A)137
——**measurements**, equivalence of temperature and frequency in, 3022
——**properties**, of animal tissues at m and cm λ, 1197
  of biological substances at dm λ, 2546
  of human body, at λ=1–10 cm, 3108
  measurement, at 20°–80° C and dm λ, 2559, at u.h.f., 1452
  of Pb and Ba/Pb zirconates, 1434
  of various titanates, at cm λ, 121
Dies, diamond, drilling by h.v. and electrolytic methods, 2805
Diffraction, (See also Sound; Wave propagation; Waves)
  of e.m. waves, by aperture in plane screen, 202, (C)2320
    by circular disk, 2182
    by cylindrical obstacle, 1898
    by plane conducting screen, 85, 2471, 2472, 2473
    by plane screen, 2183
  Fresnel-field formula, 2184
  microwave, by circular aperture, 3141
    by small perfectly conducting surfaces, 2721
  of plane e.m. waves, by circular aperture, 83, (D)84, 1897
    by circular disk or aperture, 2767
  of plane wave, through grating, 2179
  of radar wave, by conducting wedge, 3136
    by semi-infinite screen, 1219
  scattering of e.m. waves by spheres, 870
  of sound pulse at open end of semi-infinite duct, 2683
  of sound waves, by circular disk and aperture, 2114
  theory, critical review of, 345
    integral equations in, 1654
Dimensions, of physical quantities, 2468
Direction finders, Adcock, polarization errors in, 1419
  automatic, rotating aerial system for, 1159
  30–100 Mc/s, fixed H-Adcock, 1418
——**finding**, errors in, (A)1418
  great-circle bearings and distances, computation of, 2510
  relations between speed of indication, bandwidth and signal/noise ratio, 364
  wartime developments in Germany, 363
Directories, of U.S. radio stations and equipment manufacturers, 2897
Discharge, arc, in magnetic field, wind produced by, 2481
  electrical, positive-ion collection by probe in, 1901
  glow, effect of oxide-cathode temperature on, 2768
  spark, positive streamer mechanism of, 57
——**tubes**, glow, polycathode, for digital counting, 266
    relaxation oscillations in, 351
Discriminators, for a.m. f.m. receivers, 446
  crystal, for f.m. oscillator stabilization, (A)1550
  transmission-line, 2331
  voltage, application to d.f., 896

Dispersion, of electro-magneto-ionic waves, graphical study of, **1665**
Displacement measurement, f.m. methods for, **174**
Distortion, f.m., in linear systems with slightly irregular transfer characteristics, (**A**)**1338**
  frequency dependence for iron-cored coils, **829**
  harmonic, in sound receivers, **799**
  intermodulation, measurement of, **1468**
  meters, **937**, **2571**
  modulation, band-pass filters for, **844**
  nonlinear, automatic recording of, **2964**
    in f.m., **1002**
    in valve circuits, **1647**
  phase, in transmission lines, **2125**
  in p.w.m., **1771**
  signal, in television receivers, **1545**
  in sound-recording systems, (**A**)**1319**
  of transients in networks, **1101**
  due to 2-path propagation, **451**
Dynamic systems, linear, transient response of, (**C**)**55**

E

Eddy currents, losses due to, determination of, **3095**
Einstein, symposium on relativity to mark 70th birthday of, **1041**
Electrets, theory of, **2187**
Electrical constants, of materials, measurement of, **393**
Electricity, philosophy of teaching of, **1042**
Electrodes, microspaced, technique for production of, **3068**
Electrolysis, and electrophoresis, of thoria and thorium nitrate, **3059**
Electrolyte tank, for automatic plotting of electron trajectories, **1718**
  for network response measurements, (**A**)**1360**
Electromagnetic field, application of conformal transformation to, **548**
  distribution measurement, **395**
  of linear radiator, **2714**
  of magnetic dipole in stratified atmosphere, **284**
  of point source in multilayer medium, **1216**
——**induction**, in circular disk, **2488**
  in nonuniform thin sheets and shells, **352**
  in rotating sphere, **606**
——**theory**, attraction between parallel currents, **1396**
  general operator field equations, **1895**
  Heaviside's, (**A**)**2194**, unpublished notes on, (**A**)**2178**
  Maxwell's second law, **605**
Electromagnetism, and gravitation, **1675**
Electromagnets, small, high-field, **912**
Electrometers, as bridge-balance indicators, **938**
  new type of, **3097**
  use of multigrid valves as, **150**
Electron beam, in axial magnetic field, **2376**
  axially symmetric, of uniform cross-section, **481**
  in axially symmetric e.s. and e.m. fields, **1395**
  cylindrical, magnetic focusing of, **485**, **785**, **786**
  production and application of, **1128**
  quantum effects in interaction with h.f. fields, **603**, (**C**)**1658**, **3196**
  spiral, interaction with resonant cavity, **1626**
——**diffraction**, **433**
  apparatus for investigating insulator surfaces by, **3107**
——**emission**, secondary, from dielectrics, **3028**
    from metal mixtures, **2526**
  thermionic, from carbon, **604**
    experiments on, use of radioactive Sr as tracer in, (**A**)**1906**
    from Pt, effect of impurities on, (**A**)**1926**
    from refractory materials, (**A**)**1927**
    simplified calculations for, (**A**)**1902**
    from thin oxide films, **1165**
    from thoria-rhenium, **2075**
  from transmitting-valve grids, **2935**
  work function of contaminated metal surfaces, (**A**)**1928**
——**gas**, hydrostatic pressure in, and interaction of electron beam and e.m. wave, (**A**)**1554**
——**guns**, for c.r. tubes, dimensional tolerances for, **2941**
  for electron microscope, **964**
——**lenses**, e.s., electron optics of, (**A**)**1476**
    focal length and chromatic aberration of, **1477**
    transgaussian rays in, **2314**
    3-diaphragm, theory of, **1213**
  e.s. and magnetic, ray tracing for, **966**
    in relativistic mechanics, **1478**
  immersion objective, field in, **1210**
  magnetic, calculation of, **2313**
    cylindrical, with image-distortion correction, **2312**
    focusing in, **200**
    lapping technique for, **1944**
  and mirrors, principal rays for families of, **1743**
——**microscope**, comparison with optical microscope, **2601**
  magnetic, work carried out with, **1474**
  new simplified models, **3119**
  and proton microscope, resolving power of, (**A**)**1476**
  R.C.A. Type EMC, modification to, **2003**
  Type EM2, design and construction of, (**D**)**431**
  3-stage, **1742**
    electron optics of, **965**
——**microscopy**, **433**
  contrast improvement in, **3117**
  practice of, **1741**
  review and bibliography, **432**
——**multiplication**, in crystals, **879**
——**multipliers**, (See also Photocells)
  applications of, **1815**
  microwave, 'multipactor', **494**
——**optics**, at h.f., and at relativistic velocities, **2001**
  of lens-type β-ray spectrograph, **2302**
  mapping of space-charge field in magnetron, **2315**
  potentials derived from axial values in, **2002**
  shadow technique for e.s. and e.m. fields, **199**, **967**, **1211**
——**plasma**, unstable oscillations in, **2764**
——**trajectories**, in alternating magnetic fields, **3021**
  automatic plotter for, **1718**
  dynamic tracer for, **1960**
  under space-charge conditions, **871**
——**transit time**, between coaxial cylinders, **1286**
Electronic applications, (See also Control; Heating; Instruments, electronic) aircraft fuel gauge, **1745**; blood-pressure recording, (**A**)**955**; brazing by pulse methods, **971**; device for calculation of product integrals, **1734**; differential vectorcardiograph, (**A**)**1467**; displacement measurement, **174**; displacement meter, electrical, **1993**; duplicator attachments for machine tools, (**A**)**1467**; flowmeter, (**A**)**1467**; gas-flow speedometer, **1195**; in industry, (**D**)**424**, survey, **709**; leak detector, **3074**; mapping of electrical activity of heart and brain, (**A**)**1467**; measurements on aircraft structures, **1736**; measurement of mechanical quantities, (**A**)**2306**, **2851**; multiplier-photocell detection of short light pulses, **3114**; piezoelectric acceleration meter, **413**; precision measurement of rotation speed, **417**, **951**; pressure measurement, **192**; reciprocator, **66**; resistance-welding control, **958**; r.f. welding control, **959**; rolling-mill control, **1996**; stimulator for biological research, **1206**; strain gauges, Types GM4472 and GM4473, **418**; temperature control, for furnace, **1991**, with thyratron, **2032**; thickness gauge for moving material, **2852**; vibration measurement, 20 c/s–20 kc/s, **706**
Electronics, in war and peace, (**A**)**191**
Electrons, slow, in polar materials, properties of, **1899**
Electrostatic field, effect on sphere or cylinder, **1127**
  measurement of, **927**

    - at very low frequencies, (A)2064
  - valve-grid, induced, 1833, and noise factor, 1567
- **Nuclear physics**, (A)1392

O

- **Optical systems,** Schmidt, aberration of, **347**
    - corrector-plate design for, **346**
    - field-flattened, aberrations of, **1655**
    - wide-angle, design of, **3020**
- **Optics,** interference fringes near caustics, **344**
  - schlieren method, improvement of, **2760**
- **Oscillations,** Barkhausen, in magnetrons, theory of, **67**
  - harmonic and subharmonic, in nonlinear systems, **847**
  - h.f., synthesis from l.f. oscillations, **560**
  - in long dielectric cylinder, **1130, 1131**
  - microwave, generation and amplification with travelling-wave valves, **3004**
  - plasma, and dispersive power, **2482**
    - effects of plasma boundaries in, **3027**
    - in hot-cathode discharge tubes, **495**
    - theory of, **88, 89**
  - relaxation, generalized van der Pol equation for, **2994**
    - in glow discharge tubes, **351**
    - theory of, **2261, 2995**
  - steady-state, theory of, **869**
- **Oscillators,** a.f., beat-frequency, warbler for, **590**
  - blocking, for telemetry, (**A**)1355
    - as variable-frequency sources, **327**
  - cathode-coupled, frequency and amplitude stability of, **1884**
  - class-C, transient behaviour of. (**A**)1355
  - crystal-controlled, **1375**
    - high-stability, **1107,** (**C**)1629
  - f.m., variable-phase-shift, **325**
    - wide-range, **1980**
  - h.f., high-power, for industrial use, **1381**
  - of high frequency-constancy, **848**
  - klystron, for 600–7000 Mc/s, **2164**
  - LC, variable-frequency, stability of, **2450**
  - l.f., bridge-stabilized, frequency stability and parasitic oscillations in, [illegible]
  - locking in integral and non-integral frequency ratios, **2578**
  - microwave, with resonant load, frequency contours for, **317**
    - r.f. phase control in, (**A**)1355
  - negative-grid, electron transit time in, **3002**
    - transit-time effects in, **1820,** (**D**)2384
    - 100–1000 Mc/s, feedback in, **2451**
  - phase-shift, **324,** (**D**)1378, (**C**)1628
    - reactance-valve modulation of, **1022**
    - with very tight coupling, **587**
  - plasma, u.h.f., **1108**
  - van der Pol, energy fluctuations in, **63**
  - quasi-sinusoidal, synchronization of, **1349**
  - RC, calculation of, **2163**
    - design of, **1379**
    - phase-shifting network design for, **840,** (**D**)1098, (**D**)1621
    - use for frequency division, **2166**
  - reactance-valve, **326**
  - reflex-klystron, wide-band, mode suppression in, (**A**)1355
  - relaxation, transitron, **852, 1380**
  - scales for, calibration of, **2825**
  - sine-wave, nonlinear, design of, **323**
  - square-wave keying of, **1285**
  - transitron, **586**
  - triode, using coaxial-line circuits, for dm λ, **850**
    - limiting frequency of, **3003**
    - u.h.f., with series-tuned circuit, **2452**
  - u.h.f., **1109**
    - using disk-seal triode Type 2C40, **1033**
    - with frequency sweep, **2294**
    - multi-valve, using annular resonators, **1885**
  - ultra-low-frequency, 0.1–0.02 c/s, **968**
  - valve, pulling-in range for control by harmonic, **585**
  - variable-frequency, high-stability, **1627**
    - stabilized, high-accuracy, **1464**
    - wide-range, (**A**)1355
  - 3–11-kMc/s, using buzzer, **2581**

P

- **Particle accelerators,** (**A**)1467
  - betatron, circuits for, **429**
    - with and without iron yoke, **1209**
    - theory of, **3084**
    - 6-MeV, experiments with, **2856**
    - 300-MeV, 80-MeV model of, **2593,** performance of, (**A**)2594
  - bevatron, frequency control for r.f. voltage of, (**A**)3116
  - cosmotron, 3-kMeV, **1738**
  - cyclosynchrotron, **1737**
  - cyclotron, **198, 1472**
    - Berkeley, 184-in., focusing of proton beam of, **2800,** operation of, **962**
  - for electrons, radial oscillations in, **2592**
  - ion source for, **2855**
  - linear, design of TM_{010} cylindrical resonators for, (**A**)2590
    - and synchrotrons, **428**
    - 200-kV, with gas-recovery system, (**A**)2589
  - omegatron, **2310**
  - particle injection for, **1471**
  - phase focusing in, **1208**
  - proton synchrotron, **2309**
  - r.f. problems of, (**A**)1467
  - synchro-cyclotron, field regulator for, (**A**)1467
  - synchrotrons, betatron-started, **195, 1739,** capture process in, **2599,** λ/4 coaxial-line resonators for, **430**
    - Berkeley, r.f. system of, **2598**
    - particle capture in, **960**
    - pole-face design for, **1473**
    - racetrack design of, (**A**)2597
    - at Royal Cancer Hospital, London, **196**
    - with straight sections, dynamics of, **197**
    - 14-MeV, electron capture and phase stability in, **961**
    - 30-MeV, extraction of beam from, **2857**
    - 350-MeV, M.I.T., electron-injection gun for, (**A**)2596, operation of, (**A**)2595
- **Perveance,** unit of, **498**
- **Phase** discriminators, diode, **566**
  - measurement, for cm-wave circuits, **682,** 1721
    - with c.r.o., **1965**
  - meter, a.f., **1190,** wide-band, **1724**
    - direct-reading, (**A**)1454, **2289**
    - electronic, **163**
    - h.f., direct-reading, with c.r.o. indicator, **2574,** with pointer indicator, **3101**
    - for range 100 kc/s–20 Mc/s, **1725**
- **Phosphorescence,** in crystals, mechanism of, **2181**
- **Phosphors,** (Ba, Sr)O, luminescence of, **653**
  - $CaSiO_3$, optical properties of, **107**
  - dielectric changes in, **367**
  - emission spectra of, **3056**
  - infrared-sensitive, rise in brightness of, **368, 3057**
  - optical properties of, **104**
  - polycrystalline, scattering and absorption of luminescence light in, **2470**
  - for scintillation counters, (**A**)955
  - SrS-Zn, **2521**
  - sulphide, emission bands of, **1163**
    - luminescence of, **1162**
    - luminescence extinction by electric fields, effect of temperature, **1164**
  - willemite, fluorescence efficiency of, **105**
  - X-ray investigation of, **2227**
  - Zn and Zn-Be silicates, fluorescence in, **106**
  - (Zn, Be)$_2$ SiO_4-Mn, variation of emission spectrum with decay time, **2522**
  - ZnF_2-Mn, cathodoluminescence efficiency and decay of, **108**
    - properties of, **2792**
  - ZnO, effect of ZnS on luminescence of, **2523**
  - ZnS, activation by Na and Li, **109**
    - luminescence-extinction effect of Ni and Co on, **2524**
    - trivalent cations in, **2228**
  - ZnS-Cu, fluorescence of, **1425**
    - formation of fluorescence centres in, **2229**
  - ZnS-Pb, luminescence of, **110**
  - ZnS-Sn, luminescence of, **654**
  - Zn_2SiO_4, rise and decay of luminescence of, **3058**
- **Photocells,** applications of, **194**
  - electron-multiplier, **2929**
    - design of, **2663**
    - high-sensitivity, **2085**
    - pulse rise-time in, **2664**
    - R.C.A. 931A, pulse distribution in, **2056**
    - for scintillation counters, **1198**
  - image-converter, for high-speed shutter, (**A**)1467
  - PbS, photoconductive, in sound reproducers, **1027**
  - phototransistor, **2930**
  - resistance, Ge, **778**
  - Se, constitution and mechanism of, **3199**
  - Type CE-70V, **1288, 2928**
- **Photoconductivity,** of amorphous Se, **2519**
  - of Bi_2S_3 and Bi_2Te_3, **1424**
  - of infrared-sensitive semiconducting films, theory of, **2789**
  - of PbS, **369, 1923**
- **Photoelectric effect,** in Ge, **1924**
- **Photoelectricity,** photoadsorption of thin layer of Ba, **3030**
- **Photography,** aerial, automatic exposure control for, **1999**
  - dark-room exposure meter, **176**
- **Photogravure,** for valve-electrode manufacture, **488**
- **Pickups,** calibration of, variable-speed turntable for use in, **1578, 2701**
  - crystal, for ultrasonic measurements on rods, **1061**
  - design and mounting of arms for, **1577**
  - frequency characteristics, measurement of, **275**
  - gramophone, electromechanical calibrator for, **2412**
- **Piezoelectric crystals,** (See also Quartz)
  - ADP and Rochelle-salt, use at ultrasonic frequencies, **1705**
  - equivalent-circuit constants of, **1975**
  - for filters, **116**
  - I.R.E. standard for, **655**
  - KH_2PO_4 and KD_2PO_4, properties of, **1428**
  - Rochelle salt, domain structure of, **3062**
  - Rochelle type, properties of, **1427**
  - in telecommunications technique, **2525**
  - use of Araldite adhesive in production of, **913**
  - use in receiver circuits, **1502**
- **Piezoelectricity,** of crystals, detection of, **1966**
- **Pitch,** musical, international standard of, **527**
- **Plasma,** gas-discharge, d.c., current fluctuations in, **2670**
  - and the Langmuir layer, **1657**
  - oscillations, theory of, **88, 89**
- **Plastics,** (See also Insulating materials)
  - conductive, Markite, **665**
- **Platinum,** effect of heat treatment on resistance of, (**A**)2540
- **Polishing,** electrolytic, and vacuum technique, **2252**
- **Potential,** of conductor bounded by two intersecting spheres, **880**
- **Power** measurement, with bolometer, for cm waves, **1727**
    - microwave, absolute, **1978,** discrepancies in, **1191**
  - meters, for communication frequencies, **409**
  - supplies, d.c., stabilized, cathode-heater compensation for, **468, 1779** using Mazda-2050 thyratrons, **1532, 2356**
    - for home television receivers, **758**
    - h.v., for e.s. analyser, **469**
    - single-phase parallel inverter, **245**
    - stabilized, 100-A, **467**
    - 5–40-kV, **1257**
- **Prisms,** parallel-plate, verification of theory of, **1344**
- **Projector,** portable, for 16-mm sound film, **545**
- **Protection,** casting-resin technique, **2541**
  - against fungus damage, **664**
- **Proton** microscope, ion optics and mass spectrography, (**A**)1475
- **Public address equipment,** Tesla RU, telecontrol of, **2410**
- **Pulses,** duration sorter and counter, **2734**
  - high-current, production with resonant-cavity accelerator, (**A**)2591
  - nearly periodic, energy spectrum of, **217**

Q

- *Q* measurement, by detuning methods, **143**
    - microwave, taking account of series losses, **400**
- **Quadripoles,** passive, general, synthesis of, (**D**)574
  - with prescribed frequency dependence, **572**
  - resistance, as attenuator elements, **573**
- **Quality control,** sampling, theory of, **2951**
  - and good engineering, (**A**)1559
- **Quantum theory,** asymptotic distribution of eigenvalues, **1183**
- **Quartz,** $\alpha\beta$ transformation point of, **1707**
  - crystals, applications of, **3110**
    - curved, ultrasonic radiation from, **8**
    - elimination of electrical twinning in, **376**
    - for h.f. technology, **114**
    - HT-cut, with zero temperature coefficient, **115**
    - increase of *Q* and reduction of aging for, **375**
    - large, production of, **2795**
    - loading to improve performance of, **2161**
    - oscillations and radiation resistance of, **2115**
    - transmission-line equivalent circuit for, **2162**
  - and fused silica, permittivity of, **3065**
  - plates, very thin, production of, **1178**
  - resonators, as frequency substandards, **1453,** (**D**)2829
  - and use in telecommunications, **1706**

R

- **Radar,** (See also Meteorology; Navigation aids)

measurement of, (A)1998
in radio receivers, 218
Transistors, Ge, characteristics of, 1310, and circuits for, 1312
equivalent circuits for, (A)1026
filamentary, 380
h.f. operation of, 2459
magnetically biased, 2089
p-n junction, 379
possible power applications of, (A)1026
response to square pulses, 1817
theory of, (A)1026
and transistron, comparison of, 3210
Type A, circuit aspects of, 334, l.f. noise in, 2938, physical explanation of characteristics of, 1311
use in counting circuits, 1092
PbS, voltage gain and frequency response of, 2672
Transistron, and transistor, comparison of, 3210
triode Type PTT601, 789
Transmission efficiency, and bandwidth, 454
f.m., bandwidth calculation for, 1023
——**lines,** attenuation of e.m. waves in, 2972
bifilar, theory of, 2126
coaxial, bead design for, (A)277
tapered termination for, 2421
delay, calculation of, 2130
helical, propagation in, 1859
video, 1269
determination of s.w.r. for, 1719
effects of bends in, 2418
exponential, compensation arrangements for, 1583
as transformers, 836
heterogeneous, propagation in, 549
h.f., energy relations for, 29
vector diagram for, 33
open-wire, and aerials, 281, 399
current and charge distributions on, (A)1338
for f.m. aerial feeder, 291
image-line measurements for, 810
overhead, radiation from, 2349
phase distortion in, 2125
r.f., abacs for, 808
shielded-pair, with unbalanced termination, 2417
slotted, v.h.f., correction factors for, 2836
surface-wave, (A)1338
terminal impedance and generalized 2-wire-line theory of, 28
thin-wire, in stratified medium, propagation along, 1858
twin, capacitance of, 2416
and waveguides, resonant, impedance of, 1074

Transmitter-receivers, mobile, single-channel, 2894
Transmitters, (See also Television)
amateur, band-switch, 1283
75-W variable-frequency driver unit for, 475
for λ 160 m, free from television interference, 476
14-Mc/s, television-interference suppression in, 2661
broadcasting, a.m., Australian, design of, 775
150-kW, Voice-of-America, Munich, 1776
150-kW, 540–1600-kc/s, 2658
Beromünster, 100–200-kW, 1524
f.m., u.s.w., 10-kW, 2922
high-efficiency, 2369
710-kc/s, KTBS, at Shreveport, 477
for Citizens' band, 774
crystal-controlled, 2924
communication, h.f. and m.f., aircraft, 1282
f.m., 3-kW, for state police, 2923
m.f., 3-kW, design of, 1284
radiotelegraph, l.f., for arctic use, 2368
s.s.b., S.F.R. 2-kW and 20-kW, 777
spark, for damped cm waves, 1021
television-sound, Eiffel-Tower, 1540
temperature compensation of, 1549
u.h.f., use of power valves in parallel in, 474
unattended, a.f.c. for, 1280
10-kW, 2.5–23-Mc/s, S.F.R., 776
50-kW, 4–26-Mc/s, Types AN/FRT-5 and 6, 1551

'Tron' glossary, 2107
Tropicalization, of electrical equipment, 3066
of materials for valve manufacture, 1432, 2244
Troposphere, (See also Atmosphere)
and ionosphere, cellular atmospheric waves in, 1680
modified refractive index deduced from radio data, 2773

Tuners, television, u.h.f., 1792
wide-band, 2046
for television and f.m., 2884
54–216 Mc/s, 1762
Tuning, of output stage, application of bilinear transformations to, 80

U

Ultrasonic absorption. See Absorption.
applications, adhesion measurement, 175
elastic-constant measurement, 2844
flaw detection, 2845, in gas-turbine disks, 1989
locator for medical applications, 1196
obstacle detection in air, 415
operation of lantern-slide changer, 2846
polymerization of emulsions, 2583
soldering iron for light alloys, 970
in therapy, 2301, apparatus for, 2398
oscillations, generation and effects of, 1322, 1323
generation by electrostriction, 2957
Ultrasonics, energy focusing in, 1561, 2685
in fluids, 6
propagation velocity in liquid mixtures, 1562
pulse instruments, (A)1467
survey, 269
underwater scattering by liquid cylinder, 529
Units, and definitions of e.m. quantities, 1653
Giorgi system, adoption of, 2193
introduction of, 1125, (C)2467
rationalized, 867

V

Vacuum gauges, ionization, reading to 10^{-10} mm Hg, 2785
McLeod, alloy-filled, 366, rotary, 2784
Philips, for pressure range 10^{-1}–10^{-7} mm Hg, 1423, 2518
using Pirani cooling of tungsten filament, 1922
plant, design of, 898
pumps, Hg diffusion, improved, 652
rotary, pumping rate of, 3054
systems, design of, 898
technique, development of, 898
gas emission in l.v. incandescent lamps, 2226
measurement and control of leakage, 898
measurement of pressures <10 mm Hg, 898
measurement of pumping speeds, 898
surface phenomena useful in, 898
Valves, (See also Counter tubes; Transistor; Transistron)
accelerated life-testing of, (A)1454
aligned-grid, computation of electrode systems for, 2095
current-density distribution in, 1821
amplifying, cm-wave, recent developments in, 2666
with negative feedback, as controllable resistors, 2992
beam, gated, Type 6BN6, 1292, 2931, 2932, applications in television, 1785, as limiter-discriminator, 1803
beam-deflection, e.s., M.I.T., for digit storage, (A)1554
for f.m. detection, 224
with ribbon beams, 1801
using space-charge for deflection, (A)1554
cathode-current variation with heating power, 1805
characteristics, display on c.r.o., 2288
pulse equipment for display of, 2576
cold-cathode, glow tubes, circuits for, 489
relay, use with high-resistance grid/cathode circuits, 1354
contaminant in, investigation of, (A)1436, (A)2057
crystal, high-impedance, 'fieldistor', 3198
tetrode, as frequency converters, 2332
definitions of terms, I.R.E. Standard, 1804
dekatron, for counters, 2066
diode, cathode field in, 780
cylindrical, h.f. response of, (A)496, 2937, retarding-field current in, 2092
Ge, glass-sealed, (A)1554, high-temperature characteristics of, (A)1554
as mixers at u.h.f., 1505
noise, cylindrical, transit-time correction factor for, 499, temperature-limited, design of, 500
planar, current growth in, 1816, extension of Llewellyn's transit-time solution, 497, space charge in, 2383
space charge in, 781
total-emission conductance measurements at λ 35 cm and 15 cm, 517, 2086
total-emission damping in, 2087
Type EA40, use in television line timebases, 782
double-beam, amplification in, 511
theory of, 874
double-cathode, spontaneous fluctuations in, (D)791, (D)1035, (C)1831
electrode manufacture by photogravure, 488
electron-coupler, for u.h.f. a.m., 1822
European and American, for television equipment, 1781
for frequencies >1000 Mc/s, 1295
gas-filled, industrial applications of, 963
measurement of voltage drop across, 2291
hum with a.c. heating, 1036
interelectrode capacitance of, (D)1313
klystron, high-power, recent developments in, (A)1554
pulsed, high-power, 10-cm, (A)1554
reflex, beam-loading in, 787, efficiency of, 2948, modulation of, 2370, space-charge effects in, (A)1554
theory of, 1830
2-cavity, 1558—
life expectancy of, statistics of, (A)1559, 2104
magnetron, electron-optical mapping of space-charge field in, 2315
influence of cathode emission properties, (A)2098
interdigital, modes in, 509
inverted, with external cathode, (A)1554
multicavity, resonance frequency of, 3214, space-charge resonance frequencies of, 2946
new types, measurements on, 507
operation near critical anode voltage, 1557
oscillation modes for, 508
planar, phase focusing in, 1827, under static space-charge conditions, 1828
resonance frequencies of space charge in, 2678, measurement of, [illegible]
split-anode, new type, 1829
toroidal, design of, 2097
turbator, 2945, as microwave oscillator, 3005
whole-anode, standing current in, 1826
microwave, electronic fundamentals of, 1824
miniature, French, manufacture of, 1802
mixer, contour analysis of, 1293
multigrid, as electrometers, 150
modern, physical principles of, 483, survey of, 482
mutual-conductance change with frequency, 1301, (D)1812, (D)2379
with mutually bombarding oxide cathodes, 3209
negative-resistance characteristics of, 2137
new, various, 1289
oscillator, u.h.f., wide-range, 2677
with oxide cathodes, vacuum factor of, 1813
ϕ-detector, for f.m., 505
planar, admittances at 4000 Mc/s, 1309
potential-function calculation for, 487
power, with low distortion, 484
pulse-distribution, high-power, (A)1554
reactance, for f.m., 1024
receiving, miniature, 1030
r.f. performance in television circuits, 262
using secondary-electron emission, 1814
sensitivity of, 986
rugged, shock-proof, (A)1554
for use below 30 Mc/s, 1291
residual gas in, tests for, 486
with ribbon-shaped electron beams, 3213
secondary-emission, 2381
use in wide-band amplifiers, 336
shot effect, and limits of amplification, 518
suppression in triodes and pentodes, 516
theory of, 515
transit-time deterioration of space-charge reduction of, 792
slipping-stream, wave propagation in, 2375
subminiature, with 15-mA filaments, 1290
switching, for digital-computer applications, (A)1554
test equipment, universal, visual, 411
test methods, I.R.E. Standard 50IRE7.S2 on, 3103
thyratron, d.c. bias control of anode current in, 503
grid-potential variations and recovery time of, 2676
grid resistance and recovery time of, 2675
hot-cathode, 504
hydrogen-filled, 502
pulse-controlled, 784
trigger-grid, and grid emission, (A)1554
transients in, calculations of, 1806
transit-angle functions and Fourier transforms, (D)1832
transit-time, theory of, 1825
transmitting, a.c.-heated, hum reduction in, 2936
for dm and cm waves, 3202
grid emission in, 2935
high-power, radiator system for, 2933
surge testing of, 169
u.h.f., high-power, parallel operation of, 474, physics and technics of, 1807
for use up to 30 Mc/s, 2058
travelling-wave, 1294, (C)1808, 2060, 3204
beam focusing in, 2376
efficiency of, 3205
helix resonance in, 2944
interaction phenomena in, 2061
low-level operation of, 3206
low-noise, 2059
magnetron-type, 2064
measurements on, 2062
recent developments in, 1298
theory of, 1809; 1810, 2377, 3203; 1811, for large amplitudes, 1296
transverse-current, performance and analysis of, (A)1554
Type T.P.O. 85, 1297
1-kW, 2378
triode, beam, 500-kW, R.C.A. Type 5831, (A)1554, 2093
gas-filled, ignition and discharge processes in, 3212
disk-seal, 30-W, Type T30H, 783
planar, microphony in, 2094, microwave, transadmittance of, 1315, microwave, Type 416A, 3211
receiving, for dm λ, 1314
u.h.f., pencil-type, 501
v.h.f., shot effect in, space-charge smoothing of, 2674
tropicalization of materials for manufacture of, 1432, 2244
u.h.f., technology of, 2096
transit-time effects in, (D)1299
variable-capacitance, Type SR1041A, for frequency control, (A)1554, 2939
v.h.f., survey of developments, 2671
v.m., electron bunching in, 510
radial-beam, microwave, 2947
theory of, 1034, 3215
voltage-regulator, glow-discharge, 1014
for 30–3000 Mc/s, 3201
Varistors, Ge, response to square pulses, 1817
Vibration, of metal plate in sound field, 522
meters, with electrical indication, 185
Voltage, direct, low, measurement of, 1451, 3089
0–0.5 mV, amplifier instrument for measurement of, 1450
multipliers, metal-rectifier, for h.v. supplies, 1256
Voltmeters, for a.c., expanded-scale, (A)687
with large frequency and voltage ranges, 1969
peak, time-constant measurement for, 153
single-pulse, 939
valve, direct-voltage, feedback, 1971
survey of, 1970
for 1 mV, 10 mV. . .1kV and frequencies 1 kc/s–30 Mc/s, 2285
Volume control, automatic, as feedback problem, (C)3014
expansion, using moving coil loudspeaker, 2122

W

Wattmeters, dynamometer, for a.f., 1726
Wave propagation, acoustic, in narrow conduits, 2
field of point radiator in nonuniform layered medium, 1394
Wave propagation, e.m., (See also Field strength; Reception; Television; Waveguides; Waves)
abnormal 50-Mc/s ranges and sporadic-E layer, 1222
absorption in parabolic ionospheric layer for oblique incidence, 1154
angular separation of direct and reflected 3.2-cm waves, 2016
back-scatter observations by the C.R.P.L., 2325
boundary conditions for two absorbent media in contact, 436
C.C.I.R. night-field curves, approximate formula for, 1758
cm-λ, 2616
Fresnel's laws for, 1663
coupling of ordinary and extraordinary rays in ionosphere, 978
in curved ionosphere, (A)1482, 2013
of decametre waves, Doppler effect in, 1227
for WWV and WWVH standard-frequency transmissions, 1232
of decimetre waves, 3140
and deduction of critical frequencies, 1753
diffraction, effects over 47-mile desert path, 203
in the ionosphere, (A)719
over the earth, 438
equation for, solution by conformal transformation, 1480
fade-out observations, (A)1498
fade-out statistics and sunspots for 1948, 3146
fading, analysis of observations at spaced receivers, 1233
of dm waves, due to meteorological conditions, 983
of m.f. and h.f. waves, 443
of single downcoming wave, 442
field strength, as function of range, 1229
variations at v.h.f. and u.h.f., 1496
WDTV survey, 250
German measurements on, 441
through ground, 981
ground interference pattern for 16-kc/s signals, 1491
gyrointeraction, 2328, 2617
h.f., variations in direction of arrival, (A)1497
Huyghens' principle, application to refraction, 1218
for imperfectly transparent medium, 523, 712, 1749
identification of oblique-incidence paths, 2873
in ionized medium, 976
ionosphere, 439
cross-modulation in, 211, (D)2327, for oblique incidence, 1230
effect of D-layer on very-low-frequency waves, (A)723, 1223
geometrical optics of, 3142
higher-order approximations in, 2606
ray paths in, 718, 2875
over land/sea path, (D)732, 2872
of long and very long waves, (A)724
long-scatter echo patterns, (A)721
Lorentz polarization term and vertical-incidence absorption, (A)698
low-level atmospheric ducts, 2329
measurement of small angles of elevation for metre waves, 3130
for medium waves over inhomogeneous terrain, 2011
microwave, (A)1482
drift of fluctuations on overwater path, 2876
effect of water vapour for temperatures below 0°C, 2612
estimation of attenuation from meteorological statistics, 2879
signal strength, phase, and index of refraction in, 1483
M-mode, 1230
Mögel-Dellinger effect, origin of, 3145
at λ 1250 m, 716
m.u.f. forecasting, (A)1485, 1754
oblique incidence, and magneto-ionic theory, 714
and WKB approximation, 205
work of C.R.P.L., (A)720
through parallel-plate media, 1344
through plasma layers of finite thickness, 3134

polarization of 150-kc/s waves reflected from ionosphere, **3137**
prediction of 2-m-band transmission conditions, **212**
problems in, simulation of, **2014**
pulse transmission over long distances, **(A)722**
reflection, at discontinuity of permittivity gradient, **1750**, **3135**
    effect of ionospheric disturbance on long waves, **2326**

Abstract No. 102 Cancel 526.92 in the U.D.C. number.
,, ,, 188 In title, for 'inductance' read 'induction'.
,, ,, 876 For 'Vol. 29' read 'Vol. 30'.
,, ,, 919 For 'Vol. 29' read 'Vol. 30'.
,, ,, 998 For 'Vol. 29' read 'Vol. 30'.
,, ,, 1018 For 'Vol. 29' read 'Vol. 30'.
,, ,, 1107 For 'Vol. 29' read 'Vol. 30'.
,, ,, 1120 For 'Vol. 29' read 'Vol. 30'.
,, ,, 1125 In the U.D.C. number, for 530 081 read 53.081.
,, ,, 1258 For 'J. R. Duthil' read 'J. R. Dutilh'.
,, ,, 1294 For 'Vol. 29' read 'Vol. 30'.
,, ,, 1325 Insert as authors P. Chavasse and R. Lehmann.
,, ,, 1561 For 'J. L. van Meter' read 'J. L. Van Meter'.
,, ,, 1616 For 'M. Leroy' read 'R. Leroy'.
,, ,, 1922 For 'L. Spiers & W. P. Jolly' read 'W. P. Jolly'.
,, ,, 2432 For 'F. K. Howard' read F. K. Goward'.

LIST OF JOURNALS

A selection of the journals which are regularly scanned is given below, together with the addresses of publishers or editorial offices and the abbreviations of titles as used in the Abstracts and References. Applications for copies of any journal should be made to the addresses given.

The full title of each journal is given first and is followed by the address, the abbreviated title being shown within parentheses. In a few cases the nature of a journal is indicated, where neither the title nor the address shows it clearly.

A

Acta Polytechnica, Royal Swedish Academy of Engineering Sciences, Stockholm, Sweden. (*Acta polyt., Stockholm*)
Alta Frequenza, Associazione Elettrotecnica Italiana, Milano (202), Via S. Paolo 10, Italy. (*Alta Frequenza*)
Analytical Chemistry, American Chemical Society, 1155 Sixteenth Street NW, Washington 6, D.C., U.S.A. (*Anal. Chem.*)
Annalen der Physik, J. A. Barth, Leipzig C1, Salomonstrasse 18B, Germany. (*Ann. Phys., Lpz.*)
Annales de Physique, Masson & Cie, 120 Boulevard Saint-Germain, Paris 6^e, France. (*Ann. Phys., Paris*)
Annales de Radioélectricité, 23 Rue du Maroc, Paris 19^e, France. (*Ann. Radioélect.*)
Annales des Télécommunications, 165 Rue de Sèvres, 3 & 5 Boulevard Pasteur, Paris 15^e, France. (*Ann. Télécommun.*)
Annali di Geofisica, Istituto Nazionale di Geofisica, Città universitaria, Rome, Italy. (*Ann. Geofis.*)
Applied Scientific Research, Martinus Nijhoff, Lange Voorhout 9, 's-Gravenhage, Holland. (*Appl. sci. Res.*)
Archiv der elektrischen Übertragung, Wiesbaden-Biebrich, Mühlweg 2, Germany. (*Arch. elekt. Übertragung*)
Archiv für Elektrotechnik, Springer Verlag, Berlin-Charlottenburg 2, Jebensstrasse 1, *or* Heidelberg, Neuenheimer Landstrasse 24, Germany. (*Arch. Elektrotech.*)
Archiv für technisches Messen, R. Oldenbourg Verlag, München, Lotzbeckstrasse 2b, Germany. (*Arch. tech. Messen*)
Arkiv för Fysik, published for Royal Swedish Academy of Sciences by Almqvist & Wiksells Boktryckeri A.B., Stockholm, Sweden. (*Ark. Fys.*)
A.S.T.M. Bulletin, 20th and Northampton Streets, Easton, Pa, U.S.A. (*A.S.T.M. Bull.*)
Audio Engineering, Radio Magazines Inc., 10 McGovern Avenue, Lancaster, Pa, U.S.A. (*Audio Engng*)
Australian Journal of Applied Science, Commonwealth Scientific and Industrial Research Organization, 314 Albert Street, East Melbourne C2, Australia. (*Aust. J. appl. Sci.*)
Australian Journal of Instrument Technology, 414 Collins Street, Melbourne, Australia. (*Aust. J. Instrum. Tech.*)
Australian Journal of Scientific Research (Series A), 314 Albert Street, East Melbourne C2, Australia. (*Aust. J. sci. Res., Ser. A*)
A.W.A. Technical Review, Amalgamated Wireless (Australasia) Ltd, Sydney, Australia. (*A. W. A. tech. Rev.*)

B

B.B.C. Quarterly, British Broadcasting Corporation, 35 Marylebone High Street, London, W.1, England. (*B.B.C. Quart.*)
Beama Journal, British Electrical and Allied Manufacturers' Association, 36 Kingsway, London, W.C.2, England. (*Beama J.*)
Bell Laboratories Record, 463 West Street, New York 14, N.Y., U.S.A. (*Bell Lab. Rec.*)
Bell System Technical Journal, American Telephone and Telegraph Company, 195 Broadway, New York 7, N.Y., U.S.A. (*Bell Syst. tech. J.*)
British Journal of Applied Physics, 47 Belgrave Square, London, S.W.1, England. (*Brit. J. appl. Phys.*)
Brown Boveri Review, Artillery Mansions, 75 Victoria Street, London, S.W.1, England. (*Brown Boveri Rev.*)
Bulletin de l'Académie des Sciences de l'U.R.S.S., (*a*) série physique, (*b*) série géographique et géophysique, (*c*) classe sciences techniques, (In Russian), Academy of Sciences, Moscow, U.S.S.R. (*Bull. Acad. Sci. U.R.S.S.,* (*a*) *sér. phys.,* (*b*) *sér. géogr. géophys.,* (*c*) *tech. Sci.*)
Bulletin of the American Meteorological Society, Executive Secretary, K. C. Spengler, 5 Joy Street, Boston 8, Mass., U.S.A. (*Bull. Amer. met. Soc.*)
Bulletin de l'Association suisse des Électriciens, 301 Seefeldstrasse, Zürich 8, Switzerland. (*Bull. schweiz. elektrotech. Ver.*)
Bulletin de la Société française des Électriciens, 8–14 Avenue Pierre Larousse, Malakoff (Seine), France. (*Bull. Soc. franç. Élect.*)
Bulletin technique de la Suisse romande, F. Rouge & Cie, Lausanne, Switzerland. (*Bull. tech. Suisse romande*)

C

Câbles et Transmission, Sotelec, 16 Rue de la Baume, Paris 8^e, France. (*Câbles & Transmission, Paris*)
Canadian Journal of Research (Sections A, B and F), National Research Council, Ottawa, Canada. (*Canad. J. Res.*)
Chalmers tekniska Högskolas Handlingar, N. J. Gumperts Bokhandel, Göteborg, Sweden. (*Chalmers tekn. Hogsk. Handl.*)
Communication News, Philips' Telecommunication Industries, Hilversum, Holland. (*Commun. News*)
Comptes Rendus Hebdomadaires des Séances de l'Académie des Sciences, Gauthier-Villars, Quai des Grands Augustins 55, Paris, France. (*C. R. Acad. Sci., Paris*)
Comptes Rendus (Doklady) de l'Académie des Sciences de l'U.R.S.S., (In Russian), Academy of Sciences, Moscow, U.S.S.R. (*C. R. Acad. Sci. U.R.S.S.*)

D

Distribution of Electricity, 51–53 Hatton Garden, London, E.C.1, England. (*Distrib. Elect.*)

E

Electrical Communication, International Telephone and Telegraph Corporation, 67 Broad Street, New York 4, N.Y., U.S.A. (*Elect. Commun.*)
Electrical Engineering, Journal of the American Institute of Electrical Engineers, 500 Fifth Avenue, New York 18, N.Y., U.S.A. (*Elect. Engng, N.Y.*)
Electrical Manufacturing, 1250 Sixth Avenue, New York 20, N.Y., U.S.A. (*Elect. Mfg, N.Y.*)
Electrical Times, Sardinia House, Sardinia Street, London, W.C.2, England. (*Elect. Times*)
Electrician, Bouverie House, 154 Fleet Street, London, E.C.4, England. (*Electrician*)
Electronic Engineering, 28 Essex Street, London, W.C.2, England. (*Electronic Engng*)
Electronics, 99–129 North Broadway, Albany 1, N.Y., U.S.A. (*Electronics*)
Elektrotechnik, Berlin N.W.7, Dorotheenstrasse 41, Germany. (*Elektrotechnik, Berlin*)
Elektrotechnik und Maschinenbau, Journal of the Elektrotechnischer Verein Österreichs, Springer Verlag, Wien I, Mölkerbastei 5, Austria. (*Elektrotech. u. Maschinenb.*)
Elektrotechnische Zeitschrift, G. Westermann Verlag, Braunschweig, Riddagshäuser Weg 66, Germany. (*Elektrotech. Z.*)
Endeavour, Imperial Chemical Industries, Nobel House, Buckingham Gate, London, S.W.1, England. (*Endeavour*)
Engineer, 28 Essex Street, London, W.C.2, England. (*Engineer, Lond.*)
Engineering, 35 & 36 Bedford Street, London, W.C.2, England. (*Engineering, Lond.*)
Ericsson Review, Stockholm 32, Sweden. (*Ericsson Rev.*)

F

Fernmeldetechnische Zeitschrift, F. Vieweg & Sohn, Braunschweig, Burgplatz 1, Germany. (*Fernmeldetech. Z.*)
FM-TV, 264 Main Street, Great Barrington, Mass., U.S.A. (*FM-TV*)
Frequenz, Schiele & Schön, Berlin, S.W.29, Boppstrasse 10, Germany. (*Frequenz*)
Funk und Ton, Verlag für Radio-Foto-Kinotechnik G.m.b.H., Berlin-Borsigwalde, Eichborndamm 141–167, Germany. (*Funk u. Ton*)

G

G.E.C. Journal, General Electric Company, Magnet House, Kingsway, London, W.C.2, England. (*G.E.C. J.*)
General Electric Review, General Electric Company, 1 River Road, Schenectady 5, N.Y., U.S.A. (*Gen. elect. Rev.*)
General Radio Experimenter, General Radio Company, 275 Massachusetts Avenue, Cambridge 39, Mass., U.S.A. (*Gen. Radio Exp.*)

H

Helvetica Physica Acta, Journal of the Société suisse de Physique, Éditions Birkhäuser, Bâle, Switzerland. (*Helv. phys. Acta*)
HF, 55 Rue Defacqz, Brussels, Belgium. (*HF, Brussels*)

I

Indian Journal of Physics, (and Proceedings of the Indian Association for the Cultivation of Science), 210 Bowbazar Street, Calcutta, India (*Indian J. Phys.*)
Industrial and Engineering Chemistry, American Chemical Society, 1155 Sixteenth Street NW, Washington 6, D.C., U.S.A. (*Industr. Engng Chem.*)

J

Journal of the Acoustical Society of America, American Institute of Physics, 57 East 55th Street, New York 22, N.Y., U.S.A. (*J. acoust. Soc. Amer.*)

Journal of Applied Physics, American Institute of Physics, 57 East 55th Street, New York 22, N.Y., U.S.A. (*J. appl. Phys.*)

Journal of the British Institution of Radio Engineers, 9 Bedford Square, London, W.C.1, England. (*J. Brit. Instn Radio Engrs*)

Journal of the Franklin Institute, Prince and Lemon Streets, Lancaster, Pa, U.S.A. (*J. Franklin Inst.*)

Journal of Geophysical Research, Johns Hopkins Press, Baltimore 18, Maryland, U.S.A. (*J. geophys. Res.*)

Journal of the Institution of Engineers, Australia, Science House, Gloucester & Essex Streets, Sydney, Australia. (*J. Instn Engrs Aust.*)

Journal of Mathematics and Physics, Massachusetts Institute of Technology, Cambridge 39, Mass., U.S.A. (*J. Math. Phys.*)

Journal of Metals, American Institute of Mining and Metallurgical Engineers Inc., 29 West 39th Street, New York 18, N.Y., U.S.A. (*J. Metals*)

Journal of the Optical Society of America, American Institute of Physics, 57 East 55th Street, New York 22, N.Y., U.S.A. (*J. opt. Soc. Amer.*)

Journal de Physique et le Radium, 12 Place Henri-Bergson, Paris, 8e France. (*J. Phys. Radium*)

Journal des Recherches du Centre national de la Recherche scientifique, 13 Quai Anatole France, Paris 7e, France. (*J. Rech. Centre nat. Rech. sci.*)

Journal of Research of the National Bureau of Standards, U.S. Government Printing Office, Washington, D.C., U.S.A. (*Bur. Stand. J. Res.*)

Journal of Scientific Instruments, 47 Belgrave Square, London, S.W.1. England. (*J. sci. Instrum.*)

Journal of the Society of Glass Technology, Secretary, J. H. Partridge. Elmfield, Northumberland Road, Sheffield 10, England. (*J. Soc. Glass Tech.*)

Journal of the Society of Motion Picture and Television Engineers, 342 Madison Avenue, New York 17, N.Y., U.S.A. (*J. Soc. Mot. Pict. Televis. Engrs*)

Journal of the Television Society, G. Parr (Ed.), 68 Compton Road, London, N.21, England. (*J. Televis. Soc.*)

L

Light Metals, Bowling Green Lane, London, E.C.1, England. (*Light Metals*)

M

Machinery, Clifton House, 83–117 Euston Road, London, N.W.1, England. (*Machinery, Lond.*)

Marconi Review, Marconi House, Chelmsford, England. (*Marconi Rev.*)

Materials and Methods, Reinhold Publishing Corporation, 330 West 42nd Street, New York 18, N.Y., U.S.A. (*Materials & Methods*)

Metal Industry, Louis Cassier Company Ltd, Dorset House, Stamford Street, London, S.E.1, England. (*Metal Ind., Lond.*)

Metal Progress, American Society for Metals, 7301 Euclid Avenue, Cleveland 3, Ohio, U.S.A. (*Metal Progress*)

Metal Treatment, 49 Wellington Street, London, W.C.2, England. (*Metal Treatm.*)

Metallurgia, Kennedy Press Ltd, 21 Bedford Street, London, W.C.2. England. (*Metallurgia, Manchr*)

Meteorological Magazine, His Majesty's Stationery Office, York House, Kingsway, London, W.C.2, England. (*Met. Mag.*)

Microtecnic, Lausanne, Switzerland. (*Microtecnic, Lausanne*)

Modern Plastics, 122 East 42nd Street, New York 17, N.Y., U.S.A. (*Mod. Plast.*)

Monthly Notices of the Royal Astronomical Society, Burlington House, London, W.1, England. (*Mon. Not. R. astr. Soc.*)

N

Nature, Macmillan & Co. Ltd, St. Martin's Street, London, W.C.2, England. (*Nature, Lond.*)

Naturwissenschaften, Springer Verlag, Berlin-Charlottenburg 2, Jebensstrasse 1, Germany. (*Naturwissenschaften*)

Nucleonics, 212 East York Street, York, Pa, U.S.A. (*Nucleonics*)

O

Observatory, Royal Observatory, Greenwich, London, S.E.10, England. (*Observatory*)

Onde électrique, 40 Rue de Seine, Paris 6e, France. (*Onde élect.*)

Optik, Wissenschaftliche Verlagsgesellschaft, Stuttgart 1, Postfach 40. Germany. (*Optik*)

Österreichische Zeitschrift für Telegraphen- Telephon- Funk- und Fernsehtechnik, Springer Verlag, Wien 1, Mölkerbastei 5, Austria. (*Öst. Z. Telegr. Teleph. Funk Fernsehtech.*)

P

Philips Research Reports, N.V. Philips Gloeilampenfabrieken, Eindhoven, Holland. (*Philips Res. Rep.*)

Philips Technical Review (as for **Philips Research Reports**). (*Philips tech. Rev.*)

Philosophical Magazine, Taylor & Francis Ltd, Red Lion Court, Fleet Street, London, E.C.4, England. (*Phil. Mag.*)

Philosophical Transactions of the Royal Society, Cambridge University Press, Bentley House, London, N.W.1, England. (*Philos. Trans.*)

Physica, Journal of the Dutch Physical Society. Martinus Nijhoff, Lange Voorhout 9, 's-Gravenhage, Holland. (*Physica,'s Grav.*)

Physical Review, 57 East 55th Street, New York 22, N.Y., U.S.A. (*Phys. Rev.*)

Post Office Electrical Engineers' Journal, Engineer-in-Chief's Office, Alder House, Aldersgate Street, London, E.C.1, England. (*P.O. elect. Engrs' J.*)

Poste e Telecomunicazioni, Ministero P.T., Viale Aventino 19, Roma, Italy. (*Poste e Telecomunicazioni*)

Proceedings of the Cambridge Philosophical Society, Cambridge University Press, Bentley House, London, N.W.1, England. (*Proc. Camb. phil. Soc.*)

Proceedings of the Institute of Radio Engineers, 1 East 79th Street, New York 21, N.Y., U.S.A. (*Proc. Inst. Radio Engrs*)

Proceedings of the Institution of Electrical Engineers, Parts I, II & III, Savoy Place, London, W.C.2, England. (*Proc. Instn elect. Engrs*)

Proceedings of the Institution of Radio Engineers, Australia, Science House, Gloucester Street, Sydney, N.S.W., Australia. (*Proc. Instn Radio Engrs, Aust.*)

Proceedings of the National Electronics Conference, 852 East 83rd Street. Chicago 19, Illinois, U.S.A. (*Proc. nat. Electronics Conference, Chicago*)

Proceedings of the Physical Society, 1 Lowther Gardens, Prince Consort Road, London, S.W.7, England. (*Proc. phys. Soc.*)

Proceedings of the Radio Club of America, 11 West 42nd Street, New York, N.Y., U.S.A. (*Proc. Radio Cl. Amer.*)

Proceedings of the Royal Society, Cambridge University Press, Bentley House, London, N.W.1, England. (*Proc. roy. Soc.*)

Q

QST, American Radio Relay League Inc., 38 La Salle Road, West Hartford 7, Conn., U.S.A. (*QST*)

Quarterly of Applied Mathematics, Brown University, Providence 12, R.I., U.S.A. (*Quart. appl. Math.*)

Quarterly Journal of the Royal Meteorological Society, 49 Cromwell Road, London, S.W.7, England. (*Quart. J. R. met. Soc.*)

R

Radio française, 92 Rue Bonaparte, Paris 6e, France. (*Radio franç.*)

Radio professionnelle belge, Avenue Molière 1, Brussels, Belgium. (*Radio prof. belge*)

Radio professionnelle, 81 Rue de la Pompe, Paris 16e, France. (*Radio prof., Paris*)

Radio Technical Digest (Edition française), 122 Boulevard Murat, Paris 16e, France. (*Radio tech. Dig., Édn franç.*)

Radio Technik, Wien VI, Mariahilferstrasse 71, Austria. (*Radio Tech., Vienna*)

Radio & Television News, Ziff Davis Publishing Company, 185 N. Wabash Avenue, Chicago 1, Illinois, U.S.A. (*Radio & Televis. News*)

RCA Review, RCA Laboratories Division, Princeton, N.J., U.S.A. (*RCA Rev.*)

Reports on Progress in Physics, The Physical Society, 1 Lowther Gardens, Prince Consort Road, London, S.W.7, England. (*Rep. Progr. Phys.*)

Research, Butterworth's Scientific Publications Ltd, 4–6 Bell Yard, Temple Bar, London, W.C.2, England. (*Research, Lond.*)

Review of Scientific Instruments, 57 East 55th Street, New York 22, N.Y., U.S.A. (*Rev. sci. Instrum.*)

Reviews of Modern Physics, 57 East 55th Street, New York 22, N.Y., U.S.A. (*Rev. mod. Phys.*)

Revista de Telecomunicación, Palacio de Comunicaciones, Madrid, Spain. (*Rev. Telecomunicación, Madrid*)

Revue générale de l'Electricité, 12 Place Henri Bergson, Paris 8e, France. (*Rev. gén. Élect.*)

Revue d'Optique, 3 & 5 Boulevard Pasteur, Paris 15e, France. (*Rev. d'Optique*)

Revue scientifique, 4 Rue Pomereu, Paris 16e, France. (*Rev. sci., Paris*)

Revue technique Compagnie française Thomson-Houston, 173 Boulevard Haussmann, Paris, France. (*Rev. tech. Comp. franç. Thomson-Houston*)

Ricerca scientifica, Roma, Piazzale delle Scienze 7, Italy. (*Ricerca sci.*)

R.S.G.B. Bulletin, New Ruskin House, Little Russell Street, London, W.C.1, England. (*R.S.G.B. Bull.*)

S

Schweizer Archiv für angewandte Wissenschaft und Technik, Buchdruckerei Vogt-Schild, Solothurn, Switzerland. (*Schweiz. Arch. angew. Wiss. Tech.*)

Scientific Monthly, 10 McGovern Avenue, Lancaster, Pa, U.S.A. (*Sci. Mon.*)

Sylvania Technologist, Lawrence Street, Flushing, N.Y., U.S.A. (*Sylvania Technologist*)

T

Technical Bulletin of the National Bureau of Standards, U.S. Government Printing Office, Washington 25, D.C., U.S.A. (*Tech. Bull. nat. Bur. Stand.*)

Technique moderne, 92 Rue Bonaparte, Paris 6e, France. (*Tech. mod., Paris*)

Technische Mitteilungen, Journal of the Swiss Post Office, Direction générale PTT, Berne, Speichergasse 6, Switzerland. (*Tech. Mitt. schweiz. Telegr.-TelephVerw.*)

Tele-Tech, 480 Lexington Avenue, New York 17, N.Y., U.S.A. (*Tele-Tech*)

Télévision, 9 Rue Jacob, Paris 6e, France. (*Télévision*)

Television Engineering, Bryan Davis Publishing Co. Inc., 52 Vanderbilt Avenue, New York 17, N.Y., U.S.A. (*TV Engng, N.Y.*)

Tesla Technical Reports, KOVO Ltd, Mezibranská, Praha II, Czechoslovakia. (*Tesla tech. Rep., Prague*)

Tijdschrift van het Nederlands Radiogenootschap, Oude Utrechtseweg 8, Baarn, Holland. (*Tijdschr. ned. Radiogenoot.*)

Toute la Radio, 9 Rue Jacob, Paris 6e, France. (*Toute la Radio*)

Transactions of the American Geophysical Union, National Academy of Sciences, Washington, D.C., U.S.A. (*Trans. Amer. geophys. Union*)

Transactions of the American Institute of Electrical Engineers, 33 West 39th Street, New York 18, N.Y., U.S.A. (*Trans. Amer. Inst. elect. Engrs*)

Transactions of the South African Institute of Electrical Engineers, corner Marshall and Holland Streets, Johannesburg, S. Africa. (*Trans. S. Afr. Inst. elect. Engrs*)

T.S.F. pour Tous, 40 Rue de Seine, Paris 6e, France. (*T.S.F. pour Tous*

V

Le Vide, Journal of the Société française des Ingénieurs Techniciens du Vide, 44 Rue de Rennes, Paris 6e, France. (*Le Vide*)

W

Weather, 49 Cromwell Road, London, S.W.7, England. (*Weather, Lond.*

Wireless Engineer, Dorset House, Stamford Street, London, S.E.1 England. (*Wireless Engr*)

Wireless World, (as for **Wireless Engineer**). (*Wireless World*)

Z

Zeitschrift für angewandte Physik, Springer Verlag, Berlin-Charlottenburg 2, Jebensstrasse 1, Germany. (*Z. angew. Phys.*)

Zeitschrift für Meteorologie, Deutscher Zentralverlag, Berlin O 17, Michaelkirchstrasse 17, Germany. (*Z. Met.*)

Zeitschrift für Naturforschung, Tübingen, Johannesweg 11, Germany. (*Z. Naturf.*)

Zeitschrift für Physik, Springer Verlag, Berlin-Charlottenburg 2, Jebensstrasse 1, Germany. (*Z. Phys.*)

Zhurnal eksperimentalnoi y teoreticheskoi Fiziki, (In Russian), Academy of Sciences, Moscow, U.S.S.R. (*Zh. eksp. teor. Fiz.*)

Zhurnal tekhnicheskoi Fiziki, (In Russian), Academy of Sciences, Moscow, U.S.S.R. (*Zh. tekh. Fiz.*)

Section VI—1951

Index to

Abstracts and References

This section contains an index, listed separately by author and by subject, for all Abstracts and References published in PROCEEDINGS OF THE IRE from February, 1951, through January, 1952.

AUTHOR INDEX

AUTHOR INDEX—A name followed by "and" is that of the first author of a jointly written paper, while the word "with" indicates that the name indexed is that of the second author.

A

Abadie, P., I. Épelboin and B. Pistoulet, properties of magnetic powders at u.h.f., **378**
Abbott, F. R., and C. R. Fisher, directivity produced by parasite parallel to vertical aerial, **41**
Abel, W., long-distance back-scatter and determination of skip distance and m.u.f., **(A)2799**
Abelès, F., e.m. wave propagation in stratified media, **857, 1340, 2157**
Abraham, W. G., F. L. Salisbury and S. F. Varian, klystron amplifier for u.h.f. television, **(A)2304**
—— and others, K-band amplifier klystron, **(A)2304**
—— with others, crystal control of 4-kW 1036-Mc/s transmitter, **(A)2298**
Abramowitz, M., tables of integrals of Struve functions, **139**
Ackroyd, J. O., with J. H. Combridge, upper limit of frequency for human hearing, **(D)2322**
Adams, P. H., developments in dry batteries, **3121**
Adams, R. J., and K. S. Kelleher, pattern calculations for paraboloid aerials of elliptic aperture, **39**
Addink, C. C. J., calibration of tuning forks, **2234**
Aden, A. L., e.m. scattering from spheres, **2417**
—— J. T. deBettencourt and A. T. Waterman, Jr, ionospheric radio-wave polarization, **1464**
Adler, R., amplifier with negative-resistance load, **(D)599**; miniature travelling-wave valve for lower u.h.f. band, **(A)2304**
Adorian, P., television distribution over short wire lines, **239**
Affleck, J. H., with E. B. Hensley, BaO-on-W cathode interface compound, **263, 2054**
Agar, A. W., with R. S. M. Revell, focusing in electron microscopy, **1218**
Ahmed, Rais, nonlinear method of circuit analysis, **585**
Aigrain, P., h.v. reverse current of Ge diodes, **1529**
—— C. Dugas and J. Germain, adsorption on semiconductors, **1667**
Aikens, A. J., and L. Y. Lacy, 450-Mc/s mobile R/T transmission tests in New York, **734, 1766**
Aisberg, E., stereophonic broadcasting experiments, **1061**
Aitchison, R. E., preparation of photoconducting CdS, **2724**
Akhiezer, A. I., and G. Ya. Lyubarski, excitation of oscillations in waveguide by linear aerial, **2335**
Akulov, N. S., Z. I. Alizade and K. P. Belov, magnetostriction of Fe/Pt alloys, **370**
Albersheim, W. J., measurement techniques for radio relays, **(A)1958**
—— and J. P. Schafer, echo distortion in f.m. transmission of frequency-division-multiplex signals, **(A)2265**
Albert, A. L., Electrical Communication, **(B)454**
Alden, J. M., with others, static magnetic memory unit for low-cost computers, **1422**
Aldrich, D. F., with others, speed of electronic switching circuits, **(C)294**
Alexander, F. W., standard musical pitch, **1820**
Alexander, J. W., amplification of pulse-form modulated voltages, **76**
Alfvén, H., theory of magnetic storms and auroras, **(D)2993**
Alger, P. L., with J. J. Smith, finite representation of impulse functions, **(A)2218**; Heaviside's operational calculus and Schwartz functions, **932**
Alixant, M., colour television, **2026**
—— with N. Mikhnewitch, Williamson very-high-fidelity amplifier, **1834**
Alizade, Z. I., magnetostriction of Fe/Pd and Ni/Pd alloys, **1935**
—— with others, magnetostriction of Fe/Pt alloys, **370**
Alkemade, C. T. J., and P. M. Endt, coupling of a.c. galvanometer to amplifier, **2480**
Allard, L. S., 'ideal' post-deflection-acceleration c.r. tube, **1032**
—— and R. T. Hill, switch and storage tubes, **3180**
Allcock, G. McK., variability of sky-wave signals under conditions of absorption, **728**
Allcock, H. J., and J. R. Jones, The Nomogram, **(B)1423**
Alldredge, L. R., with L. H. Rumbaugh, airborne equipment for geomagnetic measurements, **1442**
Allen, C. C., with H. R. Meahl, calibration of ammeters above 100 Mc/s, **(A)**[illegible]
Allen, C. H., finite amplitude distortion in spherically diverging sound wave, **(A)520**
—— with J. P. Walker, sonic wind and static pressure in intense sound fields, **(A)518**
Allen, C. W., solar constant, **102**
—— and C. S. Gum, survey of galactic radio-noise at 200 Mc/s, **867**
—— with R. v. d. R. Woolley, ultraviolet emission from chromosphere, **1632**
—— with others, radio observations of two large solar disturbances, **2168**
Allen, E. W., with K. A. Norton, variation with frequency of range of f.m. and television transmitters, **2281**
Allen, J. E., voltage gradients in high-current sparks, **852**
Allen, K. W., with J. T. Dewan, recorder for μs-pulse amplitudes, **402**
Allis, W. P., with others, effect of magnetic field on breakdown of gases at u.h.f., **1134**
Allred, C. M., dissipative- and piston-attenuator corrections, **(A)1958**
Alpert, N., J. Luongo and W. Wiener, 32-channel high-speed commutator, **295**
Alsberg, D. A., sweep-frequency method of vector-impedance measurement, **(A)1958**
Amdursky, M. E., with others, low-reflection picture tubes, **1501**
Ament, W. S., wave propagation over rough surfaces, **(A)2799**
Amey, W. G., with others, stabilized wide-band d.c. amplifier, **849**
Amoignon, J., with others, effect of radioactivity on thermoelectronic emission, **2301**
Amos, B., and W. Heiser, internal television receiver interference, **(A)2292**
Ancell, J. E., with others, comparison of absorption coefficients, **(A)1811**
Anders, H., spark transmitter for lightly damped cm waves, **2775**
Anderson, L. J., with others, American Standard Z24.9-1949 for coupler calibration of earphones, **21**
Anderson, R. V., autocalling system, **2015**
Anderson, T. N., waveguide switches for commercial and military applications, **(A)2100**
Andreev, V. D., L. E. Levina and B. G. Mendelev, electric field in 3-electrode gas-discharge tube, **2874**
Andres, P. G., Survey of Modern Electronics, **(B)2514**
Andrews, C. L., diffraction pattern of microwaves near rods, **2159**
Andrews, D. R., broadcast tape speed control, **2900**
—— with others, methods of calibrating frequency records, **583**
Andrieux, P., standardized magnetic circuits of French PTT, **2934**
—— and — Fraize, production control of permeability, **2233**
Angel, Y., Réception Radiophonique, Parasites, **(B)2825**
Ansbacher, F., and W. Ehrenberg, electron-bombardment conductivity of dielectric films, **2196**
Appleton, E., ionospheric equator in F_2 layer, **882**
Ardillon, J. M., with others, earth's magnetism and radio wave propagation, **2806**
Arditi, M., A. G. Clavier and P. Parzen, travelling-wave-valve amplifier, **(A)**[illegible]
Arends, J. L., a.f.c. for s.s.b. receivers, **2003**

Wren, T. C., with others, power-line carrier system for multistation control, telemetry and communication, **425**
Wright, D. A., Semi-Conductors, **(B)2420**
Wright, R. W., electrical properties of CdO, **2200**
—— with others, dispersion mechanisms in ferrites, **337**
Wu, H. S., with others, beam analyser, **(A)2226**
Wulf, O. R., and M. W. Hodge, relation between geomagnetic field and circulation of atmosphere, **1369**
Wulff, V. J., with W. J. Fry, ultrasonic irradiation of nerve tissue, **(A)528**
—— with others, ultrasonic effects on animal tissues, **1060**
Wulfsberg, K. N., with others, five-digit parallel coder tube, **(A)2220**
Wüster, H. O., with K. Försterling, origin of harmonics in ionosphere, **721**; reflection in inhomogeneous medium, **2187**
van der Wyck, C. T. F., cylindrically diverging e.m. waves in nonuniform medium, **32**
Wylie, F. J., port approach and berthing in fog, **2719**
Wyman, J. H., sequence timer for moulding press, **955**

Y

Yabsley, D. E., atmospheric noise levels near Darwin, **1764**
—— with F. J. Lehany, solar radiation at 1200, 600 and 200 Mc/s, **(C)861**
—— with others, radio observations of two large solar disturbances, **2168**; solar radiation at 50 cm during eclipse, **346**
Yachter, M., with others, inaccuracies in feedback control systems, **223**
Yager, W. A., F. R. Merritt and C. Guillaud, ferromagnetic resonance in ferrites, **1674**
Yamakawa, K. A., AgBr crystal counters, **2511**
Yeh, Chai, and E. L. Chaffee, h.f. impedance of low-pressure gaseous diodes, **778**
Yemm, H., with J. R. Tillman, decay of current in Ge diodes, **1528**
Yeo, D., with J. T. Kendall, magnetic susceptibility and anisotropy of mica, **1687**
Yorke, R., and K. R. McLachlan, amplifier of variable output impedance, **2681**
Yost, D. M., with W. V. Goeddel, ferromagnetism in Mn-In system, **2442**
Young, C. W., proposed numbered frequency-band subdivision plan, **2269**
Young, D. R., temporary enhancement of hysteresis in BaTiO$_3$, **(D)2207**
Young, J., with others, sound transmission through single and double walls, **(A)1811**
Young, J. Z., and F. Roberts, flying-spot microscope, **1733**
Young, M., with J. Ruze, measurement of reflection coefficient of metal-plate structures, **1880**
Young, R. S., with H. R. Clayton, ultrasonic lamination flaw detection equipment, **3072**
Young, R. T., Jr, L. W. Holmboe and W. E. Waters, Jr, back heating of magnetron cathodes, **789**
Youtz, P., with others, e.s. storage tube, **1034**
Yu, Y. P., measuring vector relationships, **3058**
—— H. E. Kallmann and P. S. Christaldi, millimicrosecond oscillography, [illegible]
Yustein, S. E., R. R. Winans and H. J. Stark, aging of plastics under various climatological conditions, **2453**

Z

Zablocki, H. S., with L. A. Rosenthal, electronic differential a.c. voltmeter, **689**
Zadeh, L. A., correlation functions of phase and delay-modulated signals, **2536**; linear varying-parameter networks, analysis of, **834**, band-pass low-pass transformation in, **591**, constant-resistance, **(A)2122**, **2667**, correlation functions and power spectra in, **586**, initial conditions in, **2668**, stability of, **2124**
Zakheim, J., oscillator frequency stabilization, **1118**
Zappacosta, A. D., with others, design of mobile equipment for 152-174 Mc/s, **989**, **1782**
Zarem, A. M., F. R. Marshall and F. L. Poole, Kerr-cell photographic shutter, **235**
Zanderer, J., with others, inaccuracies in feedback control systems, **223**
Zeluff, V., and J. Markus, Electronics Manual for Radio Engineers, **(B)1750**
Zener, C., interaction between *d*-shells in transition metals, **2441**
Zenner, R. E., magnetic recording with a.c. bias, **1837**
Zepler, E. E., valve input conductance at v.h.f., **1804**
—— and S. S. Srivastava, interelectrode impedance in triodes and pentodes, **2590**
Zetrouer, W. F., II, with W. J. Kessler, l.f. ionosphere soundings by observation of atmospherics, **(A)2263**
Zhelestsov, N. A., theory of symmetrical multivibrator, **2867**
Ziegler, H., with E. Stiefel, natural eigenvalue problems, **1176**
van der Ziel, A., induced grid noise in triodes, **2878**
Zijlstra, P., with E. G. Dorgelo, two transmitting valves for mobile

- installations, 2062
- **Ziniuk, M. A.**, four-gun oscilloscope, (A)2226
- **Zinke, O.**, wide-band aerials, for decametre and metre waves, 571, for m and dm waves, 572, and resonant compensation circuits, 1310
- **Zisler, S.**, impedance characteristics of thick cylinders, 2645
- —— with J. L. Steinberg, detection of solar r.f. radiation reflected by moon, 626
- —— with others, correlation of geomagnetic and solar activity, 2983
- **Zoner, H.**, with others, electrical properties of grey tin, 2438
- **Zollers, S. M.**, with J. H. Reisner, permanent-magnet electron microscope, 1457
- **Zucker, F. J.**, behaviour of microwaves in focal regions, (A)2100
- **Zuidhof, R.**, Wien-bridge network modifications, 403
- **Zunick, M. J.** and J. B. Gosling, glass selection and production techniques for X-ray and other tubes, 2314
- **Zurmühl, R.**, Matrizen, (B)1955
- **Zwikker, C.**, absorption of sound by porous materials, 272
- **Zwislocki, J.**, acoustic filters as ear protectors, 1553; theory of action of cochlea, 1052
- **Zworykin, V. K.**, television, electronics in, 253, camera tubes and applications, 483, industrial, 1505

SUBJECT INDEX

SYMBOLS (A) Abstract, (B) Book Review, (C) Note of Correction, (D) Discussion

A

- **Abacs,** (See also Charts; Nomogram)
  - for calculation of field strength of u.h.f. aerial systems, 2814
  - and graphs, for distortion in i.f. amplifiers, 1122
  - for minimum-loss matching pads, 1587
  - for mismatch error in series-connected attenuators, 317
- **Absorption,** (See also Acoustics; Ionosphere)
  - acoustic, comparison of measured and calculated coefficients, (A)1811
    - in fluids, mechanisms of, (A)529
    - in fog, 2614
    - long-tube method for field measurements of, (A)548
    - of materials at high hydrostatic pressures, (A)545
    - of porous materials, 272, (A)1811
  - atmospheric, microwave, Van Vleck-Weisskopf equation, (A)2685
  - ionospheric, and forecasting, 728
    - and Lorentz polarization term, 2428
    - at 150 kc/s, (A)2712, vertical-incidence, 1901
  - microwave, of gases, applied to analysis of gas mixtures, (A)2158
    - and molecular structure, 619
  - u.h.f., in organic liquids, 1356
    - in substituted benzene compounds, 2162
  - ultrasonic, in air, effect of humidity on, 1049
    - and dispersion, in water, 1548
    - in liquids, (A)531, 1550
    - in $MgSO_4$ solutions, (A)530, 1549
- **Acoustics,** (See also Absorption; Impedance; Sound; Ultrasonics)
  - of amphitheatres, study with small-scale models, (A)549
  - of auditoria, criterion for short-period transient response, (A)546
  - bibliography, 1, 1042, 1541, 1812, 2309, 2608
  - of concert hall, South Bank, London, 802
  - of coupled rooms, 15
  - design of sound-absorbing ducts, (A)1811
  - equipment for field measurement of reverberation times, (A)1811
  - of halls, new theories of, 803
  - masking of pure tone at gap in thermal-noise spectrum, (A)544
  - multiple-echo effect due to release of stored wave-train, 1819
  - radiation pressure in, 2888
  - of rooms, automatic measurement of reverberation time, 1830
    - record-rerecord test of, (A)1811
    - reverberation time and sound power requirements, 14
  - source impedance and gas-column attenuation measurement, 13
  - standard pitch for B.B.C., 1820
  - of studios, for broadcasting, 1833
    - and of microphones, relation between, 801
  - threshold and loudness of repeated bursts of noise, (A)543
  - viscosity effects in acoustic inductances, (A)1811
  - wide-range acoustic termination, (A)1811
- **Admittance** meter, u.h.f., direct-reading, 163
- **Adsorption,** of O_2 on W, 1937
- **Aerial arrays,** broadside, reduction of side-lobe radiation of, (A)2100
  - with circular symmetry, optimum current distributions for, (A)2100
  - collinear, theory of, 1073
  - directive, with cylindrical reflector, (A)2100
    - two-tower, radiation-pattern calculator for, 2350
  - folded-dipole, Andrew Type-3000, for 148–174 Mc/s, 823
  - linear, potential theory in design of, 1308
  - loop, stagger-tuned, for l.f. loran, (A)2100
  - microwave, s.w.r. of, approximate method for, 822
  - slotted-waveguide, radiation from, (A)2642
  - television, on Empire State Building, New York, 1261, 1568
    - u.h.f., Bridgeport, design of, 284
  - wide-band, feeders for, (A)2642
- **—— systems,** coupled, complex radiation resistance of, 1846
  - for direction finding, (A)2642
  - microwave, Schmidt-type, (A)2100
  - for multichannel mobile R/T, 569
  - radar, for uniform irradiation of a surface, 117
  - wide-band, for circular polarization, 2353
  - Wrotham, horizontal-polarization slot radiator, 2340, transmission line and a.m./f.m. combining filter for, 2643
- **Aerials,** (See also Lenses, microwave; Radiation; Radiators; Transmission lines)
  - aircraft, omnidirectional, for v.h.f. and u.h.f., 2651
    - small, l.f., characteristics of, (A)2642
  - beam, and large surfaces, power radiated by, formulae for, 40
  - broadcasting, anti-fading, 2644
    - m.f., calculation of, 2916
    - simultaneous feeding by two transmitters, cross-modulation with, 1507
    - simultaneous feeding from 100-kW and 20-kW transmitters at Toulouse-Muret, 1506
  - circularly grouped, as omnidirectional and unidirectional radiators, 568
  - concentric-slot, theory of, (A)2100
  - in conducting media, analysis for, (A)2642
  - conical, wide-angle, with coaxial-line feed, radiation from, 1307
  - current distribution in, integrals in calculation of, 2917
  - cylindrical, asymmetrically driven, and sleeve dipole, 286
    - with axial slits, theory of, 821
    - thick, impedance characteristics of, 2645
  - delta, multiple-wire, 600 Ω, effect of mast and guy wires on, 1567
  - dielectric rod, polystyrene, radiation patterns of, 1570
    - radiation patterns for TM_{01} mode, 1075
    - with shaped radiation patterns, 2921
  - dielectric-rod and dielectric-tube, directive, 287
  - dielectric-tube, radiation characteristics of, 38
  - diffraction, circular, theory of, 1305
  - dipole, near conducting cylinders, theory of, 1306
    - horizontal, low, input impedance of, (D)35
  - dipole and loop, located near elliptical cylinders, patterns of, 2649
  - directive, aperiodic, for ionospheric recorders, 2646
    - receiving, response to scattered radiation, 2654, for s.w. angle-of-incidence measurements, 434
    - transmitting, 2-element, design and performance of, 2653, for λ 3 cm–3 m, for beam stations, 2352
  - for elliptical polarization, analysis of transmission between, 2346
    - complex-vector analysis for, 2419
    - measurements on, 2349
  - fan-beam, 3-cm λ, radiation pattern measurements on, site errors in, 1077
  - feeder connections, balance-to-unbalance transformer for, 825
  - feeders for, coaxial-type, 288
    - long, distortion of f.m. signals by, 43
    - phase distortion in, 1067
  - folded-dipole, impedance transformation in, 34
  - helical, circular and square, field calculations for, 1844
    - current distributions on, 2647
    - maximum directivity of, 2342
    - stranded-wire, receiving, design of, 1573
  - horn, biconical, (C)2345
    - e.m., gain of, 1847
    - rectangular, radiation field for H-mode waves in, 1843
  - ice formation on, 818
  - impedance of, analysis of, (A)2648
    - effect of input configuration on, 576
  - microwave, 824
    - phase-front plotter for, 2486
    - reflectors for, doubly-curved, design of, (A)2642, simulating infinite conducting plane, (A)1958, 2354, spherical, work at A.F.C.R.L., (A)2642
  - omnidirectional, horizontal-polarization, for 10-cm band, 2920
  - parabolic-cylinder, 1572
  - paraboloidal, 820
    - elliptical-aperture, pattern calculations for, 39
  - parallel, mutual impedance of, (D)1309
  - polar diagrams of, computer for, 282
    - model technique for, 575
    - recorder for, 1705, (A)2100
  - progressive-phase, producing specified beam shape, (A)2100, (A)2642
  - radar, cheese, for marine navigation, 1080
    - microwave, 1850
  - radiation from, effect of circular ground-plane on, 567
  - radiation patterns of, errors in lens measurements of, 2110
    - photographic method for demonstrating, 2650
  - receiving, theory of, 819
  - slot, impedance/frequency characteristics of, (D)574
    - pattern synthesis methods for, (A)2642
    - survey of, 2922
    - theory of, (C)2344
  - slotted-waveguide, 815
    - nonresonant, theory of, 2641
  - spherical, with nonequatorial feed, radiation properties of, 2343
  - television, receiving, design and production of, 1845, slot, indoor, 2559
    - transmitting, folded-dipole, temporary, at London station, 1076, supergain problems of, 2918, supergain and superturnstile, 2919
  - theory of, using vector wave functions, 3035
  - tower, sectionalized, broadcasting, performance of, (A)2270
  - transmitting, medium- and long-wave, 2341
    - 15–300-kc/s, (A)2642
  - u.s.w., radiation from, 2109
  - vertical, directivity due to parallel parasite, 41
  - wide-band, and compensation circuits, 1310
    - folded-slot, 570
    - for m and dm waves, 572
    - omnidirectional, for decametre and metre waves, 571
- **Aircraft** traffic control systems, analysis of, (A)2186
- **Alloys,** (See also Ferromagnetic materials; Magnetic materials)
  - Co-Cu and (Fe/Ni)-Cu, properties of, 655
  - Mn, ferromagnetic interactions in, 915
  - Ni, for oxide-coated cathodes, 3033
  - permanent-magnet, alnico V, magnetic properties of, theory of, 657
    - anisotropic, magnetic properties of, theory of, 658
    - magnetostriction and coercive force in, 127
  - resistance, temperature variation of, 2751
- **Altimeter,** radar, airborne, for surveying, datum correction for, 1655
- **Ammeters,** calibration above 100 Mc/s, (A)1958
- **Amplification,** by deceleration and acceleration of single-velocity beam, 2068
  - logarithmic, of weak currents by means of diodes, 2228
- **Amplifiers,** a.f., comparison of triodes and beam tetrodes, 1123, (D)2959
    - direct-coupled, 15-W, 2134
    - for F.A.S. system, 805
    - positive feedback in, 850
    - power, with variable output impedance, 2681
    - push-pull, extended class-A, 2680, single-ended, (A)2082
    - RC, with independent control of selectivity and bandwidth, 2395
    - selective, for null detector, 2390
    - tunable, variable-selectivity, 600
    - Williamson, using Type-6A5 valves, 311, very-high-fidelity, 1334
  - a.f., d.c., and pulse, maximum permissible grid-leak resistance for, 2683
  - anode-load compensation for, 304
  - background noise in, 1333
  - band-pass, with equal-ripple response, design of, (A)2122
  - buffer, neutralized, 1·7–2·4 kMc/s, (A)2122
  - class-C, with reactive load, calculations for, (A)2122
  - d.c., for biological application, 75, (C)848
    - drift compensation in, (A)2220
    - evolution of, 2884
    - using magnetic modulators, 152, (A)682, (A)2123
    - mains-driven, for photocell measurements, 2777, sensitivity limit of, 1602
    - reflex, for portable ionization-chamber instruments, 2797
    - wide-band, stabilized, 849
  - d.c. and v.l.f., valve noise in, 2879
  - differential, with bridge network for interference suppression, 2394
  - direct-coupled, feedback, compensation of zero-drift errors in, 1867
    - frequency-compensated, for 4-channel pen-recorder, 1603
    - h.f., (A)2122
    - 'starvation' circuits for, 1868
  - distributed, (A)2122
    - power and voltage, 314
    - wide-band, pulse, (A)2122
  - dynamoelectric, 46
    - Class-A operation of, 829
  - feedback, graphical solution for, 316
  - for f.m. signals, design of, 2388
  - grounded-grid, analysis of, 845
  - harmonics and intermodulation frequencies in, 2956
  - i.f., distortion in, graphs and abacs for, 1122
  - l.f. and m.f., Ge triodes in, 2958
    - measurement of gain and phase shift of, 1723
  - logarithmic, wide-band, 3063
  - magnetic, (D)1094, (D)1582
    - characteristics of, 1092, 2116
    - core materials for, 49
    - design of reactors for, 2361
    - design technique for, (A)2122
    - feedback in, 1091, analysis of, 47
    - high gain, with self-excited transductor, 2360
    - with self-saturation, 830, transient response of, (A)2122
    - series-connected, (D)1093, (D)1581
    - theory of, 48, (A)582
  - microwave, using Type 1553-416A triode, 310
  - miniature, for sound-broadcasting pickup, 312
  - mixer, klystron, application to television relaying, 256, 3127
  - with negative-resistance load, (D)599
  - network representation of admittances of, (D)2392
  - pentode, quiescent voltages and currents in, 77
  - for pickups, input circuits for, 594
  - pulse, comparison of various types, 1866
    - for proportional counters, A.E.R.E. Type 1049B, 847
    - theory of, 76
    - with voltage doubling by transmission-line reflection, 1600
  - push-pull, 'cathamplifier', 78
  - RC-coupled, bandwidth of, 1336
  - relay, selective, for recording WWV time signals, 74
  - resistance-coupled triode, maximum output from, 2393
  - r.f., design for low noise figure, (A)2122
  - selective-feedback, 1124
  - 'sensitivity factor' of, 2478
  - for slowly varying very low voltages, 1335
  - television. See Television.
  - transistor, graphical analysis for, 1101
  - travelling-wave, applications of, (A)2270
  - video, coupling by Π-section filters in, 590
    - wide-band, design of, 319
  - wide-band, for central-aerial installations, 1601
    - for c.r.o. observation of transients, 315
    - design of, 2679
    - linearization of frequency response by negative feedback, 1871
- **Analogues,** electrical, of linear systems, 58
- **Analysers,** for aerial polar diagrams, 282
  - amplitude-distribution, storage tubes as, (A)2226
  - frequency-spectrum, C.I.T., for 1–100 kc/s, 3057
    - for high frequencies, 3049
    - Philips Type SFM 101, 1964
    - for radio signals, 167
    - for radiotelegraph signals, 3056
    - for very low frequencies, 1720
  - harmonic, giving Fourier coefficients, 144
  - for velocity and density distribution in electron beams, (A)2226
  - pulse-amplitude, 99-channel, for slow counting, 1085
  - pulse-height, differential, for scintillation counters, 578
    - for proportional and scintillation counters, 2357
    - single-channel, 1577
- **Analysis,** correlation, (See also Mathematics)
    - application, to p.t.m. systems, 1487, to reception in noise, 780
  - harmonic, by search-tone method, 532
  - spectrum, of f.m. signals, 2834
- **Antimony,** plated, as substitute for Ni and Cr, 1950
- **Astronomy,** radio, (See also Cosmic noise; Solar radiation)
    - C.S.I.R.O. work on, 2421
    - equipment and techniques for, 2699
    - review of, 1363, 2698
- **Atmosphere,** (See also Absorption; Ionosphere; Troposphere)
  - circulation of, and effect on geomagnetic field, 1369
  - ionization in, sources of, 894
  - microwave refractive index of, fluctuations in, 2176
    - recorder for, (A)1958
  - refractive index of, phase-shift measurement of, 2472
  - scale-height gradient, and effects on ionization and s.w. absorption, 1644
  - upper, nomenclature for, 876, 1642, (D)1643
  - vertical distribution of ozone in, 1376, 1640
- **Atmospheric electricity,** charges on particles of mist or rain, measurement of, 355
  - measurements of field in Greenland, 1153
  - semidiurnal fluctuations of potential gradient, 1906
- **Atmospherics,** c.r. direction finder measurements in *Commandant Charcot*, 637
  - and lightning discharges, 638
  - measurements of, in l.f. band, in South Africa, 438
    - subjective, 169
    - at 170–204 kc/s, 1387
    - at 1·93 Mc/s, near Darwin, Australia, 1764
    - at 2·5–20 Mc/s, 203
  - produced by electric discharges in snow squalls, 1910
  - propagation of, 1652
  - reflection by ionosphere at night, 2184, 2185
  - statistical relation on receiver tuned to 27 kc/s, 1651
  - and study of propagation of very long radio waves, 1473, 1760
  - waveform of, c.r.o. for observation of, 2717
  - West African source of, 637
  - work of the Australian Radio Research Board on, 1999
  - 4-station observation network in the Caribbean area, 114
- **Attenuation,** of cm waves, measurement of, 841
  - in waveguides, precision measurement of, (A)1958
- **Attenuators,** cascade connected, mismatch error in, abac for, 317
  - piston and dissipative, corrections for, (A)1958
  - single-input, with multiple outputs, 1590
  - tuning, high power, for cavity resonator, 1859
  - for waveguides, calibration and use of, 1565
- **Audiometers,** calibration of, 1054
  - performance of, 1053
- **Aurora,** and anomalous propagation phenomena, 2002
  - correlation with increased cosmic-ray intensity, 2992
  - entry of protons into atmosphere during, 636
  - and geomagnetic storms, corpuscular theory of, 877
    - proposed laboratory investigation of, 1639
    - theory of, 1374, (D)2993
  - ionospheric reflection of h.f. waves during, 1649
  - Martyn's theory of, (A)2712
  - in North America, southern limit of, 1908, (A)2712
  - southward shift during magnetic storms, 873
  - spectrograms of arc over Arnprior on 30th Sept. 1950, 1650
  - spectrum of, and physics of ionosphere, 1151
  - on 19th Nov. 1949, and radio wave propagation, 2716
  - on 20th–21st Feb. 1950, ionospheric disturbance due to, 1150

thermal, of (Ba Sr)O, 917
Conductors, helicoidal, equipotentials of, electrolyte-tank measurements of, 1196
Conferences and conventions, calculating machines, Paris, January 1951, 1698; electron microscopy, Paris, September 1950, 1987; electronic components, Washington, May 1950, 840; ferromagnetism and antiferromagnetism, Grenoble, July 1950, 617, 2731; German Society for Electron Microscopy, 2nd session, April 1950, 2257; h.f. measurements, Washington, 1951, 1703; I.E.E. symposium on M.K.S. system of units, March 1950, 322; Institute of Physics, vacuum physics, Birmingham, 1950, 641; International Convention on ultrasonics, Rome, 1950, 10; magnetic materials, Washington, 1948, 49; r.f. spectroscopy, Amsterdam, 1950, 1356; Royal Society, information theory, London, September 1950, 984, 2011, 2583; semiconductors, Kiev, 1950, 2728; electronics symposium, 1950, 420, 1209
Connectors, for coaxial transmission lines, 2906
Contacts, electrical, and powder metallurgy, 923
Control, (See also Electronic applications; Frequency; Servomechanisms; Telecontrol)
automatic, for carriage of ship-model testing tank, 418
electro-analogue for study of, 2782
of home heating, 1205
process, electronic relays in, (A)2245, general discussion of, 2242
simulator for, (A)2245
industrial, design of electronic apparatus for, 2781
——**systems,** (See also Servomechanisms)
and application in industry, 2494
feedback, inaccuracies in, 223
general theory of, 2022, 2023
Converters, (See also Frequency converters)
d.c./a.c., using magnetic modulator, 2114
negative-impedance, theory of, 1323
u.h.f., design of, 442
vibratory, increase of power rating of, 1783
Cores, ferrite, high-μ, measurements on, 2736
magnetic-particle suspensions in oil, 2749
Cosmic radiation, r.f., (See also Astronomy, radio; Noise, microwave)
from galaxy, and cosmic magnetic fields, 2989, 2990
cosmic rays as source of, 1142, 2166, 2424
discrete sources of, 865
fluctuations of, 1365, 1366, 2172, effect of ionosphere on, 1634
and galactic structure, 866
origin of, 1364
at 100 Mc/s, 348
at 200 Mc/s, 867
from great nebula in Andromeda, 629
survey of work on, 1627
at 205 Mc/s, from Cygnus A, 2703
——**rays,** and aurora, 2992
correlation with solar and galactic radio noise, 1142, 2166, 2424
from galaxy, origin of, 1364
intensity change after solar disturbances, 1635
intensity increase after solar flare, 1890
and radio fade-outs, 1763
variations and origin of, 2991
——**theory,** magneto-hydrostatic fields, 1892
Counter tubes, cold-cathode, 783
gas-filled, multi-cathode, 784
Counters, coincidence, effect of cooling on, 3084
counting-rate meter, 2258
logarithmic, 2258
and counting systems, 2258
crystal, AgBr, 2511
diamond, 424
G-M, alcohol argon-filled, temperature varations in, 423
auxiliary circuits for, 1105
Co$_2$-filled, 2259
end-window type, 2258
with external cathode, discharge propagation in, 710
hydrogen-filled, 186
l.v., halogen-quenched, 2258, time delays in, 2260
methane-filled, with external cathode, deterioration of, 933
resolving-time measurement for, 715
self-quenching, temperature dependence of, (D)187
spurious discharges in, 1990, temperature effect on, 714
for ultra-violet radiation, 3085
G-M and proportional, end effects in, elimination of, 1989
line-noise interference reduction for, 1744
proportional, calibration of, 713
and ion chambers, with external graphite electrodes, 709
pulse, binary, cascaded, with feedback, 2660
current integrators for, 1462
with outputs at several predetermined counts, 1585
ring, using neon lamps, 2120
scintillation, 2258
delay coincidence circuit for, 3086
end-window, for α particles, 1230
nuclear, 3087
resolving time of, statistical limitations on, 967
survey of, 2512
spark, Rosenblum-type, properties of, 1461
ultraviolet-sensitive, after-effects in, 188
vapour-filled, oversize pulses in, 1460, mechanism for, 2510
Couplers, directional, approximate theory of, 2099
with full power transfer, (A)2100
multi-element, (A)2100
Coupling, electromechanical, 808
equations for, symmetry in, (A)554
Crystals, (See also Piezoelectric crystals, Quartz)
alkali-halide, influence of plastic flow on properties of, 129
small, spherical, production of, 3030
zinc-blende, bombardment-induced currents in, 1140
Current, direct, small, measurement of, 1195
h.f., works instruments for measurement of, 3044
weak, logarithmic amplification by means of diodes, 2228

D

Demodulator, synchronous, 204
Detectors, crystal, and use at u.h.f., 775
Si crystal, manufacture of, 2070
Diamond, as counter, properties of, 424
dielectric properties of, 2210
Dielectric constant, of air, phase-shift method of measuring, 2472
at 24 kMc/s, 1707
at λ 10 cm, 3047
of ceramics, and dependence on porosity, 380
of fibres, microwave measurement of, 686
of nonpolar fluids, experimental data on, 669
theory of, 609
static, of dipolar solids, 2195
at u.h.f., null method for measurement of, 1429, 1430
——**loss,** measurement at h.f., with rising temperature, 151
——**measurements,** application of double-superheterodyne principle to, 1960
interpretation by Cole-Cole plot, 1406
——**properties,** of diamond, 2210
of dioxan-water mixtures, 3027
of gases, at 9 kMc/s, 1426
of inorganic crystals, effect of adsorbed water on, 2969
of ketones, 1941
of liquids, at dm λ, 3046
with polar components, 666
measurement of, with magic-T bridge, 3053
at u.h.f., for small samples, (A)1958
at 300–600 Mc/s, 2763
of media containing free charges, 1875
of NaNbO$_3$ and KNbO$_3$, 3023
of organic liquids, 3074
of polyethylene terephthalate, 667
at r.f., N.B.S. measurement of, 3045
of solid crystalline proteins, etc., 2968
of solid dielectrics, microwave measurements of, 2474
of solid HCl and DCl, 2742
special waveforms for study of, 2230
Diffraction, (See also Sound)
asymptotic treatment of, 2138
of cylindrical wave by perfectly conducting half-plane, 1130
of e.m. waves, by disks, 2412, 2693, and by circular aperture, 94
at open end of circular waveguide, 2337
by paraboloids of revolution, 820
by plane wire grating, 2966
theory of, 2694
by two parallel half-planes, 2414
general laws of, critical review of, 83
by irregular screen, and ionospheric reflection, 428
of plane e.m. waves, by disks and holes, 2160
by an edge, 1619
by paraboloid, 2413
by small holes, Bethe's theory of, 1874
of pulses, by wedges and corners, 2963
of sound pulse at open end of semi-infinite duct, 288
theory of, 323, 1129
exact solution of a class of two-dimensional problems, 1620
theory of radiation from horn, 2962
of 8-cm waves, by λ/2 rods, 2159
Direction finders, aural-null, accuracy of, 119
and twin-channel c.r., comparison of, (D)118
——**finding,** aerial systems for, (A)2642
c.r. equipment for, 896
at sea, 2188
Directory, of American electronic equipment manufacturers, 1126, 3189
Discharge, (See also Breakdown)
in air at atmospheric pressure, influence of electrodes in starting, 1615
arc, Hg, low-pressure, u.s.w., resonance phenomena in, 615
high-pressure, microwave study of, 1132
initiation by auxiliary spark, 2971
low-pressure, dynamic characteristics of, 1135
corona, d.c., electrical and optical characteristics of, 2145
positive and negative, starting potentials of, 2686
corona and Townsend-type, effect of variation of parameters in, 2143
gas, d.c., noise temperature of plasma in, 1133, r.f. noise in, 2974
determination of parameters in, 2972
h.f., 85, in magnetic field, noise in, 614
high-current, magnetic field of, 2146, ring, in H or Ar, 2147
low-pressure, theory of double layers in, 1345
microwave, 332
retroaction and similitude considerations in starting of, 1131
r.f. emission due to gyromagnetic effect, 1139
spark, in air and H, effect of cathode surface on, 2973
high-current, voltage gradients in, 852
phenomena of, 2402
recent research on, 1344
——**tubes,** Hg-vapour, 3-electrode, electric field in, 2874
Discriminators, cm-wave, and application to oscillator stabilization, 1596, 2758
crystal, for f.m. oscillator stabilization, 3145
linear, for f.m. telemetry, 2783
pulse-width, 2784
Distortion, amplitude, in diverging sound wave in air, (A)520
correction, for video delay lines, 52
of f.m. signals, by linear passive network, 2676
by long feeder lines, 43
harmonic, in iron-core transformers, measurement of, 2232
harmonic and intermodulation, in amplifiers and mixers, 2956
in i.f. amplifiers, graphs and abacs for, 1122
intermodulation, in frequency-division multiplex signals, (A)2265
measurement of, 2621
in long mismatched line, effects of, 42
meter, bridge-type, 688
in multichannel f.m. relay systems, 1489
nonlinear, automatic analysis of, (A)1811, 1836
in broadcasting transmitters, measurement of, 2568
effect on perception of mistuning of musical intervals, 289
in f.m. systems, 2835
in f.m. transmission, 448
graphical representation of, 1834
influence of high-order products on, 2892, (D)2893, (D)2894
in loudspeakers, 556
phase, in feeder lines, 1067
in phase modulation, 449
quantization, in pulse-count modulation, 1488

E

Ear, (See also Hearing)
cochlea, of guinea-pig, 1556, 1557
theory of action of, 1051, 1052
information capacity of, 2618
protectors, use of acoustic filters in, 1553
Education, for engineering, and non-technical aspects of industry, (A)2308
problems of, (A)2308
selection tests for students, (A)2308
professional, for development engineers in radio and electronics, (A)2308
Electrets, mathematical theory of, 608
Electrical constants, of ground, derivation from field-strength measurements, 108
of sand at u.h.f., 2211
Electrification, static, Volta effect as cause of, 1612
Electroacoustics, definitions of terms, 51 IRE 6S1 standard on, 2310
Telefunken post-war developments in, 2327
Electrodynamics, independent notation system for, 89
reciprocity theorem of, 2690
nonlinear theory of, 618
Electroluminescence, new light source, 1341
Electrolyte tanks, factors limiting accuracy of measurement in, 1713
Electromagnetic field, associated with cavity moving in magnetic field, 90
of helix, 1349, 1350, 2691, 2978
microwave, photographic techniques for measurement of, (A)1958
in slot-excited half-space, (A)2100
of vertical dipole above semiconducting earth, 82
——**induction,** in semi-infinite conductor, 1617, 2158
——**interaction,** Wheeler and Feynman's theory of, 1137
——**theory,** current distributions on large reflecting cylinders, (A)2685
forces between sphere and wire, 2140
forces between two current-carrying conductors, 89
Huyghens' principle for e.m. wave, 2695
method of separation of variables in, 2103
Electrometers, balanced-circuit design for, 3051
ultrasensitive, design of, 1967
using vibrating-plate capacitor, 159
Electron beams, magnetic-field focusing of, 964
high-energy, radiation from, applications of, 2411
under influence of dynamic field, 854
paraxial, energy flow distribution in, 616
quantum effects in interaction with e.m. field, 2149
space-charge effects in, reduction of, 1013
transit-time phenomena in, 1088, 2071
——**diffraction,** applications in valve technique, 1735
——**emission,** (See also Cathodes)
from carburized W and Mo, 1670
from metal surfaces, as after effect, 3151
Schottky effect for polished Ta, 1931
secondary, from Ag-Mg surfaces, effect of oxide-coated cathodes on, 2056
from Al$_2$O$_3$, 2569
of bombarded Ni-Ba mixtures and Rb, 1399
and design of television cameras, 1499
influence of silicone-oil vapour on, 2740
from insulators, energy distribution of, 1347, 1511
from Ni, Mo, MgO and glass, temperature variation of, 3150
from thin films of CaCl$_2$, 2403
time delay of, 1014
systems, spherical aberration of, 1977
thermionic, bombardment-enhanced, 3152
from refractory materials, including ZrC, 1400
simplified calculations for, 1877
survey of, 2571
from ThS, 919
——**flashes,** generation and application of, 3069
——**flow,** in presence of positive ions, stability of, 611
——**guns.** See Cathode-ray tubes.
——**inertia,** 2967
——**interactions,** magnetic, in plasma, 2975
——**lenses,** apochromatic, 182
crossover properties of, 785
with cylindrical equipotentials, analysis of, 2256
elliptical astigmatism of, measurement of, 701, 702
e.s., electron-optical properties of, 1984
with elliptical central electrode, 2793
field in, fine structure of, 181
with helical axis, 1985
potential and field of, 1456
with thick central electrode, theory of, 1455, 1742, 2500
e.s. and magnetic, low-power, general properties of, 3082
rotating beam method for investigating optical properties of, (A)2245
magnetic, with bell-shaped field, optical parameters of, 705
constants of, 703, (C)2504
image formation in, 3081
optical parameters of, 1454
reduction of spherical aberration in, 183
short, optical strength of, 2795
spherical-aberration correction by conducting foils, 1219
strong, with Newtonian image-formation equation, 2505, 2796
——**microscopes,** condenser aperture device for, 1453
determination of resolving power by Fresnel diffraction, 706
electron scattering and image formation in, 966, 2502
focusing in, 1218
intermediate lens for increasing magnification range of, 185
with magnetic lenses, ratiometer for, 1217
objective for ultrathin sections, 1740
permanent-magnet type, 1457
production of spider-thread grids for, 1452
representation of atomic distances by, 2501
schlieren optics in, 1451
small, 965
survey of commercially available models, 1986
Type-OSW, 1743
100-kV, Philips, 1458
——**multipliers,** (See also Photocells)
with crossed electric and magnetic fields, 2584
secondary-emission, voltage-controlled, 2583
statistical theory of, 1023
use in magnetometers of, 2765
——**optics,** deflection of extended image, 2503
demonstration apparatus for, 3083
foci and focal lengths in, 2505, 2796
focusing in crossed e.m. and e.s. fields, 704
general properties of image, 87
refractive index and connection with Routhian function, 1741
second-order beam focusing in magnetic fields, 184
of slightly deflected charged particles, 2794
——**plasma.** See Plasma.
——**trajectories,** graphical representation in moving reference system, 770
Electronic applications, (See also Control; Heating) accelerometer, vacuum-tube, improvements in, 1215; datum correction in radar-altimeter surveying, 1655; diaphragm-type micromanometer, 952, 1439; flight simulator for training B.O.A.C. pilots, 2247; h.f. torch, 2765; I.C. engine testing, (A)2245; measurement of internal friction of materials, 2246; measurement of yarn irregularities, 419; metal locator, 1197, 1979; microwave, in industry, 1980; in naval-construction research, (A)2249; organic analysis, 3074; process control of cable-core eccentricity, 417; production of half tone blocks, 2261; recording of high-speed phenomena, 3073; register control for packaging machinery, 2787; temperature control, 1195, for furnaces, 1734; thickness gauge for insulating coatings, 696; vibrotron transducer for pressure and temperature measurements, (A)2245
——**equipment,** design in relation to dry battery developments, 3121
and economy in use of scarce metals, 2937
production methods for, 2948, 2949, 2950
temperature rise in, estimation of, 2549
Electrons, fast, energy loss on passing through foils, 2792
Electrophoresis, coating surfaces by, 3028
Electrophotoluminescence, effect of temperature on, 644
of phosphors in intense electric fields, 902
Electroplating, of selenium, 671
Electrostatic fields, plotting by use of semiconducting paper, 1427
——**theory,** energy in systems containing dielectrics, 326
Electrostriction, in liquid dielectrics, theory of, 2141
Equalizers, a.f., continuously variable, Fairchild Type 627, 2129
attenuation and delay, for coaxial lines, 835
for coaxial lines, 836
design by synthesis technique, 1591
Evaporation, in vacuo, by direct bombardment, 3029
Exhibitions, components, Paris, 1951, 2672; Festival of Britain, radio equipment at, 2073; National Radio, Castle Bromwich, 1950, 266, 512; Physical Society, 1951, 2236; R.E.C.M.F., 1951, components, 2380; S.B.A.C., Farnborough, September 1950, 447; Swiss Industries Fair, Basle, April 1951, 3190; 2nd Audio Fair, 1043

for microwave spectroscopy, 1723
monitoring station, Pailton, for civil aviation, 170
stabilization, (See also Stabilization, frequency)
for aircraft communication equipment, 2853
standards, 2224
primary, u.f. crystal units for, (A)1958
quartz-crystal, (A)1958
tuning-fork, calibration of, 2234

G

Galactic radiation, r.f. See Cosmic radiation.
Galvanometers, a.c., amplifier coupling for, 2480
Gaussmeter, underwater, 158
Generators, (See also Oscillators; Signal generators)
complex-tone, for deviation tests, 1726
e.s., Van de Graaff, voltage regulation for, 1000
200-kV, 999
mm-λ, review of, 1598
narrow-pulse, 694, (D)2776
noise, diode, frequency range of, 3060
thermal, for 30 c/s–15 kc/s, 24
thyratron, for a.f. band, 25
pulse, with fixed repetition rate, 848
incremental-delay, 1725
for mμs range, 951
for radar-equipment testing, 2489
using saturable reactors, 2362
r.f., for industrial heating processes, 2496
square-wave, five-frequency, 50 c/s–500 kc/s, 3061
ultrasonic, high-power, and applications, 1976
magnetostriction, 2612
piezoelectric, with interchangeable crystals, 795
piezoelectric and magnetostrictive, high-power, 1544
quartz, with grid electrode, 2885
siren, high-power, 1822
30–80 kV, low-power, high-stability, 2506
500-kV, using Se rectifiers, 745
Geomagnetic storms, and aurora, corpuscular theory of, 877
theory of, 1374, (D)2993
effect on propagation of decametre waves, 2806
and effect on radio communication, 2994
Martyn's theory of, (A)2712
and solar activity, 1950, 1631
southward shift of auroral zone during, 873, (D)2710
April–Dec. 1949, 1375, Jan.–June 1950, 632, April–Sept. 1950, 874, July–Dec. 1950, 1896, Sept. 1950–March 1951, 2709
Geomagnetism, 'absolute quadrupole-moment', significance of, 110
correlation with solar activity, 2983
determination of radial variation of field, 351
disturbance of field by electric railways, 1145
diurnal variations, in equatorial regions, 2707
and ionosphere currents, 2713
effect of atmospheric circulation on field, 1369
K-indices, at Abinger, Eskdalemuir and Lerwick, Jan.–Dec. 1950, 2174
at Cheltenham, Oct.–Dec. 1949, 1371, April–June 1950, 631, July–Sept. 1950, 871, Oct.–Dec. 1950, 1895, Jan.–March 1951, 2706
at Niemegk, 2425
for Polar Year 1932-1933, 872
lunar diurnal variation at Val-Joyeux, 353
magnetic disturbances, international data, for third quarter 1949, 1370, for first quarter 1950, 630, for second quarter 1950, 870, for third quarter 1950, 1894, for fourth quarter 1950, 2705
origin of, [illegible]
production of 1950 world isogonic chart, 1893
and properties of intrusive rocks, 1638
secular variation in South Africa, 1939–1948, 1373
solar-flare effects on, 2988
sudden commencements, 352
at Alibag, 1372
and impulses, hourly frequency of, 2708
at Lerwick, 2175
Graph plotter, electronic, with c.r. tube display, 1216
Ground, a.c. resistivity of, 1193
electrical constants of, derivation from field-strength measurements, 109
Gyromagnetic effect, in discharge, r.f. emission due to, 1139

H

Hearing, (See also Audiometer; Ear)
aids, commercial, engineering technique for, 1840
design of, 23
nonlinear distortion in, (A)1811
standard, for testing, 1839
binaural, cerebral mechanisms involved in, (D)2889
comparison of sound pressures in earphone couplers and in ear, (A)1811
fatigue, short-duration effects in, (A)535
frequency selectivity of ear, (D)2617
influence of interaural phase on masked thresholds, 2619
perception of mistuning, effect of nonlinear distortion on, 269
upper frequency limit for human beings, (D)2322
Heating, dielectric, load matching in, 1208
induction, h.f., in metal evaporation, 2497, for motor-car parts, [illegible] 3077
of hollow metal sphere, 2244
r.f., of metals, 2786, vacuum furnace for high-temperature research on, 3078
work-coil for, 958
induction and dielectric, h.f., equipment design and applications in France, 178, 959
Heaviside, centenary meeting at the Sorbonne, May 1950, 1041
High-voltage generators. See Generators.

I

Ignitrons, construction and applications of, 1015
for welders, load-sharing circuit for, 1739
Impedance, (See also Aerials; Transmission lines)
acoustic, measurement of, apparatus for, (A)534
converter, for electrometer, 2117
matching, using h.f. line sections, 833
minimum-loss, abac for, 1587
theoretical limitations to, 1566
measurement of, by coaxial slotted line, 1963
by resonant coaxial line, (A)1958
at u.h.f., resonance method of, 684
at v.h.f., 1962
for waveguides and coaxial lines, by circular waveguide, (A)1958
at 50-1000 Mc/s, (A)2764
theory of, and Laplace transform, 2926
vector, measurement of, sweep-frequency method for, (A)1958
Impedors, with prescribed phase characteristics, 1576
Index, cumulative, for *Electronics*, 1930-1930, 3188
Inductance, self and mutual, of solid sphere within endless solenoid, 338
Inductors, (See also Coils)
iron-cored, carrying d.c., design of, 1096
magnetic circuits for, French P.T.T. standards for, 2934
Infrared, image-converter tube, use for high-speed photography, 2250, 3080
Insulating materials, (See also Ferroelectric materials)
ceramics, h.f. losses in, 2458
inhomogeneous, permittivity of, 380
physico-chemical phenomena in preparation of, 2457
deterioration and breakdown due to internal discharges, 1688
effects of contaminants on, 130
fluid, thermodynamics of, 1611
glass, power factor as function of composition, 3031
liquid, suspensions in, formation of conducting bridges in, 2688
mica, natural and synthetic, magnetic susceptibility of, 1687
synthetic, research on, 1946
mica substitute, terratex, for use in valves, 3161
paper, metallized, for capacitors, 134
plastics, outdoor weather aging of, 2453
polymers, rheological properties of, 668
polyvinyl alcohol, electric strength of, 2748
polyvinylchloride, 1944
random noise in, [illegible]
research and developments in, 1405
resistivity of, 131
Samica mica paper, 1407
and semiconductors, modern theories on, 375
solid, breakdown mechanism in, 2148
surface ionization of, investigation by Lichtenberg figures, 2456
synthesis of, 2746
tapes, effect of fungus growth on, 3025
varnishes, 928
Insulators, for overhead lines, r.f. conductance of, 379
Interference, adjacent-band, from transmitters, measurement of, 2762
adjacent-channel and co-channel, due to several signals, 443
German laws on use of h.f. equipment, 3103
from h.v. corona, 205, 3102
from ignition systems, in p.w.m., 761
in television, suppression of, 1504
theory of, 1233
line-noise, in particle counting, reduction of, 1744
in multichannel systems, 986, (C)1780, 3100
from r.f. heating equipment, reduction of, 206
sources on overhead power lines, location of, 1483
from television receivers, (A)2292
from television and f.m. receivers, 2006
Interferometer, Michelson-type, for mm wavelengths, 950
Interferometry, ultrasonic, satellite resonances in, 797
Ion beams, production by h.f. discharge, 88
Ionosphere, (See also Absorption; Atmosphere; Wave propagation, e.m.; Waves)
absorption of long and very long waves in, 974
over Calcutta, parameters for Jan. 1945–June 1950, 881
correlation between critical frequencies and stratosphere data, 1146
currents in, rocket investigation of, 2713
data, comparison for antipodal stations, 880
definition of virtual height, (A)2712
D layer, properties and formation of, 878
echoes from D and F_2 layers on 21·7 Mc/s, 1756
effects of solar flare, 19th Nov. 1949, 885, 1143
effects of solar flares, 1381
E layer, fine structure of, 2178
E_1 layer, attenuation of extraordinary component in, 887
electron density in, 2180
determination of, 2177
F layer, effect of solar eclipse, April 1949, 2996
effect of temperature on formation of, 2995
electron-density variations during solar eclipse, 20th May 1947, 886
observations at Tromsö, June 1944–April 1945, 1378
F_2 layer, ionization of, 634, correlation with solar activity, 1149, and solar radiation, 2985, world distribution of, 1379
irregularities in, (A)2799, effect on reflected waves, 2526, 2527
position of ionospheric equator in, 882
27-day variations of critical frequencies at Huancayo, 883
fluctuations in galactic radiation due to, 1634
ionization in, distribution between E and F layers, 354
and s.w. absorption in, effects of scale-height gradient on, 1644
variations of, and ground pressure, 2999
irregularities, 980
winds and turbulence, 2179
layers, thermal splitting of, 879
lower, experimental investigation of fine structure of, 1898
magneto-ionic multiple splitting calculated by phase-integration method, (A)2712
magneto-ionic triple splitting of waves in, 1147, 2427, 2714
observations, in Adélie Land, 112
in *Commandant Charcot*, 2997
at Dakar, 1148
properties of, and position of sun, 2809
reflection, of atmospherics, 2184, 2185
of h.f. waves during aurora, 1649
of very long e.m. waves, 1474
refractive index and wave propagation in, 3094
review for 1950 and forecast for 1951, 1903
soundings, l.f., by observation of atmospherics, (A)2263
with rapid-frequency-change equipment, 1900
sporadic-E layer, at Brisbane, 1899
movements in, on 13th June 1949, 2998, on 21st June 1949, 2426
night-time, statistics of, 1377
storm, and radio-circuit disturbance, 1470
15th March 1948, 889
20th–21st Feb. 1950, caused by aurora borealis, 1150

L

Laboratories, Bell Telephone, organization and scope of, 793
Lamps, discharge, hot-cathode, as modulated light source, 2867
Lenses, (See also Aerials, microwave; Electron lenses; Radiators)
microwave, 36, (D)2924
artificial dielectrics for, (A)2100, isotropic, (A)2100
delay, using array of conducting disks, 2923, German development of, 37
effect of periodic variation of field distribution across, 573
experimental prototype of Rinehart-Luneberg lens, (A)2100
metal, determination of constants of, 2351
metal-plate, research at A.F.C.R.L. on, (A)2642, wide-angle, (D)1078, (C)2652
theory of parallel-plate media for, 1571
for u.h.f. waves, 1842
ultrasonic, of plastic materials, 1292
Light, radiation pressure in refracting medium, 1606
beams, paraxial, energy-flow distribution in, 616
velocity of, measurement of, 324
proposed new value for, 1609
Lightning, electrical processes between strokes, 2182
protective devices, performance characteristics of, 998
upward discharges from thunderclouds, 2183
Limiters, impulse-noise, Ge-diode, 445
Loudspeakers, amplitude and phase measurements on cone diaphragm, (A)2062
cabinet design for, 809, 2897
cone, quality assessment of, 2093
damping of, and performance, 2626
theoretical and experimental study of, 2328
diaphragm vibrations of, recording of, 2143
direct-radiator type, effect of mounting on response of, (A)2062
excitation of subharmonics in, 2627
physical and electrical constants for, (A)2062
explosion-proof, 2899
for F.A.S. system, 804, 805, 1832
high-fidelity, 3-unit, 276
horn, catenoidal, resonance characteristics of, 7
response peaks in, 6
improved bass response in, (A)2062
nonlinear distortion in, 556
automatic analyser for, (A)1811, 1836
response improvement by means of motional feedback, 1835
sensitivity, directivity and linearity of, 275
transient reproduction by, 2896
transient testing of, 277, (A)2062
unidirectional systems of, 555
Luminescence efficiency of organic solutions and crystals, 1396

M

Magnetic field, of circular filaments and solenoids, formulae and tables for, 91
cosmic, origin of, 2969
and gravitation, 108, 1637
interstellar, strength of, 1891
lines of force made visible, 1348
of magnetic dipole outside semi-infinite conductor, 2155
measurement of, with Bi spirals, 1431
using 'peaking strips', 2766
and regulation by nuclear induction method, (A)2226
of plane circular loop, 856

  pulsed, production of, **922**
  of stars, and rotation, **107**
    and of interstellar space, origin of, **2173**
——**materials,** (See also Alloys; Ferromagnetic materials)
  boroferrites, thermomagnetic investigation of, **653**
  powders, properties at u.h.f., **372**
  production control of permeability of, **2233**
  thermal effects due to magnetization processes in, **914**
——**measurements,** c.r.o. unit for, **2477**
  of permeability and loss for straight samples, **156**
——**properties,** after-effect in powder cores, **2446**
  of finely dispersed substances, **2406**
  magnetic viscosity, dependence on temperature, **2410**
    laws of, **2409**
    of permalloy, **2734**
  of polycrystalline metals, effects of plastic deformation on, **1676**
——**resonance,** survey of, **2965**
——**suspensions,** oscillations of, **2153**
——**systems,** with permanent magnets, optimum parameters of, **2459**
Magnetism, effect of directed stresses on shape of magnetization curve, **2408**
  ferrimagnetism and antiferromagnetism, **2977**
Magneto-chemical effect, review of research on, **2964**
Magnetometer, airborne, for mapping total geomagnetic-field contours, **1442**
  oscillation-type, **1711**
  for weak fields, use of electron multiplier in, **2765**
Magneto-optics, of electron gas with guided microwaves, **2911**
Magnetophotophoresis, review of research on, **2964**
Magnetoresistance, of alloys, **3018**
  of Bi, at 3 kMc/s, **1165**
  of Bi fibres, **373**
  of silicon-iron, **1164**
Magnetostriction, constants for single crystals of Fe/Co alloy, **871**
  effects in transformers, **2313**
  of Fe/Pd and Ni/Pd alloys, **1935**
  of Fe/Pt alloys, **370**
  hysteresis, in alnico and vicalloy, **2733**
    in high-coercivity alloys, **1936**
  and morphic effects for Ni crystal, **3020**
  of prolate spheroids, **1873**
  reversal of sign by expansion, **916**
Magnets, with air-gaps, effect of leakage in, **1947**
  permanent, design of, **1171**
    stability of, **2213**
  ring-gap, measurements on, **943**
Manometer, diaphragm-type, for pressures 1–100 μ, **1438**
Mathematics, aleatory functions, stationary, Laplacian, **1691, 1692**
    in theory of background noise, **384**
  associated Legendre polynomials, approximations for, **1415**
  calculus, operational, Heaviside's, and Schwartz functions, **932,** techniques of, application of remainder theorem to, **677,** (C)**2219**
    symbolic, application of, **930**
  correlation analysis, (See also Analysis), **1179**
  correlation functions, and application in communication theory, **1180**
    of phase- and delay-modulated signals, **2536**
    and power spectra, **141**
  differential equations, nonlinear, generalized reversion formulae applied to, **2217**
    second-order, periodic solutions of, (D)**3036**
  eigenfunction problems for periodic potentials, **676**
  eigenvalue problems, natural, **1176**
    solution by factorization method, **2216**
  elliptic difference equations, random-walk procedure for, **1416**
  evaluation of $\int_c we^{-\lambda u}dv$ by saddle-point method, **2466**
  extension of Weyl's integral for harmonic spherical waves, **3034**
  finite representation of impulse functions, (A)**2218**
  Fourier analysis, method of discontinuities in, **2215**
  integrals in calculation of aerial-current distributions, **2917**
  Laplace transform, for determination of eigenvalues, **1178**
    inversion of, **383**
  linear differential and integral operators, iteration method for eigenvalues of, **1418**
  Mathieu's equation, stability of periodic solutions of, **1583**
  matrices, eigenvalues of, calculation by punched-card machines, **1175**
    positive definite, formation of, **2941**
  Maxwell's equation, asymptotic series solution of, (A)**2752**
  Mellin transform and applications, **931**
  minimized iterations and matrix eigenvalue problem, **2465**
  smoothing of experimental curves, **2753**
  spheroidal wave functions, characteristic values of, **382**
  Struve functions, and associated integrals, **140**
    extension of Lommel integrals to, **138**
    integrals of, **139**
  Schwartz-Christoffel transformation, generalized, basic theory of, **1951**
  Tchebycheff polynomials, zeros of, **137**
  vector wave equation, solution of, **3035**
Measurements, (See also individual subjects)
  of amplitude ratio and phase at v.h.f., **1962**
  application of communication theory to, **3041**
  electrical, N.B.S. standards for, **2227**
  equipment for, British developments in, **391**
    microwave, **946, 1966,** inductive probe, **3048**
    for voltage s.w.r. at 2·6–4 kMc/s, (A)**1958**
    for 30-cm band, review of, **2479**
  mm-λ, (A)**1958**
  at 0·3–4 kMc/s, with Type-874LB slotted line, **1714**
  at 28–300 kMc/s, (A)**1958**
Metallurgy, powder, and electrical contacts, **923**
Meteorology, (See also Radar applications)
  air-launched automatic weather station, **3070**
  radio techniques for, C.S.I.R.O. work on, **2421**
Meteors, deceleration and ionizing efficiency of, **1625**
  trail echoes, fluctuation of, **359**
    interpretation of, **1885**
    recording apparatus for, **1915, 3003**
  trail ionization and effect of wind, **339**
  velocity of, **100**
Meters, a.c., rectifier-type, with reduced waveform error, **687**
  d.c., log-scale, design of, **399**
Microphones, calibration using pulse technique, (A)**553**
  capacitor, sensitivity measurement by reactance-valve method, **2624**
  high-order-gradient, using single diaphragm, (A)**1811**
  laboratory-standard, American standard Z24.4-1949 for pressure calibration of, **19**
  second-order-gradient, with single diaphragm, **20**
  tube, **273**
  ultrasonic, effects of reflected signals and electric pickup in, **1824**
Microscope, (See also Electron microscope)
  flying-spot, **1738**
Microwave optics, aperture phase errors in, (A)**2642**
  diffraction effects in focal regions, (A)**2100**
  reflectivity of metal layers, **3092**
Microwaves, (See also Measurements; Wave propagation, e.m.)
  intense, biological effects of, **175**
Mixers, dm-λ, using diodes, sensitivity of, **2824**
  harmonics and intermodulation frequencies in, **2956**
Modulation, amplitude, theory of, limited-spectrum signals in, **2829**
  frequency, linearization of characteristic for large deviation, **496**
    nonlinear distortion in, **443, 2835**
    simplified calculations using a.m.-f.m. analogy, (A)**2270**
    wide-band, simple method for, **2857**
  measurement, at maximum-amplitude points, **1826**
  phase, distortion in, **449**
  phase-to-amplitude, for u.h.f. television transmitters, **477**
  polyphase, and telecommunication filter problems, **213**
  pulse-count, quantization distortion in, **1488**
  systems, and theory of communication, **2017**
  on waveguides, using magnetrons, **1012**
Modulators, frequency, low-distortion, (A)**2298**
    using transistor, **3147**
  magnetic, for amplification of small d.c. signals, **152,** (A)**682,** (A)**2122**
  pulse, h.v., for radar transmitters, **2431**
  using Type 1553-416A triode, **310**

Monitors, automatic, for broadcasting programmes, design of, **1491, 2280**
  for f.m. 30–175-Mc/s transmissions, **1972**
  modulation, Type ON301, used by Netherlands broadcasting stations, **1971**
  recording, for aircraft-to-ground speech signals, **207**
Moon, as reflector of 20-Mc/s signals, **2264**
Multivibrator, symmetrical, theory of, **2387**
  time-delay calculation for, **72**
Musical instruments, electronic, Baldwin organ, design of, **1210**
    organ using neon-tube generators, **1445**
    4-unit, **1737**

N

Navigation, aerial, blind, application of Liouville's approximation to, **900,** and Einstein's equivalence principle, **899**
——**aids,** (See also Radar)
  aerial, automatic G.C.A., **1658**
    automatic radio compass, **2190**
    beacons, omnirange, effect of vertical aerial with counterpoise on range of, (A)**2186**
    beacons and radio ranges in Britain, **2435**
    for civil aviation, development of, **897**
    Decca, automatic course plotter, **2192,** testing at high noise level, **3062**
    distance-measuring equipment, Australian, **1392,** for civil aircraft, **1659, 1918,** echo-interference suppression in, **3007,** i.c.w. system for, (A)**2186,** 100-channel, **2722**
    general survey of, **2434**
    loran, design of transmitter for, **2300,** training operators of, **3008**
    microwave d.f., **2189**
    phase-measurement methods, precautions against errors in, **3006,** source of error in, (D)**2433**
    shoran, for geodetic distance computation, **898**
    short-range, ρ-θ, **1158**
    survey of, **3005**
    at Zürich-Kloten airport, **3009**
  C.S.I.R.O. work on, **2421**
  marine, consol, for fishing fleet, **2188**
    Decca, **2188**
    presentation of information in, **2719**
    survey of, **2188**

——**systems,** aerial, hyperbolic, **1393**
    long-distance, and l.f. ionospheric radio-wave propagation, **1761**
    pulse, **362**

Networks, (See also Circuit theory; Filters; Impedance; Quadripoles)
  amplitude and phase response computation for, **1856**
  analysis of, flow graph technique in, (A)**2122**
  biconjugate, theory of, **2939**
  bridged-T, as frequency-determining element, **2943**
  compensation, 2-pole, **61**
  compensation theorem, application to radiation and propagation problems, (A)**2648**
  coupled, circle diagrams in analysis of, **2665**
  definitions of terms in network topology, 50 IRE 4.S1 standard on, **1322**
  equivalent, for negative-grid triodes, **1321**
  generalized matrix theory of, **837**
  h.f., response of, analysis by l.f.-equivalent method, **2664**
  hydraulic, electrical equivalent of, **1855**
  impedance, quadripole, effect of losses on attenuation in, **1110**
    synthesis of, with loss distribution in reactors, **1109,** without transformers, **1108**
  Kirchhoff, synthesis by determination of purely reactive networks, **593**
  ladder, algebra for solution of, **1588**
    resistance-reactance, response characteristics of, **2374**
  linear, mathematical study of equivalence of, (A)**2122**
    variable, with one reactance, approach to steady state of, **588,** spectrum produced by, **2373**
    varying-parameter, analysis of, **834,** band-pass low-pass transformation in, **591,** constant-resistance, (A)**2122, 2667,** correlation functions and power spectra of, **586,** influence of initial conditions in, **2668,** stability of, **2124**
  load-compensation, for amplifiers, **304**
  passive, linear, distortion of f.m. signal in, **2676**
  phase-shifting, single-frequency, design of, **302**
  phase-splitting, wide-band, properties of, (D)**2123**
  pulse testing of, **2235**
  quadripole, active, transients in, **2944**
    double-T, between finite resistors, properties of, **1589**
    linear, passive, conductance diagrams for, **1324**
  RC, applied to transfer ratio synthesis, (A)**2122**
    for generation, amplification or rejection of alternating voltages, **1106**

    passive, synthesis of, **2940**
    synthesis of, (D)**1102, 2371**
  representation by superposed balanced circuits, **2671**
  synthesis of, application to feedback control, (A)**2122**
    operational calculus for, (A)**2122**
    potential analogue method for, **2370**
  theory, **2942**
    application to probability problems, (A)**2122**
    extension to biological field, (A)**2245**
    extension of Thévenin's theorem, **297**
    positive definite matrices in, **2941**
  with varying parameters, oscillations in, **595**
  wide-band, 2-phase, (D)**56,** computation of, **1103,** theory of, **1104**
  2-terminal, application of equalizer curves to design of, **2372**
    impedance functions of, (A)**2125**
  2*n*-terminal, finite, synthesis of, **65**
    passive, synthesis of, **64**
    synthesis of, **2128**
    theory and application of, **305**

Night sky spectrum from 6800 to 9000 Å, **1386**
Noise, (See also Cosmic radiation, r.f.; Fluctuations; Generators, noise; Solar noise)
  acoustic, background, in attenuating fluid medium, **2311**
    complex, with continuous spectrum, definition of, **799**
  background, aleatory functions in theory of, **384**
    in amplifiers, **1333**
    in transistors, **779**
  contact, in semiconductors, theory of, **910**
  crackle eliminators of German P.T.T. using Se rectifiers, **838**
  in electron beam, due to velocity fluctuation, **1038**
    space-charge and transit-time reduction of, **1274**
  factor, direct-reading u.h.f. meter for, **3043**
    of receiver, effect of circuit losses on, **3101,** survey of, **2532**
  figure, N.B.S. standards, **1729,** (A)**2226**
  in h.f. gas discharge in steady magnetic field, **614**
  integration, reduction in radar reception, **360**
  Johnson, energy distribution in, **50**
  microwave, from zenith, **1367**
  in oscillatory circuits, limiting of, **2960**
  random, in dielectric materials, **1689**
  resistor, measurement of, **945**
    in photoconductive cells, **2861**
  r.f., in d.c. gas discharge, **2974**
  in semiconductor rectifiers, **909, 1408**
  shot and Johnson, theory of, **2135**
  shot and thermal, identity of, **292,** (D)**293**
  in television receivers, abacs for calculation of, **3142**
  thermal, in linear circuits, calculation of, **2396**
  valve, limitation of operation of d.c. amplifiers by, **2879**
    produced by heater-to-cathode currents, **2877**
  valve-grid, induced, **2878,** and noise factor, **1535**

Nomogram, (See also Abacs)
  and slide-rule, for spherical-triangle problems in radio communications, **2754**

O

Observatory, Kiruna, for ionospheric and radio-propagation observations, **1380**
Optical systems, Schmidt, **82**
Optics, reflection reduction in, **81**
Oscillations, e.m., excitation of, theory of, **2415**
  forced, in circuits with iron-cored coils, **66**
    due to step and needle impulses, Fourier spectrum of, **68**
    in nonlinear systems, **1417**
    in quasilinear systems, **1177**
  free, of dielectric rings, **1353**
  nonharmonic, in circuits including saturated inductors, **67**
  in nonhomogeneous discrete structures, **2399**
  nonlinear, differential equation occurring in theory of, **1693**
    solution of Mathieu's equation for, **2951**
    topological methods for investigation of, **1851**
  in nonlinear systems, theory of stability of, (A)**2122**
  parametric excitation of, **1338**
  relaxation, amplitude limits for, **1852**
    new method for study of, **1872**
  relaxation and pendular, theory of, **2131**
  subharmonic, conditions for excitation of, **2627**
    in nonlinear circuits, input-phase effect on, **2673**
Oscillators, a.f., bridge-stabilized, for tuning musical instruments, **693**
  comparative survey of, **2675**
  crystal, measurement of equivalent-circuit constants of, (A)**1958**
    variable-frequency, ultrasonic, (A)**525, 1552**
  for cyclotrons, design of, **1981**
  dm-λ, using grounded-grid disk-seal valves, **1280**
  feedback, analysis of, **1860**
  frequency drift of, measurement of, **2484**
  frequency stabilization of, **1118**
  high-stability, for 2–4 Mc/s, **2819**
  linear, mathematical theory of synchronization of, **1583**
  mechanically tuned, a.f.c. of, **601**
  phase-shift, **598**
    determinantal solution for, **1597**
    oscillation generation in, **842**
  quartz-crystal, overtone, for 33–55 Mc/s, **2382**
    surface vibration patterns of, (A)**558**
  RC, feedback, Π-coupled, **309**
    sine-wave, **2955**
    test, for 20 c/s–200 kc/s, **2237**
    Wien bridge as phase-shift element in, **597**
  reactance-valve, (D)**71**
  r.f., of synchrocyclotron, pulser for, **2255**
  self-blocking, and applications, **1116**
  simultaneous excitation of two different frequencies in, (A)**2122**
  stabilized, by gas absorption lines, (A)**1958**
    for multichannel communication, **1117**
  s.w., self-excited, **844**
  sweep, 2·6–3·4 kMc/s, **414**
    3·6–4·5 kMc/s, **413**
  test, for crystal resonators, development of, **1437**
  theory of, and random noise, (A)**2122**
  transistor, graphical analysis for, **1101**
  300–4000 kc/s, with saturable-reactor tuning, **1332**

P

Particle accelerators, betatron, ejection of electron beam from, **961**
  betatron and synchrotron, magnet models for, field measurements on, **699**
    resonance damping at injection in, **1448**
  bevatron, magnet design for, (A)**179**
  cyclic, **2789**
  cyclotron, design of oscillators for, **1981**
    f.m., beam oscillations in, **1214**
    Stockholm, acceleration chamber and dees for, **2254**
  cyclotron and synchrocyclotron, **1449**
  direction and phase problems in, **1447**
  electron, linear, 10^9eV, (A)**2245**
  electronic ram, **2788**
  gas scattering in, **1446**
  linear, review of, **180**
    4–5 MeV, preliminary experiments on, **1738**
  neutron generator, 200-kV, at Uppsala, **2251, 2252**
  synchrocyclotron, air-cored, for 400-MeV protons, **1982**
    at Amsterdam, **422, 2790**
    at Carnegie Institute of Technology, timing unit and pulse deflector generator for, (A)**2245**
    at McGill University, pulser for, **2255**
    400-MeV, for Liverpool University, **2253**
  synchrotron, electron, design of, **1212**
    proton, at Birmingham University, **700**
    resonance oscillations in, **962**
    30-MeV, design and operation of, **1213**
    300-MeV M.I.T. model, **2499**
  travelling-wave, **1017**
  using Van de Graaff e.s. generators, **421**
Particles, fundamental, masses of, **97**
Permeability measurement, for straight samples, **156**
Permeameter, absolute, for magnetizing forces up to 300 oersted, **157**
Perturbations, of limited duration, method for study of, **2136**
Phase angle, c.r.o. display of, **1719**
  control, with constant attenuation, **299**
  inverter, choke-coupled, high-accuracy, **1580**
  measurement, addition circuit for, **1724**
    direct, **3058**
  meter, a.f., precision, **409**
    l.f., precision calibrator for, **2770**
Phosphors, KBr and LiF, decay of luminescence of, **904**
  luminescence spectra under X-ray and c.r. irradiation, **366**
  and phosphorescence, survey of, **123**
  and photoconductors, properties in intense electric fields, **902**
  sulphide, theory of luminescence of, **646**
  ZnS, luminescence and trapping in, **649**
  ZnS-Cu, **124**
    efficiency of, temperature variation of, **1664**
    emission and trapping in, effect of infrared on, **648**
    quenching action of long-wave radiation from, **1607, 1608**
    state of oxidation and luminescence colour of, **645**
  Zn_2SiO_4-Mn, cathodoluminescence of, **1921**
    emission spectra of, **367**
    'sub-bands' in luminescence spectrum of, **647**
Photocell applications, in colorimetry, **2248**
    servo control for solar telescopes, **2779**
    thyratron-operated baseball umpire, **1211**
  argon-filled, effect of magnetic field on characteristics of, **2040**
  electron-multiplier, German developments in, **2041**
    for photon counting, **2509**
    in scintillation counters, **1016**
    survey of, **2868**
    time dependence of sensitivity of, **3155**
  Ge p-n junction as, **2302**
  PbS, characteristics of, **2862**
    photoconductive, sensitivity and response time of, **3157**
  photovoltaic, effect of electron bombardment on, **2303**
  resistance, CdS, applications of, **2860,** preparation of, **2724**
    operating limits of, **2861**
  Se, characteristics of, **1513**
    spectral sensitivity of, **769, 3158**
  Tl_2S, photoconductivity of, **2043**
  trigger, Ge, **3154**
Photoconductivity, of composite conductors, theory of, **84**
  of Cs-Sb films, **2723**
  infrared, of valence intermetallic compounds, **2042**
  of Mg_3Sb_2 layers, **1163**
  of PbS, long-period effects in, **3156**
  of various elements, **3149**
Photoconductors, refractive index and infrared sensitivity threshold of, **1273**

Photoelectric effect, in alkali/germanium compounds, **364**
for Cs-O, Cs-S, Cs-Se and Cs-Te photocathodes, **1797**
in Cu_2O and CuO, **2859**
in oxide cathodes, **1027**
surface, in ferromagnetic materials, **2401**
theory of, **607**
——**emission**, from BaO, enhanced, **1663**
from BaO and SrO, enhanced, **365**
from Cs-Sb films, mechanism of, **643**
from Na and K, **1662**
properties of complex layers, **1272**
Photography, high-speed, iconoscope electro-optical shutter for, **1223**
image-converter tube for, **2250, 3080**
Kerr-cell shutter for, **235**
tone rendering in, **758**
Photophoresis, review of research on, **2964**
Physics, fundamental and derived magnitudes in, **2976**
Pickups, arm damping for, **(A)2082**
feedback-controlled calibrator for, **(A)1811**
Piezoelectric constants, (See also Piezoelectric crystals)
and associated constants, matrices of, **(A)610**
of ZnS, **1924**
——**crystals**, (See also Quartz)
ADP, EDT and quartz, growing of, **920**
amplitude of vibration of, **2383**
EDT, elastic and piezoelectric constants of, **128**
elasticity of, **1683**
equations of state for, **98, 99**
in flexural vibration, equivalent circuits for, **2952**
and in thickness-shear vibration, **1861**
isometric and tetragonal, h.f. vibrations of, **69**
low-loss systems, **1551**
square plates, determination of coefficients for, **2208**
Plasma, in crossed fields, fundamental equations for, **2150**
electron interactions in, **2975**
e.m. oscillations, **853**
in low-pressure Hg discharge, **2875**
in static magnetic field, **2151**
in magnetic field, properties of, **2989**
moving, e.m. waves in, **717**
Polarimeter, for 150-kc/s echoes from ionosphere, **415**
Potential, contact, of irradiated metal-oxide surfaces, **80**
problems of, dual integral equations in, **1614**
vector, method for mapping distribution of, **1428**
Potentiometer, a.c., synchropotentiometer, polar ammeter as, **162**
recording, automatic, high-sensitivity, **1969**
for 1–10^6 μV at frequencies up to 1 kMc/s, **1712**
Power measurement, h.f., with bolometer bridge Type 1651-A, **410**, wide-band bolometers for, **(A)1958**
low-level, by combining unmodulated and modulated signals, **(A)2226**
microwave, **397**, absolute, **(A)1958, 2771**
for 3-cm and 10-cm waves, **168**
spectra, and autocorrelation functions, **141**
supplies, constant-current, for electron-microscope lenses, **746**
emergency, for microwave relay systems, **234**
h.v., for e.s. c.r. tube, from r.f. oscillator, **1785**
for television receivers, **(A)2284**
for transmitters, **2550**
vibrator, performance tests for, **1702**
voltage-doubler, with saturable reactor, **1001**
Probability distributions, of resultants of two or more vibrations, **(A)678**
first-passage-time problem, **1127, 1694**
quantum calculus of, **604**
Pulses, definitions of terms for, 51 IRE 20S1 standard on, **2826**
diffraction and reflection by wedges and corners, **2963**
lengthening circuits for, **2655**
microwave, generation and shaping of, **3111**
nearly periodic, energy spectrum of, **(D)441**
sharpening circuits for, **2375**
transformation from and to sinusoidal waveform, **2927**

Q

Q measurement, inflection-point method for v.h.f., **(A)1958**
multiplier, high-stability, **2678**
Quadripoles, (See also Networks)
passive, as coupling for tuned circuits, **2945**
'gyrator', parameters of, **301**
with specified parameters, synthesis of, **57**
theory of, application to waveguides, **814**
Quartz, α- and β-, piezoelectric constants at various temperatures, **650**
crystals, equivalent-circuit constants of, measurement of, **392**
large, growing of, **3024**
measurement of oscillation amplitude of, **2774**
overtone, for oscillators, **2382**
for radio equipment, production of, **1938**
X-cut, equivalent circuit for, **561**, free from harmonics, **1169**, Straubel, sound field of, **5**
zero-temperature-coefficient, **2452**
piezoelectric constants of, temperature coefficients of, **921**
plates, interferometric studies of vibration of, **1939**
production of, cutting-angle control in, **663, 664**, lapping and final frequency adjustment, **1940**
resonators, temperature dependence of, **2741**

R

Radar, (See also Navigation aids)
airborne, for observation of precipitation, **892**
application to geodetic surveying, **1154**
clutter reduction with logarithmic receiver, **3096**
Decca Type-I, for harbour control, **1912**
development in French navy, **2187**
dummy reflecting objects, German use of, **358**
echo boxes, optimum operation of, **2720**
echo from lightning, **1657**
echoes from clear sky, **2711**
echoes from meteor trails, interpretation of, **1885**
recorder for, **3003**
echoes from rain, **(D)1155**
and rain distribution in showers, **1385**
and mechanism of rain formation, **1648**
reduction by circular polarization, **(A)2186**
echoing areas of conducting bodies, **(A)2186**
integration-noise reducer for, **360**
marine, adverse effects of weather on, **1228**
developments in, **1391**
Marconi Radiolocator IV, **361**
Model TB-140 ramark beacon, **1916**
Radiolocator equipment for, **1911**
port facilities at Sunderland, **1388**
p.p.i. displays, graphechon tubes for, **3182**
pulse modulators for, **2431**
radio developments leading to, **639**
range, application of noise statistics to prediction of, **1390**
theory of, **395**
systems, analysis of, new basis for, **357**
automatic-tracking, angular jitter in, **1389**
resolution in, **3002**
visibility of echoes in, **1658**
Radiation, (See also Aerials)
e.m., from circular current sheets, **31**
from fast particles in magnetic field, consequences of, **1346**
from line source, effect of grounded dielectric slab on, **2106**
from magnetic dipole in spherically symmetrical stratified medium, **2800**
nuclear, ion chambers and ion-chamber instruments for, **2258**
r.f., in ionized gas, and solar radiation, **95**
Radiators, (See also Aerials; Lenses)
horn, theory of, **2962**
microwave, virtual, **(A)2100**
slot, effect of periodic variation of field distribution across, **573**
Radio, B.B.C. research on, **2881**
communication station, Burnham, Somerset, **452**
equipment, Service, relation between production, operation and maintenance of, **(AD)1539**
progress during 1950, **2604**
research, by Telefunken, 1939–1945, **2882**
systems, using periodic signals, design of, **736**
——**links**, (See also Communication systems; Radiotelephony; Relay systems; Television)
Afourer/Bin-el-Ouidane, passive relays for, **220**
design of radiotelegraph receiving system for, **2822**
dm-λ, planning of, **1245**
international possibilities of, **218**
microwave, for Bonneville Power Station, **1777**
multiplex, field tests of, **1243**
polarity diplexing in, **3113**
for power-system applications, **217**
problems of, **(A)216**
Tasmania/mainland, propagation measurements for, **1759**
teleprinter, with automatic fault correction, **2837**
u.h.f., for Spain, **2836**
v.h.f. and u.h.f., in Australian P.O. network, **1778**
Radioactivity, measurement instruments for, **3079**
Radiosonde, code-transmitting, **2243**
international trials, May 1950, at Payerne, **697**
Radiotelegraphy, network in N.W. Western Australia, **1772**
overseas, equipment at Frankfurt a. M., **446**
4/2-channel time-division multiplex system, **3108**
Radiotelephony, (See also Communication systems; Radio links)
automatic calling device for, **2015**
control-terminal equipment for, **1773**
directional-transmission tests in Alps, **219**
mobile, proposed services for Australia, **1774**
urban, 6-channel system with 60-kc/s spacing, **741**
U.S. highway system, study of, **2279**
v.h.f., ship/shore system for Liverpool harbour, **221**
multichannel, v.h.f., application of f.m. to, **(D)1241**
new London terminal for, **2539**
overseas, equipment at Frankfurt a. M., **446**
u.s.w., Telefunken post-war developments, **2538**
Rain, origin of electric charge on, **2429**
scattering of 10-cm radio waves by, **1385**
Reactance and inductance, measurement with double potential divider, **[illegible]**
Reactors, saturable, characteristics of, **1315**
with resistive load, response of, **(A)2932**
Receivers, (See also Television)
adjacent-channel-rejection, for mobile systems, **1480**
amateur, for c.w., a.m., f.m., p.m., and s.s.b. with carrier suppression, **439**
broadcasting, high-fidelity, a.f. amplifier stage for, **440**, h.f. circuits and power supply for, **982**, cathode-coupled frequency changer for, **2817**
printed-circuit techniques in manufacture of, **(A)2292**
speech silencer unit for, **(A)2265**
Telefunken, post-war, **2530**
Type T.R. 153, using cathamplifier circuit, **2818**
communication, design of, **2004**
dual-diversity frequency-shift, **2823**
Telefunken, post-war, **2529**
f.m., detector circuits for, **1479**
measurement of spurious radiation from, 51 IRE 17S1 standard on, **3099**
u.s.w., commercial, **2821**, démodulation in, **2820**
for 88–108 Mc/s band, **731**
high-sensitivity, for cosmic noise, calibration of, **2487**
logarithmic, successive-detection, **3096**
performance tests on, **1727**
pulse, comparison of amplifier circuits for, **1866**
s.s.b., a.f.c. for, **2003**
for R/T, **2266**
subminiature, radio-range, **3097**
190–550 kc/s, **(A)2265**
Reception, (See also Field strength; Television, Wave propagation, e.m.)
diversity, comparison of systems for, **2267**
for facsimile, comparison of systems for, **3124**
for 7–16 Mc/s, performance of different systems, **2268**
of periodic signals in noise, application of correlation analysis to, **780**
and rectification, of signals in presence of noise, **3098**
of repetitive signals in noise by cross-correlation, **(A)2265**
signal/noise improvement by integration, **732**
spaced-aerial, of ionospheric waves, diversity effects in, **1232**
of 450-Mc/s and 150-Mc/s R/T transmissions by mobile receiver in New York, **734, 1766**
Recorders, (See also Sound recorders)
field-strength and wave-direction, for λ 3·2 cm, **2523**
ionosphere, automatic, for range 0·55–17 Mc/s, **1191**
panoramic, for range 1–20 Mc/s, **1425**
0–20-Mc/s, **(D)1192**
magnetic-tape, for 1–100-c/s electrical signals, **970**
for μs-pulse amplitudes, **402**
monitoring, for aircraft-to-ground speech signals, **207**
range-adjusting, for radiosonde, **176**
for rate drift of timepieces, **938**
Recording techniques, photographic, for c.r.o., **675**, speed of, **2768**
Rectification, and reception, of signals in presence of noise, **3098**
Rectifiers, (See also Transistors; Valves, crystal)
Al-Al_2O_3-electrolyte, properties of, **1254, 2286**
barrier-layer, back current in, **374**
formed by welding two metals, **2729**
heterogeneous, theory of, **2744**
temperature dependence of barrier height in, **3153**
theory of, **3026**
with buffer capacitors, calculation of, **994**
contact, thermal instability of, **2212**
crystal, with heavy d.c. bias, impedance of, **1532**
crystal-diode, theory of, **2677**
Cu_2O, conductivity contour of barrier layer in, **997**
dielectric properties of, **925**
Cu_2O and Se, review of, **3119**
disk, characteristics of, **2840**
measurement of capacitance of, **940, 941**
dry, nonuniform distributions of impurity centres in, **924**
Ge, effect of composition of contact point on, **1942**
n-type, hole concentration in and point-contact characteristics of, **376**, point-contact, inverse-voltage characteristic of, **1530, 1531**
p-n junction, **2302**, preparation by impurity diffusion, **378**, theory and experiment for, **1669**
point-contact, electron-bombardment-induced conductivity in, **1685**
Ge-diode, current decay in, **1528**
h.v. reverse current of, **1529**
manufacture and properties of, **2059**
high-power, new types of, **225**
Se, capacitance of, **744, (D)1250**
electrical forming effects in, **926, (D)1943**
as limiters in crackle eliminators, **838**
origin of time-lag effect in, **1686**
Tl-containing, forming processes in, **1170**
theory of d.c. characteristics of, **2743**
Reflection, (See also Sound; Wave propagation, e.m.; Waves)
of e.m. waves at discontinuity of permittivity or permittivity gradient, **723**
nonspecular, by surfaces with bosses, **2692**
of pulses, by wedges and corners, **2963**
of 30-cm waves from Hg-arc discharge, **1618**
Reflectors. See Aerials, microwave.
Regulators, voltage, stability of, **(A)1251**
Relay systems, (See also Communication systems; Radio links; Radiotelephony; Television)
f.m., multichannel, distortion in, **1489**
microwave, **215**
TD-2, New York/Chicago, **450**
travelling-wave amplifier as repeater for, **(A)2270**
wide-band, long-distance, measurement techniques for, **(A)1958**
Repeaters, negative-impedance, **1770**
portable, for B.B.C. outside broadcasts, **2881**
Research, in Metropolitan-Vickers laboratories, 1950, **2075**
Resistance, of metal plate with internal electrode, **2142**
of Pt foil, variation due to gas adsorption, **125**
of single crystals of tin at 9·4 kMc/s, **329**
standards, h.f., for calibration of admittance bridge up to 60 Mc/s, **601**
Resistivity, a.c., of ground, determination of, theory of, **1193**
Resistors, borocarbon, **583**
carbon and borocarbon, production and properties of, **2365**
printed, quality of, **1584**
SiC, in series with impedance, **2657**
wire-cage type, for h.f. measurements, **2759**
Resonators, acoustic, apertured-panel type, absorption by, **2325**
apertured-plate, impedance of, **2321**
damping of, **2067**
with elastic walls, oscillations in, **300, 1293**
spherical, calculation of λ for, **2320**
cavity, coupled, oscillations in, theory of, **1115**
cylindrical, with d.c. discharge, **1595**
effect of introducing dielectric ring into, **1862**
e.m. oscillations in, approximate calculation of, **1594**, theory of, **2953**
as interstage transformers, **308**
perturbation effects in, **70**
Π-type, calculation of, **2385**, design of, **2386**
piston-type, for m and dm λ, **2954**
crystal, (See also Quartz resonators)
measurement of electrical characteristics of, **1704**
e.m., phenomena near natural frequency of, **1863**

S

Screening, e.m., **458**
Seals, glass, butt and graded, theory of stresses in, **3032**
glass/metal, Ni-Cr-Fe alloy for, **674**
physics of, **135, 929, 1173, 2461**
metal/ceramic, using Mn/Mo mixture, **1410**
properties of interface, **(A)2194**
mica/glass and mica/alloy, **2462**
quartz/Mo, for high-temperature lamps, **381**
Semiconductors, adsorption of gases on, **1667**
aggregation of trapping centres in, **1926**
asymmetrically illuminated, rectification in, **3013**
bornite, characteristics of, **1930**
CdO, electrical properties of, **2200**
Hall constant of, **1678**
CdS, dependence of electrical properties on electrode arrangement, **1188**
conduction phenomena in, **2726**
contact noise in, theory of, **910**
controlled-valency, **905**
and dielectrics, modern theories on, **375**
energy gap in, temperature dependence of, **3016**
excess, parameters of, **3014**
Fermi levels in, **906**
Fermi limiting energy of, **1876**
Ge, effect of heat treatment on electrical properties of, **2201**
electron mobility in, **662**, in strong electric fields, **1398**
magnetoresistance at 20°–300°K, **661**
mobility and life of injected holes and electrons in, **1928**
n-type, conductivity changes due to α-particle bombardment, **1162**, hole diffusion in, **1668**
p-type, high-resistivity, properties of, **660**
preparation and properties of, **1681**
pressure dependence of resistance of, **1161**
production of single crystals containing *p-n* junctions, **1682**
thin layers, electrical properties of, **3021**
grey tin, electrical properties of, **2199, 2438**
Hall coefficient for, **1357, (D)2206**
impurity, Fermi level in, **1343**
impurity-band conduction in, mechanism of, **907**
lattice-imperfection phenomena in, **2197**
magnetoresistance of, theory of, **612**
measurement of impurity content of, **1927**
with mixed conductivity, diffusion of current carriers in, **2440**
mixed-crystal, properties of, **2727**
n and *p* types, contact theory for, **2745**
polycrystalline, dielectric dispersion in, **2196**
research at National Bureau of Standards, **1666**
resistance of, effect of lattice irregularities on, **911**
effect of pressure on, **2439**
resistivities in, combination of, **3015**
SiC, physical properties below 1000°C, **1680**
statistical fluctuations in, **909**
theory of flow of electrons and holes in, **377**
Servomechanisms, (See also Control systems)
carrier compensation for, **993**
compensation of zero-drift errors in, **1867**
contactor, analysis by frequency-response methods, **224**
critical gain of, determination of, **2021**
crystal-controlled, for control of rotating drum, **2020**
with linearly varying elements, stability of, **(A)2547**
network synthesis applied to, **(A)2122**
relay, analysis of, **992**
theory of, **743**
shunt motor, with inertia load, **1249**
steady-state and transient performance of, **222**
test methods for, **457**
Signal generators, (See also Test equipment)
for television testing, **1202**
terminal voltage of, **411**
variable-phase, **(A)2226**
0–30 Mc/s, **(A)2229**
Signal/noise ratio, for periodic systems, and cross-correlation, **(A)2265**
Signals, f.m., theory for spectrum analysis of, **2834**
phase- and delay-modulated, correlation functions and spectra of, **2536**
random, with limited spectra, theory of, **3166**
resolution into $\cos^2$ components, **2933**
Skin effect, and current distribution in conductors at h.f., **1613**
laminated conductors for reduction of, **2906**
Slide rule, and nomogram, for spherical-triangle problems in radio communication, **2754**
Snow and rain, radioactivity of, **893**
Solar activity, and geomagnetic activity, **2963**
and geomagnetic storms, 1950, **1631**
index, ionospheric, calculations of, **884**
influence on cosmic-ray intensity, **1362**
physical significance of character figures, **862**
Jan.–June 1950, **106**
——**atmosphere**, and origin of r.f. radiation, **341**
r.f. data on, **625**
——**constant**, **102**
——**corona**, e.m. radiation from, location of source of, **1628**
——**flares**, corpuscular streams from, **1888**
possibility of observation of, **1889**
geomagnetic effects of, **2968**
ionospheric effects of, **1381**
19th Nov. 1949, effects of, **885, 1143**
——**radiation**, and F_2-layer ionization, **2985**
r.f., **103**
correlation with cosmic rays, **1142, 2166, 2424**
dm-λ, from quiet sun, long-period change in, **2171**
during eclipse, Sept. 1950, **1633**
fluctuations of, **1358**, explanation of, **1359**, mechanism of, **1360**
m-λ, enhanced, **2170**, high-intensity, spectrum of, **1689, 1690**, spectra of 'isolated bursts', **2169**
and motion of material in the solar atmosphere, **2167**
from quiet sun, **344**
reflected by moon, **826**
and r.f. radiation in ionized gas, **95**

source points of, and solar flare, 2986
and sun's general magnetic field, 860
from sunspot of 14th June 1950, 2700
survey, 104, 1627, 2422
two large disturbances in Feb. 1950, 2168
at 81·5 Mc/s, distribution across solar disk, 2987
at 156 and 164 Mc/s, 627
at 1200, 600 and 200 Mc/s, (C)861
at 3·3 kMc/s, 2984
at 1·25 cm λ, 342
at 3·18 cm λ, 343
at 10 cm λ, during eclipse on 1st Nov. 1948, 347
at 50 cm λ, during eclipse on 1st Nov. 1948, 346
ultraviolet, from chromosphere, 1632
Soldering, and solders, recent advances in, 1172
ultrasonic equipment for Al, 1732
Sound, (See also Absorption; Acoustics; Diffraction; Reflection; Wave propagation; Waves)
attenuation, in water containing air bubbles, (A)1811
of higher-order modes in acoustic waveguides, 2615
diffraction of plane wave by paraboloid of revolution, 1047
distribution systems, cables for, 2905
fields, automatic plotter for, (A)519
automatic regulator for strength of, 2628
criteria for randomness of, (A)547
first- and second-order, with viscosity and relaxation, (A)1811
near focus of parabolic reflector, 2315
intense, sonic wind and static pressure in, (A)518
of oscillating disk, 4
of piston, analysis of, 2312
of pulse in semi-infinite duct, 268
radiated and diffracted by plane obstacles, relation between, (A)1811
wave-front plotter for, (A)517, 1547
high-intensity, effects in ear, (A)537
loudness of, calculation and measurement of, (A)542, 2324
measurements, and analysis, equipment for, (A)1811
anechoic chamber for, 2088
pressure measurement at high frequency, 1555
propagation, and atmospheric turbulence, 267
over great distances, 1542
in ocean, and surface sound-velocity gradient, 1044
radiation, in public-address systems, 2890
from semicircular disk, 138
ranging, for determining torpedo trajectories, (A)116
reflection, nonspecular, from absorbent surfaces, (A)1811, from planes with absorbent bosses, 2316, from planes with non-absorbent bosses, 9
of spherical wave from infinite plane, 2318
reinforcement systems, Church House, Westminster, 1828
comparison of arrays and distributed systems, 1829
recent developments in, 1294
scattering, and absorption, by soundproofing strip, 2314
by layers in the sea, 2083
by nonabsorbing sphere, 2317
by solid cylinders and spheres, (A)522, 2611
sources, line, synthesis of directivity pattern for, (A)1811
piston, high-frequency, theory of, 1546, velocity potential of, (A)521, 1815, 1816, (C)2610, vibrating freely or in finite wall, radiation field of, 1817
transmission, in granular materials, parameters for, 16
through partitions, 2616
through plate at oblique incidence, 1046
through walls at oblique incidence, (A)1811
velocity, in He, 515
in sea water, (A)514, 1814
waves, plane progressive, nonlinear interaction with small sphere, (A)1811
space pattern of, photographic method for displaying, (A)1811
——**recorders,** disk, square-wave testing of, (A)551
magnetic, ferrite recording heads for, 2445
for motion pictures, 2629
R.C.A. Type RT-11A, 2094
survey and applications of, 1560
Type MI-10794 head for, 807
and reproducers, British, 1559
——**recording,** disk, microgroove, optimum speed for, 2329
stylus sharpening process for, 2903
film, c.r. tube arrangement for, 1838
magnetic, 811
with a.c. bias, 1837
a.c. erasing heads for, 2630
accidental printing in, 810
developments in Great Britain, 1065
for motion pictures, 2901, in Germany, 2631
——**records,** disk, constant-frequency, calibration of, 533
——**reproducers,** disk, square-wave testing of, (A)551
magnetic tapes for, tests on, 557
and recorders, British, 1559
——**reproduction,** bass tone control in, 2090
disk, stylus/groove relations in, (A)550.
thorn needles in, 806, (D)1831, (D)2069
'expressor' system for music, 17
F.A.S. system, 805, 804, 1832
intensity level and listeners' tonal-range preferences, (A)536, 2891

wide-band equipment for, 475
Temperature coefficients, of circuit components, measurement of, 2476
Tesla, life and work of, 2606
Test equipment, (See also Television and other individual subjects)
for a.m. and f.m. transmitters, 1964
automatic transmission-measurement set, 1194
for coaxial cables, 2231
signal generator and piston attenuator for 1–30 Mc/s, 1709
c.r.o., for display of transmission-amplitude characteristic of transmitter, (A)2226
for crystal mixers, 1200
for impedance of h.f. valves, 690
and methods, for 3-cm low-voltage klystrons, 683
for transistors, 398, 1533
Thermistors, development in France, and applications of, 44
resistance/temperature relation for, 1083
use in thermometers with linear calibration, 3067
use in ultrasonic interferometry, 3068
Thermostat, precision, for range 1000°–1550°C, 957
Thermometers, thermistor, design of, 3067
Thoria, semiconductor properties of, 2730
Thunderclouds, height of charges taking part in flash to ground, 1907
Thunderstorms, and earth's general electrification, 869
Time constants, measurement of, 1199
and frequency, measurement of, 2223
periodic fluctuation in length of day, 150
signals, transmissions in Australia, 1424
Timebases, slow-sweep, 1121
spiral, with magnetic and electric deflection, 73
Timers, electrical, 226
for moulding press, 955
thyratron circuits for control of machine operations, 956
Transceivers. See Transmitter-receivers
Transducers, $BaTiO_3$ ceramic, cylindrical, (A)559, ultrasonic, high-power, (A)560, 1818
coupling in, theory of, 808
crystal, variable resonance-frequency, 2319
electroacoustic, coupling theory for, (A)554
nonlinear distortion in, 1558
electromechanical, for producing waves in ground, 2085
linear arrays, directivity and efficiency of, (A)513
magneto-optical, 1295
mechano-electronic, for physiological applications, 2791
piezoelectric, equivalent circuits for, 2326
thickness-vibration, theory of, 99
piezoelectric and electrodynamic, 552
quartz-crystal, underwater sound field of, 1821
for servos, 2285
ultrasonic, 15–200 kc/s, construction and applications of, 2613
vibrating-string, vibrotron, for pressure and temperature measurements, (A)2245
Transductors, principles and applications of, 291
series, theory of, 1086
Transformers, a.f., iron-cored, waveform distortion in, calculation of, 1087
and chokes, minimum-cost, design of, 1853, 2931
small, Admiralty design of, 827
current, dielectric admittances in, 1089
double-ratio, 2115
toroidal, effect of capacitance on design of, 1090
double-tuned, for band-pass filters, 2929
h.f., low-power, wide-band, with laminated cores, 1579
iron-core, harmonic distortion in, measurement of, 2232
leakage reactance of, determination of, 1314

  low-power, use of Ni steels in, **289**
  magnetostriction effects in, **2313**
  mechanical, design and applications of, **2623**
  multi-winding, equivalent circuit for, **2930**
    leakage distribution in, **2928**
  output, with filter coupling, frequency response of, **2682**
  power, small, for aircraft, **(D)581**
  pulse, analysis and design of, **(A)2122**
  design of, **828**
  equivalent circuits for, **1313**
  exponential-line, **1301**
  wide-band, design of, **290**
Transients, in multiply periodic nonlinear systems, **1339**
  storage oscilloscope for observation of, **3055**
Transistors, **153**[illegible]
  background noise in, **779**
  characteristics of, analysis of, **775**
  circuits for, design of, **2369, 2662**
  effect of auxiliary current on operation of, **2591**
  in frequency-modulator circuits, **3147**
  Ge, *n-p-n*, circuit properties and applications of, **2957**
    p-n junction, **3177**
    p-type, **508**
    theory and applications of, bibliographical survey of, **778**
  in l.f. and m.f. amplifiers, **2958**
  physics and technology of, **1802**
  as reversible amplifiers, **509**
  in trigger circuits, **2661**
  with widely spaced contacts, **1803**
Transistron, amplification in, **1037**
Transmission lines, calculation of optimum load for, **(A)2106**
  coaxial, connectors for, **2906**
    correcting stubs for, **2635**
    couplings for, **2111**
    variable-length, **2907**
  curved, h.f. properties of, **2633**
  delay, of comb or interdigital type, **772**
    construction and applications of, **2914**
    continuously wound, variation of phase velocity at h.f., **2637**
    magnetic, for storing signals, **2339**
    magnetostrictive, **2107**, nickel, **(A)2100**
    for pulse lengthening, **2655**
    single-tapped coil type, **(A)2100**
    solenoid, distortion correction for, **52**
    ultrasonic, for storage of video signals, **2842**
  exponential, operation at cut-off wavelength and in stop range, **2338**
    pulse response of, **280, (C)1069**
  helical, field calculations for, **1349, 1350, 2978**
    theory of, **2691**
  h.f., for impedance matching, **833**
    long, attenuation equalization in, **2915**
  h.v., radio interference from corona on, **3102**
  impedance charts for, **1071**
  inhomogeneous, theory of, Fourier transforms in, **562, 2909**
  λ/4, resonant, radiation from, **1563**
  Lecher, sheathed, capacitance of, **29**
  matching sections for, design of, **300**
  multi-wire, e.m.-wave propagation along, **2332**
  nonuniform, e.m.-wave propagation along, **2334**
  parallel-wire, unshielded, effect of radiation on Q of resonant sections, **(A)2106**
  phase-constant determination from impedance measurements, **1710**
  problems of, geometrical solution of, **1068**
  propagation of transient and periodic waves along, **1070**
  representation by superposed balanced circuits, **2671**
  resonant, and lumped LC circuits, bandwidths of, **1107**
  r.f., skew-wire, radiation resistance of, **817**
  solenoidal, wave propagation along, **30**
  surface-wave, h.f., (See also Waves, e.m., surface), **281, 563, (D)1300, (D)2333, 2636**
  use of laminated conductors to reduce skin-effect losses in, **2908**
  for Wrotham aerial system, **2643**
  3-phase, h.f. propagation along, **1299**
Transmitter-receiver, f.m., 68–100-Mc/s, for motor cycles, **212**
  mobile, for 148–174 Mc/s, **3117**
  multiplex, 960-Mc/s, Westinghouse Type-FB, **988**
  portable, v.h.f., for military use, **2854**
    for 60–100-Mc/s band, **3109**
  50-Mc/s, for civil defence, **3110**
  112–122-Mc/s, for small aircraft, **763**
Transmitters, (See also Television)
  aircraft, 2·8–24-Mc/s, using impulse-controlled oscillator, **767**
  a.m., broadcasting, for Australia, **766**
  broadcasting, a.f. a.g.c. for, **318**
    f.m., high-power, **764**, u.s.w., for West German Federated Republic, specification for, **2856**, u.s.w., 100-W to 10-kW, **2858**
    measurement of distortion in, **2566**
    optimum spacing of, **1490**
  broadcasting and telegraphy, postwar, German, **2565**
  high-power, automatic tuning of, **765**
  for loran equipment, design of, **2300**
  measurement of adjacent-band radiation from, **2762**
  spark, 1–3 cm, for slightly damped cm waves, **2775**
  suppression of harmonics in, **3144**
  30-W, for 430 Mc/s, **2567**
  4-kW, 1036·8-Mc/s, crystal-controlled, **(A)2298**
  1–32-Mc/s, stabilized exciter unit for, **(A)2298**
Troposphere, (See also Atmosphere)
  conditions in, and cm-wave propagation, **1998**
  day-to-day variations of pressure and temperature to 5 km height, **875**
  radio-duct formation in, **1466**
Tungsten wire, recrystallization and grain growth in, **1411**
    treatment of, for valves, **1412**
Tuners, attenuating, high-power, for cavity resonators, **1859**
  television, variable-inductance, v.h.f., **1269**
    6BQ7 twin triode in, **2033**
  variable-filter, **733**
Tuning equipment, coaxial-cable, for power-line carrier-current systems, **211**
  networks, feedback amplifiers in, **1869**
    RC, bandspreading and scale equalization for, **1125**

U

Ultrasonic absorption. See Absorption.
  applications, **1976**
    determination of elastic constants of metals, **1731**
    flaw detection, **958, 3072**, developments in Germany, **3071**, examination of boiler plate and welded seams, **1441**, testing of large forgings, **2493**
    measurement of water velocity, **416**
    soldering of Al, **174**
    soldering irons for Al, **1732**
  generators. See Generators.
  interferometry, use of thermistors in, **3068**
  oscillations, effects of, on animal tissues, **1050**, on nerve tissue, **(A)526**
    generation of, **1291**
Ultrasonics, in everyday life, analysis of, **2886**
  field patterns in fluids, determination of, [illegible]
  heating of bone and bone marrow by, **(A)627**
  plastic lenses for, **1292**
  propagation, in animal tissues, **1048**
    in Ni, effects of magnetic field on, **642**
  propagation velocity, in gases at low pressures, **1828**
    in [illegible], **3064**
    in rubbers, **270**
    in solids, **(A)516, 1545**
  underwater receiver with 'point' probe, **1064**
Units, and generalized electrical formulae, **2405**
  M.K.S., **322**
    rationalized, in engineering education, **332**
  rationalization of, **323**

V

Vacuum gauges, electrical, review of, **1920**
    McLeod, reading errors of, **1159**
    using Pirani cooling of tungsten filament, **(D)640**
  pumps, diffusion, characteristics of, **121**
    ionization, **1395**
    molecular, design of, **1661**, rotary, disk-type, **1160**
  technique, effects due to silicone-oil vapour, **2740**
    efficiency of Ba getters at low pressures, **3012**
    formation of thin films of hydrocarbon, **2738**
    getter materials for, **499**
    getters, efficiency of, **122**
    problems of gas absorption in, **1679**
Valves, (See also Counter tubes; Transistor; Transistron)
  anode dissipation of, effect of high altitude on, **3164**
  beam-deflection, phase-modulator, **1805**
  characteristics, c.r.o. display of, **692, 1436, 2488**
  crystal, (See also Rectifiers; Transistors)
    Ge-diode, experimental, high-conductance, **2588**, as video detectors, **2589**
    Si, as frequency changers, **2070**
    Si- and Ge-diode, **2587**, characteristics of American types of, **2060**
    triode, review of, **2592**
  development by Telefunken since 1945, **2574**
  diode, field at cathode in, **506**
    gas, low-pressure, h.f. impedance of, **776**
    microwave, conductance over exponential part of characteristic, **3173**
    as noise generators, frequency range of, **3060**
    with oxide-coated cathodes, characteristics of, **(C)1801**, high-speed 10-V effect in, **3170**
    parallel-plane, potential and gradient distributions in, **3171**
    planar, space-charge, theory of, **2057**, space-charge-limited current in, **2585**, space-charge smoothing factor for, **2058, (D)2871**, theory of, **777, (C)1800**
    at saturation, investigation of, **3172**
    thermodynamics of, **2586, 2870**
  diode and triode, gas-filled, deionization time of, **2061**
  disk-seal, as grounded-grid dm-λ oscillators, **1280**
  double-cathode, spontaneous fluctuations in, **507, (C)3175**
  double-diode, analysis for, **3174**
  double-tetrode, v.h.f., QQE 06/40 (AX9903), **2062, 2567**
  for dry-battery operation, Type KP53, **(A)2304**
  effect of cooling on operation of, **3084**
  electrometer, Type BM4A, balanced-circuit design for, **3051**
  electron beams and e.m. waves in, interaction between, **3166**
  electron-coupler, for modulation and power control at u.h.f., **(A)2304**
  electron-wave, space-charge effects in, **3167**
    theory of, **2866**
  in ENIAC computer, maintenance of, **3163**
  for frequencies above 3 kMc/s, survey of, **1520**
  gas-filled, plasmatron, **(A)2304, 2869**
    rectifier, fundamental processes in, **258**
  glow-discharge, voltage-regulator, extinction voltages of, **3159**
  grid contact potential and grid current in, **264**
  high-power, demountable, for s.w. service, **2578**
  klystron, low-voltage, 3-cm, test methods and equipment for, **683**
    reflex, Type RHK 6332, for operation at 3-cm λ, **2069**
    single-cavity, for microwave relay links, **(A)2304**
    three-cavity, Type X-15, **(A)2304**
    Type SAC-19, as mixers, application to television relaying, **858, 1127**
    Type Z 1891, **2849**, with 6-Mc/s bandwidth, **(A)2304**
  life expectancy of, statistics of, **2045**
  life testing of, **2773**
  low-power, 500–1500 Mc/s, design of, **2065**
  magnetron, back heating of cathodes in, **789**
    in cut-off state, cylindrical type, **2600**, planar or quasi-planar type, **2599**, transition from cylindrical to planar type, **3185**
    cylindrical, multianode, analysis of space charge in, **2601**
    electron-optical mapping of space-charge field in, **1988**
    electron orbits in, **3186**
    frequency characteristics of, effects of space charge on, **1282**
    l.v., tunable, Type PAX3, **3184**
    mode interaction in, **(A)2304**
    multianode, single-cavity-resonator type, **(A)2304**
    for operation at 3-cm λ, **2066**
    planar, theory of, **2598**
    split-anode, operation of, **1120**
    for waveguide wide-band modulation, **1012**
  manufacture, Al-clad iron as Ni substitute in, **1949**
  materials for use in, **3161**
  miniature and subminiature, reliability of, **2573**
  multigrid, e.s. field in, **1279**
  new materials for, **(A)2194**
  nitrocellulose-base cements in, **1798**
  with oxide cathodes, life of, **3168**
  parallel-beam, theory of, **1018**
  pentode, input conductance at v.h.f., **1804**
    internal resistance of, **265, 3179**
    R.C.A. Type 5879, miniature, low-noise, **2063**
  performance analysis for large signal voltages, **1517**
  power, high-vacuum, rating of, **1799**
    secondary emission in, **(A)2304**
  reflex resnatron, **(A)2304**
    for wide-band operation, **(A)2304**
  residual-vacuum characteristic of, **1660**
  robust, design of, **2863**
  signal-retardation, with delay modulation, **2576**
  space-charge distribution in, **1514**
  switching, radial-beam, 30-element, **1030**
  television, transcontinental series of, **3162**
  test methods and apparatus of French P.T.T., **2772**
  tetrode, power, u.h.f., **(A)2304**, for 50-kW output up to 110 Mc/s, **(A)2304**
  thyratron, grid-circuit design for, **1983**
    hot-cathode, characteristics of, **(D)782**
    hydrogen-filled, switching-time limitations in, **(A)2304**
    pulse measurement of deionization time of, **781**
    trigger-grid, **2873**
  transmitting, end-cooling of filaments in, **1024**
    high-power, u.s.w., **2872**
    Types QQE 06/40 and QQC 04/15, **2062**
  travelling-wave, **501, 502, 1017**
    amplification of, **2579**, at 6-mm λ, **1521**
    'backward' gain in, **1019**
    comb and interdigital delay lines for, **772**
    using delay devices, **2865**
    with dispersive helices, **2581**
    effect of velocity spread of beam electrons on, **2580**
    with magnetic field, **1020**, anticyclotron, **260**, space-charge effects in, **1022**
    miniature, for 100 Mc/s to 1 kMc/s, **(A)2304**
    periodic-waveguide, for medium powers, **2047**
    small-signal theory of, **261**
    space-charge effects in, **262**
    theory of, **854, 1518**
    transmission-line equivalent of, **2046**
    with transverse electric and magnetic fields, **1276**
    wide-band swept-frequency measurements for, **(A)1958**
    10-W, Type-5929, **1519**
  triode, amplifier, microwave, **780**
    disk-seal, feedback admittance of, **2593**
    input conductance at v.h.f., **1904**
    negative-grid, equivalent networks for, **1321**
    planar, e.s. field in, calculation of, **1277**, grounded-grid, 500-Mc/s, **3178**, penetration factor and field in, **3176**, Type-1553, design factors of, **510**
    u.h.f., planar grids for, design and manufacture of, **2594**
  triode and pentode, interelectrode impedances in, **2590**
    operating conditions of, **2663**
  tuning-indicator, Type EM71, **3160**
  u.h.f., vacuum and crystal, French types, **3165**
  v.m., based on electron-plasma oscillations, **2875**
    with deceleration and acceleration of beam, **2068**
    efficiency of oscillation generation in, **2802**
    high efficiency, **1036**
    pendular multiplication of secondary electrons in, **799**
    space charge and phase focusing in, **(D)3187**
Variometer, air-cooled, for mobile s.w. transmitter, **2299**
  magnetic, **1870**
  u.s.w., with ferrite cores, **1677**
Varistors, characteristics and applications of, **2363**
Vector diagrams, for circuit frequency response, **1578**
Vibrations, sonic and ultrasonic, applications in biology, biochemistry and biophysics, bibliography of, **1813**
Voltage, direct, small, compensation and measurement of, **2760**, measurement of, **(A)2122**
  h.f., measurement methods for, **2761**
Voltmeters, a.c., differential, electronic, **689**
    expanded-scale, **160**
  e.s., using liquid dielectric, **947**
  high-impedance, photocells in, **401**
  square-law, rectifier-bridge type, **3052**
  thermocouple, for millivolt measurements at r.f., **161**
  valve, a.f., 1 mV–10 V, **2482**
    audion, **1988**
    negative-feedback, **2767**
    peak, instantaneous, **2481**
    for students' use, **400**
  for 50 μV–1 kV and frequencies 1 kc/s–30 Mc/s, **1198**

  mechanism of F-layer-propagated back-scatter echoes, **2808**
  microwave, effect of ocean waves on, **(A)2799**
    experiments on, **202**
    low-level atmospheric conditions and over-water interference patterns, **(A)2799**
    between parallel conducting surfaces, **(A)2100**
    through parallel-plate arrays, **(A)2100**
  Mögel-Dellinger effect, phenomena connected with, **1477**
  m.w., change at sunset in, **2809**
  over plane earth, analysis by saddle-point method, **2466**
  polarization of Z trace in northern Canada, **3090**
  and positions of planets, **1997**
  ray path in curved ionosphere layer, **1296**
  reception in Switzerland of WWV standard-frequency transmissions, **1178**
  reflection, from F_2 layer, anomalous variations of, **2526, 2527**
    in inhomogeneous medium, **2157**
    from ionosphere, and ground-wave scattering, **976**, of long waves, **(A)2799**, polarization of l.f. waves, **(A)2799**
  and refractive index of ionosphere, **3094**
  reliability of ray theory of, **2521**
  round-the-world signals, **726**
  Sommerfeld's radiation principle, [illegible]
  Sommerfeld's surface wave, **429**
    comparison of theories on, **2516**
    proof of nonexistence of, **2517**
  in stratified media, **857, 1340, 2157**
    theory of, **3089**
  s.w., fading due to interference between magneto-ionic components, **2815**
    ionospheric, effect of geomagnetic field on, **(A)2805**
    m.u.f. predictions, **1996, 2812**
    variation of velocity of, **2803**
  tropospheric, mathematical theory of, **(A)2799**
    scattering in, **2811**, theory of, **787**
    at 44·1 and 92·1 Mc/s over 167-mile path, **977, (A)1287**
    250–3000-Mc/s, between aircraft, **(A)2799**

  u.h.f., beyond horizon, **436**
  u.s.w., influence of troposphere on, **2524**
  v.h.f., effect of terrain on field strength, **(A)2799**
    experiments to determine factors in, **(A)2799**
  field strength measurements on plane and circularly polarized waves, **(A)2799**
  very short wave, meteorological aspects of, **1998**
  wave packets, Poynting vector and energy flow, **1881**, **2696**, **2697**
  work of the Australian Radio Research Board on, **1999**
  at 5–30-Mc/s, determination of skip distance and m.u.f. using long-distance back-scatter, **(A)2799**
  at 8–17 Mc/s, between Noumea and Adélie Land, **1231**
  at 28–148 Mc/s, anomalies during auroral displays, **2002**, **(A)2799**
  at 92·9-Mc/s, over 127-mile path, **(A)2799**
  at 0·3–10 kMc/s, **435**
  in 6-m band, effect of magnetic storms on, **(A)2799**, **2807**
Waveguides, acoustic, **1290**
  applicability of transmission-line theory to, **2639**
  application of quadripole theory to, **814**
  channel-separating filter arrangements for, **2104**
  circular, low-loss transmission in, **(A)2100**
    multimode, dominant transmission characteristics of, **(A)2100**
    open-ended, asymmetrical waves from, **2336**, diffraction effects with, **2337**
    probe measurements of mode conversion in, **(A)2100**
    properties of longitudinal slots in, **2105**
    wide-band quarter-wave plate for, **(A)2100**
  corrugated, as band-pass filters, **2912**
  dielectric-filled, in axial magnetic field, propagation in, **2911**
  effect of diaphragm on e.m. field in, **564**
  e.m. waves in, **565**
    stability and attenuation of, **813**
  equivalent circuits for, determination of parameters of, **(A)2100**
  field in, expansion in terms of normal modes, **1302**
    produced by currents and discontinuities, **2638**
  gas-filled, slow e.m. waves in, **1303**
  magic Tee, measurement of dielectric properties by, **3068**
  manufacturing methods for, **2913**
  metal, with parallelogram cross-section, **2910**
  multilayer, velocity of H_{0n} waves in, **2640**
  oscillations in, excitation by linear aerial, **2335**
  rectangular, with apertures, transmission in, **2102**
    radiation of dipole in, **816**
    two-dielectric, cut-off frequency for, **1841**
  resonant window for, design for high power, **566**
  slotted, as aerials, **815**
  switches for, **(A)2100**
  symmetrical, junctions in, analysis of, **2101**
  with two concentric dielectrics, propagation in, **1564**
Wavemeters, absorption, grid-dip, **2769**
Waves, (See also Diffraction; Sound)
  e.m., cm-λ, ponderomotive effects of, **681**
    elliptically polarized, **(D)1074**, complex-vector algebra of, **2419**, geometrical representation of, **2418**, synthesis and analysis of, **2416**, transmission and reception of, **(C)285**
    ionospheric, polarization of, **1464**
    microwave, generation by diffraction, **1354**
    in moving plasma, **717**
    plane, reflection by infinite set of plates, **1352**
    reflection by metal-plate structures, measurement of, **1880**
    reflection and refraction at set of parallel metal plates, **1138**
    reflection and transmission, by metal-plate structures, **1879**, by metal-plate structures and dielectric plates, **1878**, by thin curved shells, **93**
    r.f., effect of refractive index of ionized gas on emission and absorption of, **334**
    scattering of, **1762**, by ionized gases, **96**, by 'soft' spherical obstacles, **2189**, by spheres of size comparable with λ, **2417**
    submillimetre, production of, **(A)2122**
    surface, (See also Transmission lines, surface-wave) and application to transmission lines, **281**, **812**, **(D)2098**, determination of amplitude, **(A)2100**, interaction between transmission lines, **(A)2100**, along plane conductor, **2097**
    velocity determination by resonant-cavity method, **430**, **1225**
    vertically-polarized, phase velocity over surface of sphere, **(A)2799**
  linear, conservative, energy propagation in, **1621**
  magneto-hydrodynamic, in ionized gas, **2152**
    shock, theory of, **605**
  ultrasonic, radiation pressure in, **798**
    transmission and reflection by metal plate in water, **(A)524**
Wiring system, colour-coded, **2378**
Wobbulator, for simple c.r.o., design of, **412**

X

X-ray applications, examination of valves, **2506**
  liquid-level gauge, **(A)2245**
——**tubes**, cathode centering by minimum-capacitance method, **2597**
  fine-focus, e.s. focusing in, **1450**
  glass selection and production techniques for, **2214**
  image intensifiers for, **2507**
  resonant-cavity, 1-MV, **708**

ERRATA

In "Abstracts and References" throughout the year

Abstract No. 241 For 'See 275' read 'See 256'.
„ „ 280 For 'E. R. Schatz' read 'E. R. Schatz & E. M. Williams'.
„ „ 294 For 'J. B. Woodford' read 'J. B. Woodford, Jr'
„ „ 389 For 'Opérationel' read 'Opérationnel'.
„ „ 560 Change U.D.C. to 534.232 : 621.315.612.4.
„ „ 565 For 'See 1851 of 1950' read 'See 1861 of 1950'.
„ „ 879 Journal reference should read *Arch. Met. Geophys. Bioklimatol. A.*
„ „ 889 Journal reference should read *Arch. Met. Geophys. Bioklimatol. A.*
„ „ 1329 For '665·3' read '655.3'.
„ „ 1501 For 'G. S. Szegho' read 'C. S. Szegho'.
„ „ 1820 In line 6 for 'one' read 'tone'.
„ „ 2271 In title, for 'Adaptation' read 'Matching'.
„ „ 2352 Title should read "Aerials for Beam Stations".
„ „ 2596 In title, for 'A Note of' read 'A Note on'.
„ „ 2798 For 'Vol. 15' read 'Vol. 14'.
„ „ 2819 For 'Vol. 15' read 'Vol. 14'.
„ „ 2827 In title, for 'Adaptation' read 'Matching'.
„ „ 3172 In title, for 'log I f(F)' read 'log I = $f(\sqrt{F})$'.

U.D.C. Changes

Crystal counters 621.387.462†
Fluxmeters 621.317.444†
Geiger-Müller counters 621.387.424†
Gyrointeraction 621.317.353.3† : 621.396.11
Measurement of capacitance 621.317.335.2†
Measurement of permeability 621.317.411†
„ „ *Q* 621.317.337†
Proportional counters 621.387.422†
Radiation counters 621.387.4†
Scintillation counters 621.387.464†
Thermistors 537.312.6 : 621.315.592†

LIST OF JOURNALS

A selection of the journals which are regularly scanned is given below, together with the addresses of publishers or editorial offices and the abbreviations of titles as used in the Abstracts and References. Applications for copies of any journal should be made to the addresses given.

The full title of each journal is given first and is followed by the address, the abbreviated title being shown within parenthéses. In a few cases the nature of a journal is indicated, where neither the title nor the address shows it clearly.

A

Acta Polytechnica, Royal Swedish Academy of Engineering Sciences, Stockholm, Sweden. (*Acta polyt., Stockholm*)
Acta physica austriaca, Springer Verlag, Wien I, Mölkerbastei 5, Austria. (*Acta phys. austriaca*)
Alta Frequenza, Associazione Elettrotecnica Italiana, Milano (202), Via S. Paolo 10, Italy. (*Alta Frequenza*)
Analytical Chemistry, American Chemical Society, 1155 Sixteenth Street NW, Washington 6, D.C., U.S.A. (*Anal. Chem.*)
Annalen der Physik, J. A. Barth, Leipzig C1, Salomonstrasse 18B, Germany. (*Ann. Phys., Lpz.*)
Annales de Physique, Masson & Cie, 120 Boulevard Saint-Germain, Paris 6ᵉ, France. (*Ann. Phys., Paris*)
Annales de Radioélectricité, 10 Rue Carducci, Paris 19ᵉ, France. (*Ann. Radioélect.*)
Annales des Télécommunications, 3 & 5 Boulevard Pasteur, Paris 15ᵉ, France. (*Ann. Télécommun.*)
Annali di Geofisica, Istituto Nazionale di Geofisica, Citta universitaria, Rome, Italy. (*Ann. Geofis.*)
Applied Scientific Research, Martinus Nijhoff, The Hague, Holland. (*Appl. sci. Res.*)
Archiv der elektrischen Übertragung, Wiesbaden-Biebrich, Mühlweg 2, Germany. (*Arch. elekt. Übertragung*)
Archiv für Elektrotechnik, Springer Verlag, Berlin-Charlottenburg 2, Jebensstrasse 1, and Heidelberg, Neuenheimer Landstrasse 24, Germany. (*Arch. Elektrotech.*)
Archiv für Meteorologie, Geophysik und Bioklimatologie, Series A, Springer Verlag, Wien I, Mölkerbastei 5, Austria. (*Arch. Met. Geophys. Bioklimatol. A*)
Archiv für technisches Messen, R. Oldenbourg Verlag, München, Lotzbeckstrasse 2b, Germany. (*Arch. tech. Messen*)
Arkiv för Fysik, published for Royal Swedish Academy of Sciences by Almqvist & Wiksells Boktryckeri A.B., Stockholm, Sweden. (*Ark. Fys.*)
A.S.T.M. Bulletin, 20th and Northampton Streets, Easton, Pa., U.S.A. (*A.S.T.M. Bull.*)
Audio Engineering, Radio Magazines Inc., 10 McGovern Avenue, Lancaster, Pa., U.S.A. (*Audio Engng*)
Australian Journal of Applied Science, Commonwealth Scientific and Industrial Research Organization, 314 Albert Street, East Melbourne C2, Australia. (*Aust. J. appl. Sci.*)
Australian Journal of Instrument Technology, 414 Collins Street, Melbourne, Australia. (*Aust. J. Instrum. Tech.*)
Australian Journal of Scientific Research, Series A, 314 Albert Street, East Melbourne C2, Australia. (*Aust. J. sci. Res., Ser. A*)
A.W.A. Technical Review, Amalgamated Wireless (Australasia) Ltd, Sydney, Australia. (*A.W.A. tech. Rev.*)

B

B.B.C. Quarterly, British Broadcasting Corporation, 85 Marylebone High Street, London, W.1, England. (*B.B.C. Quart.*)
Beama Journal, British Electrical and Allied Manufacturers' Association 36 Kingsway, London, W.C.2, England. (*Beama J.*)
Bell Laboratories Record, 463 West Street, New York 14, N.Y., U.S.A. (*Bell Lab. Rec.*)
Bell System Technical Journal, American Telephone and Telegraph Company, 195 Broadway, New York 7, N.Y., U.S.A. (*Bell Syst. tech. J.*)
British Journal of Applied Physics, 47 Belgrave Square, London, S.W.1, England. (*Brit. J. appl. Phys.*)
Brown Boveri Review, Artillery Mansions, 75 Victoria Street, London, S.W.1, England. (*Brown Boveri Rev.*)
Bulletin de l'Académie des Sciences de l'U.R.S.S., (*a*) série physique, (*b*) série géographique et géophysique, (*c*) classe sciences techniques, Academy of Sciences, Moscow, U.S.S.R. (In Russian.) (*Bull. Acad. Sci. U.R.S.S.*, (*a*) *sér. phys.*, (*b*) *sér. géogr. géophys.*, (*c*) *tech. Sci.*)
Bulletin of the American Meteorological Society, Executive Secretary, 3 Joy Street, Boston 8, Mass., U.S.A. (*Bull. Amer. met. Soc.*)
Bulletin de l'Association suisse des Électriciens, 301 Seefeldstrasse, Zürich 8, Switzerland. (*Bull. schweiz. elektrotech. Ver.*)
Bulletin de la Société française des Électriciens, 8–14 Avenue Pierre Larousse, Malakoff (Seine), France. (*Bull. Soc. franç. Élect.*)
Bulletin technique de la Suisse romande, F. Rouge & Cie, Lausanne, Switzerland. (*Bull. tech. Suisse romande*)

C

Câbles & Transmission, Sotelec, 16 Rue de la Baume, Paris 8ᵉ, France. (*Câbles & Transmission, Paris*)
Canadian Journal of Physics, National Research Council, Ottawa, Canada. (*Canad. J. Phys.*)
Chalmers tekniska Högskolas Handlingar, N. J. Gumperts Bokhandel, Göteborg, Sweden. (*Chalmers tekn. Högsk. Handl.*)
Communication News, Philips Telecommunication Industries, Hilversum, Holland. (*Commun. News*)
Communications on Pure and Applied Mathematics, Interscience Publishers Inc., 250 Fifth Avenue, New York 1, N.Y., U.S.A. (*Commun. pure appl. Math.*)
Comptes Rendus Hebdomadaires des Séances de l'Académie des Sciences, Gauthier-Villars, Quai des Grands Augustins 55, Paris, France. (*C. R. Acad. Sci., Paris*)
Comptes Rendus (Doklady) de l'Académie des Sciences de l'U.R.S.S., Academy of Sciences, Moscow, U.S.S.R. (In Russian.) (*C. R. Acad. Sci. U.R.S.S.*)

D

Distribution of Electricity, 95 Aldwych, London, W.C.2, England. (*Distrib. Elect.*)

E

Electrical Communication, International Telephone and Telegraph Corporation, 67 Broad Street, New York 4, N.Y., U.S.A. (*Elect. Commun.*)
Electrical Engineering, Journal of the American Institute of Electrical Engineers, 500 Fifth Avenue, New York 18, N.Y., U.S.A. (*Elect. Engng, N.Y.*)
Electrical Manufacturing, 1250 Sixth Avenue, New York 20, N.Y., U.S.A. (*Elect. Mfg, N.Y.*)
Electrical Times, Sardinia House, Sardinia Street, London, W.C.2, England. (*Elect. Times*)
Electrician, Bouverie House, 154 Fleet Street, London, E.C.4, England. (*Electrician*)
Electronic Engineering, 28 Essex Street, London, W.C.2, England. (*Electronic Engng*)
Electronics, 99–129 North Broadway, Albany 1, N.Y., U.S.A. (*Electronics*)
Elektrotechnik, Berlin, N.W.7, Clara-Zetkinstrasse 41, Germany. (*Elektrotechnik, Berlin*)
Elektrotechnik und Maschinenbau, Journal of the Elektrotechnischer Verein Österreichs, Springer Verlag, Wien I, Mölkerbastei 5, Austria. (*Elektrotech. u. Maschinenb.*)
Elektrotechnische Zeitschrift, Westermann Verlag, Braunschweig, Riddagshäuser Weg 66, Germany. (*Elektrotech. Z.*)
Endeavour, Imperial Chemical Industries, Nobel House, Buckingham Gate, London, S.W.1, England. (*Endeavour*)
Engineer, 28 Essex Street, London, W.C.2, England. (*Engineer, Lond.*)
Engineering, 35 & 36 Bedford Street, London, W.C.2, England. (*Engineering, Lond.*)
Ericsson Review, Stockholm 32, Sweden. (*Ericsson Rev.*)

F

Fernmeldetechnische Zeitschrift, Vieweg & Sohn, Braunschweig, Burgplatz 1, Germany. (*Fernmeldetech. Z.*)
FM-TV, 264 Main Street, Great Barrington, Mass., U.S.A. (*FM-TV*)
Frequenz, Schiele & Schön, Berlin, S.W.29, Boppstrasse 10, Germany. (*Frequenz*)
Funk und Ton, Verlag für Radio-Foto-Kinotechnik G.m.b.H., Berlin-Borsigwalde, Eichborndamm 141–167, Germany. (*Funk u. Ton*)

G

G.E.C. Journal, General Electric Company, Magnet House, Kingsway, London, W.C.2, England. (*G.E.C. J.*)
General Electric Review, General Electric Company, 1 River Road, Schenectady 5, N.Y., U.S.A. (*Gen. elect. Rev.*)
General Radio Experimenter, General Radio Company, 275 Massachusetts Avenue, Cambridge 39, Mass., U.S.A. (*Gen. Radio Exp.*)

H

Helvetica Physica Acta, Journal of the Société suisse de Physique, Éditions Birkhäuser, Bâle, Switzerland. (*Helv. phys. Acta*)
HF, 55 Rue Defacqz, Brussels, Belgium. (*H.F, Brussels*)

I

Indian Journal of Physics, (and Proceedings of the Indian Association forthe Cultivation of Science), 210 Bowbazer Street, Calcutta, India. (*Indian J. Phys.*)

Industrial and Engineering Chemistry, American Chemical Society, 1155 Sixteenth Street NW, Washington 6, D.C., U.S.A. (*Industr. Engng Chem.*)

J

Journal of the Acoustical Society of America, American Institute of Physics, 57 East 55th Street, New York 22, N.Y., U.S.A. (*J. acoust. Soc. Amer.*)

Journal of Applied Physics, American Institute of Physics, 57 East 55th Street, New York 22, N.Y., U.S.A. (*J. appl. Phys.*)

Journal of Atmospheric and Terrestrial Physics, Butterworth-Springer Ltd, 4–6 Bell Yard, London, W.C.2, England. (*J. atmos. terr. Phys.*)

Journal of the British Institution of Radio Engineers, 9 Bedford Square, London, W.C.1, England. (*J. Brit. Instn Radio Engrs*)

Journal of the Franklin Institute, Prince and Lemon Streets, Lancaster, Pa, U.S.A. (*J. Franklin Inst.*)

Journal of Geophysical Research, Johns Hopkins Press, Baltimore 18, Maryland, U.S.A. (*J. geophys. Res.*)

Journal of the Institution of Engineers, Australia, Science House, Gloucester & Essex Streets, Sydney, Australia. (*J. Instn Engrs, Aust.*)

Journal of Mathematics and Physics, Massachusetts Institute of Technology, Cambridge 39, Mass., U.S.A. (*J. Math. Phys.*)

Journal of Metals, American Institute of Mining and Metallurgical Engineers Inc., 29 West 39th Street, New York 18, N.Y., U.S.A. (*J. Metals*)

Journal of the Optical Society of America, American Institute of Physics, 57 East 55th Street, New York 22, N.Y., U.S.A. (*J. opt. Soc. Amer.*)

Journal de Physique et le Radium, 12 Place Henri-Bergson, Paris 8^e France. (*J. Phys. Radium*)

Journal of Research of the National Bureau of Standards, U.S. Government Printing Office, Washington, D.C., U.S.A. (*Bur. Stand. J. Res.*)

Journal of Scientific Instruments, 47 Belgrave Square, London, S.W.1, England. (*J. sci. Instrum.*)

Journal of the Society of Glass Technology, Secretary, J. H. Partridge, Elmfield, Northumberland Road, Sheffield 10, England. (*J. Soc. Glass Tech.*)

Journal of the Society of Motion Picture and Television Engineers, 342 Madison Avenue, New York 17, N.Y., U.S.A. (*J. Soc. Mot. Pict. Televis. Engrs*)

Journal of the Television Society, G. Parr (Ed.), 68 Compton Road, London, N.21, England. (*J. Televis. Soc.*)

M

Marconi Review, Marconi House, Chelmsford, England. (*Marconi Rev.*)

Materials and Methods, Reinhold Publishing Corporation, 330 West 42nd Street, New York 18, N.Y., U.S.A. (*Materials & Methods*)

Metal Industry, Louis Cassier Company Ltd, Dorset House, Stamford Street, London, S.E.1, England. (*Metal Ind., Lond.*)

Metal Progress, American Society for Metals, 7301 Euclid Avenue, Cleveland 3, Ohio, U.S.A. (*Metal Progress*)

Metal Treatment, 49 Wellington Street, London, W.C.2, England. (*Metal Treatm.*)

Metallurgia, Kennedy Press Ltd, 21 Bedford Street, London, W.C.2, England. (*Metallurgia, Manchr*)

Meteorological Magazine, His Majesty's Stationery Office, York House, Kingsway, London, W.C.2, England. (*Met. Mag.*)

Microtecnic, Lausanne, Switzerland. (*Microtecnic, Lausanne*)

Modern Plastics, 122 East 42nd Street, New York 17, N.Y., U.S.A. (*Mod. Plast.*)

Monthly Notices of the Royal Astronomical Society, Burlington House, London, W.1, England. (*Mon. Not. R. astr. Soc.*)

Section VII—1952

Index to

Abstracts and References

This section contains an index, listed separately by author and by subject, for all Abstracts and References published in PROCEEDINGS OF THE IRE from February, 1952, through January, 1953.

AUTHOR INDEX

AUTHOR INDEX—A name followed by "and" is that of the first author of a jointly written paper, while the word "with" indicates that the name indexed is that of the second author.

A

Abbey, R. L., velocity of sound in gases at low pressures, **2691**
Abbott, F. R., design of buried-conductor r.f. ground system, **2729**
Abe, Z., with Y. Watanabe, s.w. narrow-band-pass crystal filters, **354**
Abel, W. G., and L. C. Edwards, source of long-distance back-scatter, **1062**
Aberdam, H., photography of oscillograms and television images, **1647**
Abgrall, C., and I. Epelboin, temperature variations of thin mumetal tapes in weak alternating fields, **2529**
Abild, B., abnormal u.s.w. ranges and their meteorological causes, **2580**
—— and others, u.s.w. propagation and meteorological influences, **3217**
Absalom, H. W. L., General Assembly of International Union of Geodesy and Geophysics, Brussels, 1951, **1598**
Abson, W., with D. Taylor, radiation-measurement instruments for X rays to cosmic rays, **1989**
Accardo, C. A., with others, 'injected' light emission from SiC crystals, **154**
Ackerman, S. L., with J. B. Wynn, Jr, guided-missile test-centre telemetry system, **1990**
Acton, J. R., single-pulse dekatron, **1787**
Adam, M., telecommunications, radio navigation and electronics at 19th Salon international de l'Aéronautique, Paris, 1951, **2097**; French regulations for protection of broadcasting against interference of industrial origin, **3223**
Adams, G. K., repetitive spark source for shadow and schlieren photography, **1888**
Aden, A. L., and M. Kerker, scattering of e.m. waves from two concentric spheres, **1259**
Adler, R., miniature travelling-wave valve, **866**
Adler, R. B., e.m. waves on inhomogeneous cylindrical structures, **1831**
Admiraal, D. J. H., RC oscillators, **1870**
Adorian, P., and A. H. Dickinson, h.f. broadcasting with vertical radiation, **2335**
Adrianiva, I. I., and I. L. Sokol'skaya, rectifying properties of PbS, **1343**
Agdur, B. N., double-stream amplifier valve, **1154**
—— and C. G. L. Åsdal, noise measurements on travelling-wave valve, **1152**
Agostinelli, C., epicycloidal functions and new relations between Bessel's functions, **1944**
Ahearn, A. J., effect of inhomogeneities on electrical properties of diamond, **1640**
Ahmed, R., linear analysis of electronic switching, **930**
Aida, Y., with Y. Nomura, radiation impedance of rectangular plate with infinite baffle, **301**
Aigrain, P., superdirective aerials, **2120**; rectification phenomena and transistor action in Ge, **2234**
—— and others, semiconducting properties of Te, **3450**
—— with others, semiconducting properties of molybdenite, **3454**
Ainlay, A., with others, saturable reactors as r.f. tuning elements, **3394**
Ajioka, J. S., with O. C. Haycock, radiation characteristics of helical aerials, **2995**
Aka, E. Z., with M. E. Straumanis, lattice parameters, expansion coefficients, and atomic weights of purest Si and Ge, **2541**
Akeley, E., with D. Caplan, axial motion of electron in linear accelerator, **3518**
Akhiezer, A. I., and Ya. B. Faynberg, slow e.m. waves, **1829**; h.f. oscillations in electron plasma, **3411**
—— and G. Ya. Lyubarski, nonlinear theory of oscillations in electron plasma, **3063**
Akulov, N. S., and G. S. Krinchik, eddy currents due to displacement of domain boundaries, **3115**
Albersheim, W. J., measurement techniques for wide-band long-distance radio relay systems, **2551**
—— and J. P. Schafer, echo distortion in f.m. transmission of frequency-division multiplex, **2022**
—— with L. F. Hunt, c.r.o. scanner for measurement of delay distortion, **2286**
Albert, V. F., with C. S. McGinnis, multiple Helmholtz resonators, **3311**
Alden, E. D., with L. R. Koller, electron penetration and scattering in phosphors, **152**
Aleksandrov, N. V., measurement of properties of highly absorbing dielectrics, **1370**
Alers, P. B., and R. T. Webber, anomalous magnetoresistance of Bi at low temperatures, **1629**
Alexander, B., long-range-navigation instrumentation, **1925**
Alexander, W., electrical resonance, **3367**
Alexander, W. H., judgment box, **217**
Alf, F., measurement of power of h.f. generators, **1035**
Alixant, M., bibliography of magnetic recording, **24**; new radio components in world market, **628, 2673**; ultrasonic generators and applications, **1182**
Allard, L. S., design and operation of television c.r. tubes, **842**
Allart, G., with M. Langevin, 10-channel pulse-amplitude analyser, **2130**
Allee, G. L., with L. T. Sachtleben, ultra-speed theatre-television projection systems, **1453**
—— with others, image-orthicon colour-television camera optical system, **2907**
Allen, D. N. de G., and S. C. R. Dennis, relaxation methods in solution of boundary-value potential problems, **1354**
Allen, J. E., distribution of electron energies in high-current discharge, **100**
Allen, W. A., and P. H. Parkin, acoustics and sound exclusion, **13**
Allred, C. M., abac for TE_{11}-mode piston attenuator, **2467**
Almond, M., summer daytime meteor streams of 1949 and 1950, **387**
—— J. G. Davies and A. C. B. Lovell, velocity distribution of sporadic meteors, **1899**
Alons, L., developments in the gramophone world, **1507**
Al'pert, Ya. L., and A. A. Aynberg, effects of ionosphere irregularities, **130**
Alsberg, D. A., sweep-frequency method of vector-impedance measurement, **728**
Altenburg, K., analogy between corpuscular theory of sound propagation in fluids and theory of quadripoles, **1491**
Aly, M. K., Khartoum expeditions for solar eclipse Feb. 1952, **2787**
Amos, B., and W. Heiser, internal television-receiver interference, **1143**
Amos, S. W., and G. G. Johnstone, sensitive tuned-r.f. receiver, **1092**
Amster, L., with others, C.S.F. television transmitters, **3576**
An Wang. See Wang, An.
Ananthakrishnan, R., solar prominences and sunspot cycle, **3422**
Anderson, D. V., reflection of acoustic pulse by paraboloid, **2683**
—— T. D. Northwood and C. Barnes, reflection of pulse by spherical surface, **2682**
Anderson, F. B., seven-league oscillator, **81**, **(C)1869**
Anderson, G. M., and E. M. Williams, transient response of asymmetrical carrier systems, **493**
Anderson, L. J., and J. R. Johnson, light-weight pickup and tone arm, **888**
Anderson, S. R., with others, Civil Aeronautics Administration v.h.f. omnirange aid, **1000**, **(C)2814**
Anderson, W. N., with W. D. Richardson, cross-channel television, **821**
Andrejewski, W., diffraction of plane e.m. waves by circular disk or aperture, **868**
Andrieu, R., line-scan circuit with economy transformer, **3580**
Andrieux, —, and — Dayonnet, equipment for comparison of nearly equal frequencies, **1979**
Angel, Y., and P. Riche, Paris-Lille television radio link, **2627**
Angelakos, D. J., current and charge distributions on aerials and open-wire lines, **592**
Anner, G. E., Elements of Television Systems, **(B)1145**
Anspacher, W. B., pentode amplifier with positive feedback, **853**
Antes, L. L., and N. Hackerman, contact potential variations of freshly condensed metal films at low pressures, **[illegible]**
Apgar, E. G., with others, h.v. cold-cathode rectifier, **2927**
Appleby, J. S., with W. T. Bane, automatic control of electrical power, **3561**
Appleton, E. V., magnetic and ionospheric storms, **395**
—— and W. R. Piggott, statistics of storms in F_2 layer, **2802**
Ardillon, J. M., dependence of ionospheric disturbances on local time, **2795**
Argence, E., e.m. waves in ionosphere, paths in, **1063**, phase path of, **2315**
—— M. Mayot and K. Rawer, electron distribution in ionosphere and s.w. absorption, **1300**
—— with K. Rawer, characteristics of ionosphere E region, **1601**
—— with others, determination of collision frequencies in E and F regions, **[illegible]**
Arley, N., and K. R. Buch, Introduction to the Theory of Probability and Statistics, **(B)1361**
Armour, A. M., A. J. King and J. W. Walley, developments and simplifications in permeameters, **3499**
Armstrong, H. L., with J. V. Hughes, dielectric constant of dry air at 3 kMc/s, **3127**
Arnold, A. H. M., a.c. resistance of single-layer inductance coils, **609**; performance limits in electrical instruments, **1971**
Arnold, E., with others, u.s.w. propagation and meteorological influences, **3217**
Arnold, R., with J. van Calker, thermal conductivity of electrets, **3443**
Arnoult, R., with A. Lebrun, coaxial-line permittivity measurements at m and dm λ, **1956**
Arpiarian, N., inhibiting action of Fe on luminescence of ZnS, **421**
—— and D. Curie, electron levels in phosphors with Fe, Ni or Co poison centres, **2232**
Arthur, J. B., with E. H. Putley, PbS, an intrinsic semiconductor, **425**
von Arx, A., 31-MeV betatron installation at Zürich, **1994**
Arzeliès, H., matrix and tensor form of fundamental relations of magneto-ionic theory, **3416**
Asbury, W. D., K. M. B. Wright and W. M. Lloyd, first British multi-channel television receiver, **2915**
Aschen, R., television camera equipment, **520**
—— and P. Gaillard, simple ionosphere sounder, **1917**
Ascione, A., and C. Micheletta, radio propagation experiments at 33 Mc/s, **787**
Åsdal, C. G. L., with B. N. Agdur, noise measurements on travelling-wave valve, **1152**
Ashdown, G. L., and K. L. Selig, general-purpose differential analyser, **1649**
Aslakson, C. I., and O. O. Fickeissen, effect of meteorological conditions on shoran measurement of long distances, **1610**
Aspden, H., two-fluxmeter method of measuring hysteresis loss, **2274**; eddy currents in cores with nonuniform permeability, **3122**
Aspinall, A., and G. S. Hawkins, summer daytime meteor streams of 1949 and 1950, **385**
Assadourian, F., distortion of f.m. signal by small loss and phase variations, **2027**
Assmus, F., and F. Pfeifer, resistance anomalies in supermalloy, **691**
Astbury, N. F., geomagnetic variations during solar eclipse, 25th Feb. 1952, **3425**
Atanasijevic, I., radiation from Milky Way on 255 Mc/s, **3423**
—— with others, observations of solar eclipse, 25th Feb. 1952, **2785**
Atkinson, R. B., and S. G. Ellis, ferrography, **1705**
Atlee, R. Y., electronic protection systems, **218**
Atterling, H., and G. Lindström, cyclotron with 225-cm pole diameter, Stockholm, **2567**
Attew, J. E., decade-multivibrator design, **1557**
Attree, V. H., differential voltmeter using temperature-limited diode, **3501**; precision alternating-voltage source, **3505**
Auerbach, A. A., and others, Binac digital computer, **1356**
Augenblick, H., with W. Sichak, tunable waveguide filters, **353, 1834**
Austin, P. A., and A. C. Bemis, 'bright band' in radar precipitation echoes, **680**
Avery, D. G., optical constants of PbS and PbTe in range 0·5–3μ, **1938**
Axon, P. E., mechanism of magnetic-tape recording, **2427**
Ayer, R. B., Th-W filaments in high-power transmitting valves, **2660**
Ayers, E. W., with C. J. Cameron, Medresco hearing aid, **2111**
Aynberg, A. A., with Ya. L. Al'pert, effects of ionosphere irregularities, **130**
d'Azambuja, M., with others, observations of solar eclipse, 25th Feb. 1952, **2785**

B

Babcock, W. E., characteristics of a.m. detectors, **483**
Bache, H., and F. A. Benson, glow-discharge voltage-regulator tubes, peak-noise characteristics of, **2930**, mean-noise characteristics of, **2931**
Bachman, C. H., H. Eubank and G. Hall, hollow cathode for positive-ion studies in c.r. tubes, **1172**
Bachman, W. S., damping of gramophone pickup arms, **1813**
Badoyannis, G. M., with L. A. Rosenthal, r.m.s. valve voltmeter, **3502**
Baer, K. H., with others, radio common-wave system of the Südwestfunk, **2618**; Ravensburg 2×20-kW broadcasting transmitter, **2644**
Bagge, E., and J. Christiansen, parallel-plate self-quenching counter, **3525**
Baguley, E., and F. B. Cope, pulse-echo test set for quality control of coaxial cables, **2266**
Bähring, H., magnetic beam-deflection systems, **2352**
Bailey, D. K., and others new kind of v.h.f. radio propagation over long distances, **2581**
Bailey, V. A., relativistic theory of electro-magneto-ionic waves, **105**
—— and others, resonance in gyro-interaction of radio waves, **3214**
Bailey, W. F., with others, N.T.S.C. compatible colour television, **1750**
Bailin, L. L., effect of discontinuity in circular guide on plane acoustic waves, **1495**
—— with others, radiation characteristics of turnstile aerial shielded by tube, **2996**
Bailitis, E., with H. H. Rust, linear magnetostrictive ultrasonic generators using crossed magnetic fields, **3308**
Bain, W. C., and others, ionospheric propagation of 16-kc/s waves over distances of about 540 km, **2871**
—— with R. N. Bracewell, explanation of radio propagation at 16 kc/s, **2804**
Baker, E. B., automatic recording of dielectric-constant variation with temperature, **191**
Baldwin, M. W., Jr, subjective tests of sharpness of additive colour pictures, **330**
Baldwin, W. O., negative feedback, **3051**
Ballantyne, N. Z., circuits using balitron valve, **2388**
Ballard, D.C., with D. D. Van Ormer, effects of screen tolerances on operating characteristics of aperture-mask tricolour kinescopes, **852**
Baltensperger, W., theory of impurity centres in Si, **972**
Balz, G., automatic control of volume contrast, **940**
Bamford, A. B., combined television and radio receiver, **1090**
Banbury, P. C., double-surface PbS transistor, **2653**
Bane, W. T., and J. S. Appleby, automatic control of electrical power, **3561**
Banerjee, B. K., with others, vertical propagation of e.m. waves in ionosphere, **243**
Banerjee, B. M., study of switching in multivibrator, **931**
—— and R. Roy, timebase circuit for precision ionospheric recorder, **2477**
Banerjee, S. S., R. R. Mehrotra and V. D. Rajan, scattering of radio waves in ionosphere, **779**
Banks, B. D., applications of Muirhead-Pametrada wave analyser Type D-489 in aircraft-engine research, **3181**
Baños, A., Jr, D. S. Saxon and L. L. Bailin, radiation characteristics of turnstile aerial shielded by tube, **2996**
Banthorpe, C. H., single-valve line-scan and h.v. generator, **1137**
Barber, C. R., A. Gridley and J. A. Hall, design for standard resistance coils, **2452**
Barbier, J. C., after-effect constant over total hysteresis range, **2237**
Barbier, M., equilibrium between insulator emitting secondary electrons, a space charge, and constant-potential enclosure, **2364**
Barbiere, D., calculation of current distribution of Tchebycheff arrays, **1211**, **(C)3002**
Bardeen, J., with others, effects of pressure and temperature on resistance of Ge p-n junctions, **1328**
Barducci, I., artificial ear for calibrating telephone receivers, **306**
Bareiss, M., new damping diode, **551**
Barkow, P., wide-band f.m. directional links, asymmetry of frequency swing in, **267**, linearity limits of discriminators for, **2329**
Barlow, H. M., relative power-carrying capacity of h.f. waveguides, **1196**; input-impedance characteristics of anti-resonance h.f. transmission lines, **2430**
Barnes, B. E., and R. D. Faulkner, mechanical design of aperture-mask tricolour kinescopes, **851**
Barnes, C., with others, reflection of pulse by spherical surface, **2682**
Barnes, M. H., with R. M. Barrett, automatic microwave-aerial wave-front plotter, **1380**
Barone, A., concentration of ultrasonic energy, **3309**
Baroody, E. M., theory of secondary-electron emission from metals, **107**, Wooldridge's, **110, 3409**
Barré, M., and K. Rawer, ionospheric observations near Adélie Land, **399, 1293**
Barrère, G., Xe-filled G-M counters, **2003**
Barrett, R. E., and R. T. Beyer, anomaly in ultrasonic absorption of solutions, **1806**
Barrett, R. M., etched sheets for microwave components, **2705**
—— and M. H. Barnes, automatic microwave-aerial wave-front plotter, **1380**
Bartels, J., daily variations of geomagnetic field, **670**
—— and J. Veldkamp, international data on magnetic disturbances, first quarter 1951, **124**, second quarter 1951, **1286**, third quarter 1951, **2501**, fourth quarter 1951, **2792**
Barthel, R., and A. W. Nolle, recording ultrasonic interferometer and applications, **1807**
Barthélemy, R., television scanning tube, **1755**
Bartlett, S. C., with others, investigation of interference from h.v. lines, **257**
Bartley, W. P., and J. E. White, alterations of characteristics of oxide-cathode valves, **(A)3599**
Baruch, J. J., thyratron as close-differential relay, **929**
Basseras, —, detection of f.m. waves, **2590**
Bateman, R., with others, new kind of v.h.f. radio propagation over long distances, **2581**
Bates, D. R., temperature of upper atmosphere, **988**
—— and H. S. W. Massey, negative-ion concentration in lower ionosphere, **983**, **2796**
Bates, L. F., Modern Magnetism, **(B)1277**
—— and G. W. Wilson, new Bitter patterns on Ni single crystal, **701**
Batschelet, E., numerical solution of boundary-value problems by means of elliptic partial differential equations, **3153**
Battell, W. J., with others, counting system for nucleonics, **610**
Bauer, B. B., transformer analogues of diaphragms, **1488**
Bauermeister, E., and W. Knöpfel, u.s.w. field strength predictions for mountainous terrain, **2584**
Baumann, E., Fischer eidophor large-screen projection system, **2350**
Baumgartner, H., difference between dielectric constants of free and clamped KH_2PO_4 crystals, **1339**
Baumgartner, W., with N. Schaetti, Li-Sb photocathodes, **858**; properties of Cs-Sb photocathodes at different temperatures, **2070**
—— with others, photoelectric effect in Cs-Ga, Cs-In and Cs-Tl photocathodes, **2069**
Baur, F., with T. Einsele, frequency dependence of magnetic after-effect in powder cores, **1326**
Bauss, H., and R. F. Boyer, random noise in dielectrics, **3478**
Bayet, M., u.h.f. excitation of gases, **1887**
Bazzard, G. H., with others, propagation of m-λ waves beyond horizon, **242**
Beadle, D. G., with C. G. Mayo, portable tone source for acoustic measurements, **1382**; direct measurement of reverberation time, **1817**
—— with D. E. L. Shorter, portable microphone amplifier with miniature valves, **946**
—— with others, equipment for acoustic measurements, **1681**
Beale, E. S. L., and R. Stansfield, Standard-Sunbury engine indicator Mark 6, **754**
Beanland, C. P., and F. I. Rickaby, Marconi s.s.b. receivers, Types HR92 and HR93, **2878**
de Beauclair, W., complex-number calculator, **1355**
Beaumariage, D. C., with others, magnetic amplifiers, transient response of, **(A)926**, analysis of transients in, **2133**
Bebb, A. H., integrating galvanometer, **3176**
Bechmann, R., transformation of third- and fourth-order tensors, **710**; thickness-shear-mode resonators using circular bevelled plates, **2544**
—— and P. L. Parsons, piezoelectric properties of partially plated square crystals, **704**; mechanical strength of piezoelectric crystals, **3142**
Beck, F. J., J. S. Kouvelites and L. W. McKeehan, magnetostrictive vibration of prolate spheroids, **1929**
Becker, E. W., and W. Walcher, defects in mass spectrometer due to space charge and magnetic-field saturation, **2290**
Becker, G. E., and D. A. Caswell, operation of 6-MeV linear electron accelerator, **221**
Becker, J. A., electron-microscope study of adsorption of W on W and Ba on W, **1077**
Becker, R., separating networks with series-resonance circuits as blocking elements, **2463**
Becker, W., triple splitting in ionosphere, **672**
—— and W. Dieminger, recombination coefficient of F_2 layer during Mögel-Dellinger effect, 19th Nov. 1949, **1295**
Bederson, B., and M. Silver, nonelectronic rectangular-wave generator, **2479**
Bedford, L., television camera tubes, **(D)522**
Béguin, C., pulse location of line irregularities, **1366**
Behling, H., calculation of limiting effect of ratio detector, **485**; design of wide-band amplifiers, **948**; sensitivity of dm-λ and cm-λ receivers using diode mixers, **1719**
Behr, A., and H. Siedentopf, review of solar observations, **2209**
Behr, K., and H. Norrby, portable field radio equipment SUF-21K, **2898**
Behrend, P., and K. Scheuermann, practical realization of positive reactance functions, **1366**
v. Békésy, G., d.c. potentials and energy balance of cochlear partition, **307**
Belevitch, V., Tchebycheff filters and amplifier networks, **1541**; synthesis of 2n-pole passive networks with prescribed distribution matrix, **1547**; theory of cut-off (Cowan) modulator with capacitor shunt, **2363**
Bell, D. A., balanced RC oscillator, 0·1–20 c/s, **82**; dual circuit of feedback amplifier, **1564**; ionospheric interaction in disturbed conditions, **2011**; effect of feedback on amplifier frequency response, **2482**, **(D)3386**
Bell, J., some aspects of electrical computing, **235**
Bell, J. F. W., admittance bridge for piezoelectric crystals, **1675**
Bell, R. L., induced grid noise and noise factor, **559**
Bellman, R., approximate expressions for exponential integral and error function, **2252**
Beson, A. E., with others, association of absorption and E_s ionization with aurora at high latitudes, **2511**
Belyaev, I. N., and others, dielectric properties of TiO_2, **1345**
Bemis, A. C., with P. A. Austin, 'bright band' in radar precipitation echoes, **680**
Benda, H., conductivity of CdS crystals irradiated by medium-energy electron beams, **1628**
Bengtson, L., with others, integrating amplifier for c.r.o. recording of magnetic flux, **2276**
Benham, T. A., ultrasonic wave analyser, **1962**
Benjamin, F., improvements in materials extend magnetic-amplifier applications, **2732**
Bennett, R. R., and A. S. Fulton, generation and measurement of low-frequency random noise, **1030**

Zelkin, E. G., waves in a pyramidal horn, 2727
Zepler, E. E., network theorem, 1535
Zerbel, W., German carrier-frequency system V60, 259
Zernov, N. V., diffraction of cylindrical e.m. waves, 2771
Zetrouer, W. F., and W. J. Kessler, similarity of atmospherics waveforms, 678
Zhabotinski, M. E., coaxial resonators loaded by capacitance, 358
[illegible], L. V., and A. N. Efremov, effect of reactance in λ/4 Lecher system on permittivity measurements, 3491
van der Ziel, A., noise suppression in triode amplifiers, 1876; direct-reading instrument for valve noise, 1967
—— with A. J. Dekker, theory of production of secondary electrons in solids, 3069
—— with G. B. Herzog, shot noise in Ge single crystals, 1936
Zimmermann, H., i.f. amplifier and signal build up in television receivers, 2062
Zinke, O., transmission parameters for lines, waveguides and free space, 31; distribution of radiation resistance along rod aerial, 583; h.f. current measurement, 1040; current and voltage distribution along rotationally symmetrical aerials, 2437
—— with H. H. Emschermann, capacitance measurement at h.f., 1081
Zinn, M. K., network representation of transcendental impedance functions, 2139
Zisler, S., plane aerials of small width, 584; influence of plane reflector on input impedance of thick cylinder, 587
Zoller, W., design of Resorbit arresters, 815
Zuhrt, H., theory of dipole aerials, (D)920

SUBJECT INDEX

SYMBOLS (A) Abstract, (B) Book Review, (C) Note of Correction, (D) Discussion

A

Abacs, (See also Charts)
  for attenuation of TM_{11} mode in square waveguide, 1836
  for dielectric constant and absorption at cm λ, 1367
  for TE_{11}-mode piston attenuator, 2467
  for temperature-compensation capacitors in parallel, 345
Absorption, (See also Acoustics; Ionosphere)
  acoustic, in gases and liquids, general theory of, 3315
    by materials, with perforated facings, 311, 2697, theory of, 1818
    by perforated sheets, experimental investigation of, 2696
    by porous material 'betamianto', 12
  acoustic and ultrasonic, in gases, 1497
  at cm λ, abac for, 1367
  coefficient, acoustic, of fir plywood panels, 310, of hallonit, 2420, measurement by free-field method, 309
  infrared, of amorphous Se, 3128
  ionospheric, analysis of variations of, 3538
    comparison of results at Slough and Freiburg, 984
    in D and E layers, 985
    at high latitudes, association with aurora, 2511
    and in solar corona, effect of electron collisions on, 2798
    s.w., and electron distribution, 1300
  microwave, by opalescent binary liquid mixtures, 2492
    reduction of Doppler line broadening, 2207
  ultrasonic, in electrolytes, anomalous effect in, 1806
    in gases and liquids, 1504
Accelerometers, piezoelectric, $BaTiO_3$-ceramic, 747, 748
    reciprocity calibration of, 3516
Acoustics, (See also Absorption; Broadcasting studios; Impedance; Sound; Ultrasonics)
  of ancient theatres, 565
  artificial ear, for calibration of telephone receivers, 306
    comparison between various types and human ear, 1814
  bibliography, 293, 1487, 1797, 2406, 2675, 3298
  of broadcasting studios, effect of sound-diffusing walls, 569
    Maida Vale, London, 1508
    pulse equipment for measurement of, 1681
    recent progress in, 3316
    standing-wave patterns in, 2975
    use of Helmholtz resonators as sound absorbers, 2424
  of buildings, radiation problems in, 2972
  design and analysis of subjective measurements in, 2968
  detector of transients and applications in study of music and speech signals, 2417
  effect of reflections on sound pattern of studio microphones, 3323
  of halls, influence of chandeliers on, 1190
    reflection effects in, 2974
  of organs, 886
  radiation impedance of rectangular plate with infinite baffle, 301
  of recording studios, 568
  of rectangular room, effect of sound-source harmonics on, 3319
  of remodelled Chambers at the Capitol, Washington, 2421
  reverberation times, in baroque churches, 3321
    direct measurement of, 1817
    of 10 British concert halls, 3320
  of rooms, correlation coefficient as criterion of, 2973
    effect of various diffuser elements on, 14
    and quality of reproduction, 2694
    and reverberation-radius concept, 1188
    from viewpoint of singer and speaker, 2103
  of Royal Festival Hall, London, 13, 567
  standing waves, demonstration of, 1489
  of theatres, investigations in Budapest, 2104
    use of artificial reverberation, 566
  threshold and loudness of repeated bursts of noise, 1502
Adsorption, of W on W and Ba on W, electron-microscope study of, 1077
Aerial arrays, broadside, dielectric, 1205
    Tchebycheff-type, calculation of current distribution of, 1211, (C)3002
  directive, circular, with cylindrical reflector, 1212
    semicircular and semicylindrical, with cylindrical reflector, 325
    wide-band, for u.s.w. beam links, 3354
  linear, broadside, supergain, impractibility of, 324
    dipole, u.h.f., 45
  ring, directive, theory of, 1518
Aerials, (See also Lenses, microwave; Radiation; Transmission lines)
  aircraft, cavity, glide-path, for jet-driven fighters, 921
    external and suppressed, survey of, 2725
    slot, field investigations for, 48
    use of complementary slots in impedance measurements on models, [illegible]
  bandwidth increase by means of compensation circuits, 39, 3350
  beam, specification of sharpness of cut-off for, 3357
  biconical, symmetrical, general theory of, 1516
  broadcasting, antifading, top-feeding of, 51
    directive, signal distortion by, 2800
    f.m., high-power, WMIT, 1207
    Langenberg, 1926–1951, 1838
    medium-wave, double-feed, experience with, 2439
    u.s.w., 43
    vertical, multiple-feed, theory of, 2138
    v.h.f., Wrotham, 916
  cage-type, for v.h.f. omnidirectional radio range, 3097
  centre-loaded, receiving, improved theory of, 3351
  with circular ground screen, impedance of, 586
    radiation pattern of, 3006
  conducting-ribbon, current distribution due to incident plane e.m. wave, (A)2441, 2723
  corrugated-surface, annular, 2442
    end-fire, microwave, 922
  coupled and folded dipole, current distributions along, 917
  cylindrical, current distribution along, 2119
    and feeders, current and charge distributions on, 592
    solution of Hallén's integral equation for, 2715
    thick, influence of plane reflector on impedance of, 587
  dielectric-lens, for marine navigational radar, 327
  dielectric-rod, radiation patterns of, 2121, and gain of, 1204
  dipole, above conducting plane, radiation from, theory of, 330, 915
    crossed, λ/2, mutual impedance of, 589
    cylindrical, gain and back-scattering cross-section of, 2716
    near ellipsoid of revolution, radiation resistance of, 2997
    horizontal, near ground, input impedance of, 2722
    with tuned parasitic radiator, 1202
    Zuhrt's theory of, (D)920
  dipole and slot, mutual coupling of, 1835
  directive, with increased line-wavelength, 3353
    nonrotating, vertical, 595
    with single reflector, design of, 3352
    transmitting, at Herstedvester, Denmark, 1736, for λ 3 cm–3 m, for beam stations, 328
  earthing system, radial-conductor, design of, 2729
  feeders for, abac for efficiency of, 330
    cage-type, 3431
    long, efficiency at v.h.f., 2116, multiple reflections in, 2719
  frame-coil and stretched-wire loops, comparison for ship d.f., 2517
  helical, with sinusoidal current, radiation field of, 596
    square, with few turns, radiation characteristics of, 2995, radiation field of, 2726
  horn, application of transmission-line theory to, 29
    theory of, 1841, (C)3006; 2727
    waveguide excitation of, analysis of, 46
  impedance measurement by two methods, 585
  inverted-L, 79·15-kc/s, at Barcelona, 42
  isotropic, proof of impossibility of, 37
  lens, u.h.f., new type of, 2443
  lens-type, for TD-2 relay systems, 2122
  loop, with ferrite cores, 1520
    for field-strength meters, calibration of, 452
  masts for, construction and erection of, 1736
  microwave, automatic wave-front plotter for, 1380
    for relay stations, optimum-height determination by helicopters, 498, prism-type, for dm λ, 3003
  omnidirectional, for naval use at 225–400 Mc/s, 593
    wide-band, for m and dm λ, 919
  parabolic, microwave, practical design of, 2447
  parallel, identical, self and mutual impedances of, 2999
    input-impedance calculation for, 326
  plane, of small width, 584
  polar diagrams of, Fourier analysis for calculation of, 1422, (D)1720
  progressive-wave, 36
  radar, rapid-scanning, design of, 2445
  radiation characteristics of, calculation by Kirchhoff's formula, 3000
  receiving, radiation or diffraction patterns near, (D)2187
  inside rectangular waveguide, radiation from, 1199
  rhombic, with arbitrary termination impedance, radiation distribution of, 1213
    horizontal, design data for, 2728
  rod, radiation resistance of, distribution of, 583
  rotationally symmetrical, current and voltage distribution along, 2437
  shaped-beam, calculation of, 923
  slot, annular, theory of, 323
    and application to aircraft, 2724
    in circular waveguide, theory of, 2720
    with directive element, 2717
    electrolyte-tank measurements of aperture parameters, 725, (C)1365, 3490
    input impedance of, 1839
    theory of, 2718
    waveguide-fed, radiating into parallel-plate regions, 3343
  slotted-cylinder, radiation patterns and conductance of, 1842
  superdirective, impracticability of, 2120
  television, at Buenos Aires, 1209
    receiving, characteristics of, 2440, and feeders for, 576, horn-type, 329, u.h.f., characteristics of, 1517, u.h.f., performance tests on, 1840
    transmitting, 1208, directive, supergain, for KRON-TV, 40, helical, side-fire, 44, u.h.f., 1449
  theory of, Booker's extension of Babinet's principle, 2436
  with thickness discontinuities, theory of, 1203
  transmitting, u.h.f., high-gain, omnidirectional, 3001
  tuning and matching of, 38
  turnstile, with tubular shield, radiation characteristics of, 2996
  u.s.w., measurement of radiation of, 1519
  V-type, theory of, 918
  waveguide, uses of ferrites in, 2721
  wide-band, 2117
    characteristics of, 2118
    folded-fan, 590
  wire, mutual impedance of, 588
  for λ 3–10 cm, measurement of radiation characteristics of, 2446
Aether, existence of, 1573, (D)2203, (D)2769
Aircraft, r.f. current distribution on, 47
Alloys, (See also Ferromagnetic materials)
  Al, effect of alloying elements on resistivity of, 1646
  Ni-Cu and Pd-Ag, structure and physical properties of, 2542
Amplification, distributed, circuit design for, 2167, (D)2760
  by means of relativistic effects, possibility of, 3383
  selective, at low frequencies, 1563
  travelling-wave, with coupled transmission lines, 867, (C)1469
Amplifiers, a.c., compensation of heater-voltage variation in, 2761
  a.f., with adjustable nonlinear distortion, 26
    British, review of, 1245
    capacitor-microphone, input-circuit design for, 637
    cathode-follower, 947
    damping factor of, 365
    microphone, construction of, 950, portable, with miniature valves, 946
    push-pull, single-end, 1250, 1558
    reduction of distortion and output impedance by feedback, formulae for, 1566
    symmetrical, with overall negative feedback, 949
    tunable shunt selector-rejector for, 1249
    ultralinear, 1512
    Williamson, examination of American claims for improvement of, 3387, modifications of, 2485
    7·5-W, for loudspeaker, 2171
  analysis by means of V_a/V_g characteristics, 2168
  cathode-coupled, analysis and design of, 1559, (D)2480
  d.c., driftless, for REAC analogue computer, 1877
    with low zero-offset, 93
  dielectric, using capacitors with ferroelectric dielectric, 1561
  differential, direct-coupled, and mathematical applications, 366
    for discriminating against push-push signals, 3392
  direct-coupled, feedback, compensation of zero-drift errors in, (D)1252
    frequency-compensated, for 4-channel pen recorder, (D)1878
  for electrical measurements, review of, 723
  feedback, dual circuit of, 1564
    equivalent circuits for design of, 1565
    stability of, 367
  frequency response of, effect of feedback on, 2482, (D)3386
  galvanometer, analysis of, 1972
  h.f., for multichannel R/T transmitters, 2923
    narrow-band, calculation of, 92
  i.f., miniature, N.B.S. Model VI, 1246
    rules for construction of, 2169
  line, for broadcasting programme transmission, 2468, German, Type 48, 1233
  for low-temperature operation, 1875
  magnetic, improvements in, 2132, 2732
    multistage, compensation of quiescent current in, 2731
    noise figure of, 924
    with Orthonol-tape cores, 925
    parallel-connected, with resistive loads, analysis of, 3014
    prediction of control curves for, (A)3012
    properties of basic types of, 3362
    response time of, 3013
    self-saturable, analysis and design of, 337, steady-state performance of, 3016
    technique of, 1849
    time constant of, 927
    transient response of, (A)926
    transients in, analysis of, 2133
  m.f., with reduced phase distortion, 951
  negative-feedback, Class-A, distortion and power output of, 95
    matrix analysis of, 952
    overloading under pulse conditions, 2764
    with specified amplitude/frequency characteristics, 642
    transient response of, 1879
    wide-band, transients in, 96
  network representation of admittances of, (C)641
  pentode, application of complex feedback in, 2173
    with positive feedback, 953
  photoelectric, 2287
    using gas-discharge triode, 873
  power, Doherty, theory of, 3390
    r.f., overvoltage effect in, 1560
    using transistors, 3388
  pulse, design theory for, 363
  push-pull, 'cathamplifier', 2172
    class-B, with choke output, nonlinear distortion in, 90
    integrating, for c.r.o. recording of magnetic flux, 2876
  RC, distortion of N-shaped signals in, 2484
    low-pass, for very low frequencies, 3391
  resistance-coupled, theory of, 2763
  series-connected, 1247
  stabilization of gain of, 362
  transient response of, calculation of, 2762
  transistor, circuits and construction types of, 640
    operation and characteristics of, 639
  travelling-wave, wide-band, frequency-sweep test methods for, 212
  triode, noise suppression in, 1876
    resistance-coupled, h.f. characteristics of, 1251
  for use in low-current measurement, reduction of response time of, 1364
  video, effective bandwidth of, 3050, 3385
  volume-control, control-curve calculation for, 86
  wide-band, design of, 948
    i.f., radar, design of, 89, stagger-tuned, 2176, stagger-tuned, simplified calculations for, 1562
    multistage, using maximally-flat-delay networks, 3375
    for use in measurements of atmospherics, 1248
  1–200 c/s, background noise in, reduction of, 2483
Analogue, electrical, of motor-car suspension system, 1060, (D)2563
Analysers, distortion, for a.f. range, 2106
  frequency-spectrum, a.f., for aperiodic phenomena, 2271, using gated amplifier, 3170, heterodyne-type, 3171, octave-band, for acoustic measurements, 2969, recording-type, 9
    h.f., high-resolution, 1050
    for mm waves, 2260
    10–300-kc/s, with crystal filter, 1962
  pulse-amplitude, 603, 1214, 1846
    and decade counter for, 3009
    high-speed, 604
    mechanical, 54
    multichannel, for scintillation counters, 3010
    single-channel, 3008, for coincident pulses, 2449
    for time-interval measurements, 3157
    10-channel, 2130
  waveform, Muirhead-Pametrada Type D-489, adaptor for range extension to 2 c/s, 3182, applications in aircraft-engine research, 3181
Analysis, of experimental curves, for determination of physical characteristics, 373
  of experimental data, corrections in, 1256
  Fourier, and negative frequencies, 1422, (D)1720
  graphical, for nonlinear systems, (A)1945, 2836
  harmonic, of distorted oscillation after limiting, 193
    and symbolic calculus, graphical method for, 2779
Antiferromagnetism, lowest energy state of linear chain, 2199
  quantum theory of, 2200
  theory of, 1579
Astronomy, radio, 668, 1278 (See also Cosmic radiation; Solar radiation)
    interferometer equipment for, 2497
    radio stars, annual parallax of, 1903, distribution in galaxy, 1905, long-period intensity variations of, 979, in northern hemisphere, survey of, 121, positions of, 978, and radio nebulae, 2214
    265-ft steerable telescope for Manchester University, 3074
Atmosphere, (See also Ionosphere; Stratosphere; Troposphere)
  conductivity at 1-m height and at ground level, 2806
  near ground, height variations of ion concentration in, 410, 1608
  ionization produced near ground by radioactive substances, 412
  lower, electrical conductivity of, 411
  oscillations in, thermal excitation of, 392

and tables, for parameters of 2-stage band-pass filters, 1236
for television fringe-area reception calculations, 1457
3-dimensional, construction of, 714
Chokes, mean winding length of, determination of, 61
Circle diagrams, recorder for a.f. range, 740
Circuit theory, (See also Networks)
waveform correction by use of 'time equalizers', 72
Circuits, (See also Networks)
adding and counting, for EDVAC digital computer, 1357
and assemblies, miniaturization techniques for, 1549, 2754
cathode-follower, with capacitive load, frequency dependence of input impedance of, 87, operation of, 2481
series connection for high impedance-transformation ratios, 945
clipper, cathode-coupled, speed of response of, 941
compensation, increase of aerial bandwidth by, 39, 3350
complex power and impedances of, 1854
coupled, quadripole theory for, 78
theory of pull-in effect for, 3379
triple-tuned, analysis of, (C)1240
tuned, input-admittance characteristics of, 1241, (C)2157
electrometer, valve, mains-supplied, stabilized, 1669
equivalent, review of, 601
for 6-pole and higher-order-multipole networks, 355
feedback, linear and pseudolinear, application of matrix calculus to, 2145
with and without feedback, transfer properties of, 70
flip-flop, delay, for flash-bulb release, 1232
Eccles-Jordan, transition in, 62
'ferroresonant', and application in counters, 1852
as pulse-amplitude comparators, 2164
frequency-converter and oscillator, using balitron valve, 2388
with frequency-dependent resistance and frequency-independent reactance, 3023
linear, passive, pulsed, transmission function for, 2466
linear-rectifier and balanced-limiter, analysis of, 2588
multivibrator, c.r.o. display of switching in, 931
multivibrator and flip-flop, use of transistors in, 1555
nonlinear, operational analysis of, (C)613
with nonlinear resistor, 'internal resonance' in, 75
oscillatory, analogue-computer study of, 943
control coupling of, 356
h.f., constant-frequency, 74
response to linear-frequency-sweep voltage, 942, 3041
printed, practical assembly of, 629
pulse, for mμs range, 1525
pulse-sharpening, 2476
RC-coupled, maximum pulse sharpness in, criteria for, 631
rectifier, h.v. and 'centre-tapped', 3565
relay, application of Boole's algebra to synthesis of, 2135
resonant, with periodically varying resistance, 2471, (D)2756
with small nonlinearities, analysis by equivalent circuits, 3026
switching, compact, using Se rectifiers, 3017
n-terminal, 73
transistor, noise figures of, 3389
valve, application of matrix theory to, 2744
application of 'reversal' concept to, 346
v.h.f., small-signal analysis for, 2137
Clerk Maxwell, memorial lecture, 2400
Clocks, 'atomic', and frequency stabilization by means of microwave spectral lines, 1659
electronic, ultimate accuracy of, 2163
with rate the arithmetic mean of the rates of several clocks, development of, 3458
Clutches, magnetic-powder, 3191
piezoelectric-crystal, high-speed, for computers, 1690
Codes, (See also Communication, theory of)
minimum-redundancy, construction of, 3546
use of linear systems, 3547
Coils, (See also Inductors)
with ferromagnetic cores, distortion in, 2454
helical, e.m. field of, 1580
iron-cored, measurements on, in range 1 c/s–1 Mc/s, 196
for magnetic devices, design charts for, 3365
multilayer, internal capacitance of, 342
repeater, with divided secondary, 1548
for line transmission of music, study and tests of, 2469
solenoid, single-layer, a.c. resistance of, 609
Colour pictures, additive, subjective tests of sharpness of, 830
Communication, theory of, application of probability calculus in, 3225
and application to taxonomy, 2960
basis of, 488

application of differentiating circuits in, **1688**
automatic, of inaccessible-terminal voltages, **1062**
of power supplied to electric heater, **3561**
equipment, for German post office broadcasting-network repeater stations, **1726**
process, electrical system for, **1386**
radio, of model aircraft, **2309**
technique, electrical, symposium of papers on, **3192**
—— **systems,** closed-loop, logarithmic-plotting technique for design of, **2039**
combined open-cycle and closed-cycle, **810**
electro-analogue for study of, **456**
stability of, **2619**
synthesis by root-locus method, **2337**
Converters, (See also Frequency converters)
d.c./a.c., comparison of, **504**, **(C)**1119
Copper, Chilean, impurities in, **1021**
Cores, Mn-ferrite, loss angle of, **429**
powder, magnetic after-effect in, frequency dependence of, **1326**
and sheaths, magnetic, in telecommunications, **2246, 3479**
tape-wound, **3471**
Correlator, electronic, for reception in noise, **248**
Cosmic radiation, r.f., (See also Astronomy, radio; Noise, r.f.; Solar radiation, r.f.)
from Andromeda nebula, **1285**
from Cygnus region, **120, 1904, 2788**
extra-galactic, **2215**
from galaxy, origin of, **390**
review of, **1279**
at 18·3 Mc/s, **980**
at 255 Mc/s, **3423**
at 1·21 and 3 kMc/s, **1906**
at 1·42 kMc/s, from galactic H, **961,** and galactic rotation, **982**
at 25–110 Mc/s, 1948–1949 records of, **3421**
Counter tubes, cold-cathode, glow-discharge, Types G1/370 K and G10/240 E, **2933**
gas-filled, I.R.E. standard definitions of terms, 1952, **3207**
I.R.E. standards on methods of testing, 1952, **3208**
multicathode, **(A)2657, 2932**
Counters, crystal, diamond, **1398, 3526, 3527,** charge transport mechanism in, **769,** differences in, **2004,** space charge in, **231,** space-charge-free, **232**
G-M, Br-quenched, characteristics of, **767**
circular, construction of, **1079**
directive effect in, **464**
external-cathode, construction of, **1078**
factors affecting stability of, **465**
gas-filled, **3210**
for locating ionizing particles, **230**
non-self-quenching, slow discharge in, **766**
toroidal, **2571,** construction of, **768**
Xe-filled, **2003**
Xe/O-filled, **1399**
pulse, electronic and electromechanical, survey of, **928**
scintillation, characteristics of, **3528**
self-quenching, parallel-plate, **3525**
containing small amounts of polyatomic gas or vapour, **1704**
sub-unit system for nucleonics, **610**
windowless and end-window, sensitivities of, **1397**
Couplers, directional, arrays for superdirectivity, **(D)2990**
multi-element, **3380**
use in aerial-matching measurements, **2435**
Coupling, control, of oscillatory circuits, **356**
waveguide, by large apertures, **2473**
window, cm-λ applications of, **2158**
Crystals, BaO, growth of, **174**
lattice vibrations of, interaction of electrons with, **1575**
SiC, emission of light on passage of current through, **154**
Current, h.f., meters for, **1040**
Cybernetics, and applications, **233, 2005**
definitions of Plato and Ampere, **489**

D

Detection, of f.m. signals, **2590**
Detectors, a.m., characteristics of, **483**
coherent, and synchrodyne, **2883**
coherent and incoherent, comparison of, **(A)255, 795**
frequency, dynamic characteristics of, **484**
using frequency-dependent rectifiers, **282**
radiation and particle, in nucleonic instruments, **765**
ratio, limiting in, calculation of, **485,** theory of, **2016**
theory of and measurements on, **2324**
v.m., microwave, **2884**
Diamonds, as counters, differences in, **2004, 2308**
properties of, **1398, 3526,** for β-particles, **3527**
dielectric constant of, **3143**
effect of inhomogeneities on electrical properties of, **1640**
for particle counting, structure of, **3211**
Dielectric constant, and absorption coefficient, of gases, u.h.f. measurement of, **1368**
of air, and main constituents, at 24 kMc/s, **1371**
at λ 10 cm, **(D)1957**
at 3 kMc/s, **3127**
of BaO crystals, **157**
cavity-resonator measurement of, at cm λ, theory of, **442**
at 3 kMc/s, for solids, **1033**
coaxial-line measurement of, at 40 and 55 cm λ, **3492**
at m and dm λ, **1956**
determination from shorted-line measurements, charts for, **3166**
determination from waveguide measurements, abac for, **1367, 2270**
and dissipation factor, measurement of, **2268**
field dependence of, **1932**
of human blood, at u.h.f., **749**
of low-conductivity fluids, at cm λ, **1664**
measurement of, effect of reactance in λ/4 Lecher line on, **3491**
of mixtures, theory of, **3112**
of sea water, **3424**
of solvents, variation with temperature, **687**
of water and aqueous solutions, cm-λ measurements of, **1663**
of water vapour, at 9·28 and 24·8 kMc/s, **2269**
—— **loss,** determination from d.c. measurements, **2848**
h.f., and resonance absorption, **707**
measurement by cavity-resonator method, **1666, 3162**
in polar polymers, effect of orientation on, **3113**
—— **properties,** c.r.o. method for investigation of, **441**
of highly absorbing dielectrics, measurement by 'infinite layer' method, **1370**
of human tissue, at microwave frequencies, **1385**
of ice and snow, at 3·2-cm λ, **3494**
measurement during h.f. heating, **(A)1032**
of solids, temperature variation of, **191**
of substances containing straight polar chains, **2272**
of TiO$_2$, **1345**
of water and methyl and ethyl alcohols at u.h.f., **3399, 3400**
of water in water-dioxan mixtures, at microwave frequencies, **695**
Dielectrics, artificial, effect of magnetic field on propagation of e.m. waves in, **1587**
isotropic, theory and properties of, **2523**
for microwave lenses, design techniques for, **2423**
strip-loaded, for microwave lenses, measurements on, **727**
Diffraction, (See also Sound)
acoustic, aperture transmission cross-section for oblique incidence, **2686**
by circular apertures, **304**
by sphere, and reciprocity theorem, **2676**
of cm waves, by cylinders, **2186**
of cylindrical e.m. waves, by circular aperture, **2771**
of e.m. pulse, by wedge, **3056**
of e.m. waves, by aperture in plane conducting screen, **1583, 2184**
near earth's surface, **238**
and Huyghens' principle, **2487**
by perfectly reflecting wedge, **374**
by plane screens, and application to microwave lenses, **970**
by semi-infinite metal sheet, **3418**
by semi-infinite plane screen, **969**
by straight slit, **2183**
by waveguide of finite length, **2185**
by wire gratings, **3057**
of light by semitransparent sheet, **1883**
of plane e.m. waves by circular disk or aperture, **968**
of plane sound pulse by grating, **2415**
of radio waves, in passage through phase-changing ionosphere, **1284**
patterns near receiving aerials, **(D)2187**
rigorous formulation of classical problem of, **2182**
of sound pulse by wedge, **2966**
of sound waves at uneven surface, **1181**
Dimensions, of electrical and magnetic quantities, **2775**
Direction finders, Adcock, H-type, polarization errors in, **2812,** for m and dm waves, **598, (A)1521**
s.w., recent developments in, **2519**
for aircraft, calibration of, **143, (C)997**
cm-wave, **998**
polarization errors of, classification of, **142**
for ships, comparison of frame coils and stretched-wire loops for, **2517**
requirements for and developments in, **2516**
Telegon, **139**
goniometer for, **140**
u.s.w., Type PV-1B, at Kloten airport, **141**
—— **finding,** angle measurement in, **3092**
methods of, review of, **138**
Discharge, (See also Breakdown)
arc, gas, theory of, **3066, 3067**
high-current, effect of self-magnetic field in, **100, 1889**
hot-cathode, discharge modes for, **959,** anode-glow mode of, **3068**
electrodeless, in ionized gas in travelling magnetic field, **2195**
gas, d.c., current fluctuations in, **1891**
electron-temperature determination for, **1465**
low-pressure, r.f. noise in, **3064**
mechanism of positive-ion collection by spherical probe in, **957**
potential field of, **103**
u.h.f. excitation of, **1887**
as u.h.f. noise source, **185**
h.f., breakdown mechanism of and similarity relation for, **378**
similarity relation for minimum maintenance potentials, **379**
Hg-vapour, low-pressure, dielectric constant and electron density in, **651,** l.f. noise spectra of, **2942**
ion-surge, and arc-back in Hg-vapour rectifiers, **380**
spark, wide-gap, in air, mechanism of, **3403**
Townsend, pulsed, electron-emission processes in, **960,** transient currents in, **101, 958**
—— **tube,** (See also Valves)
gas, plasmatron, **873, 2659**
plasmatron and others, **872**
glow, cold-cathode, **2071**
voltage-regulator, characteristics of, **1772**
Discriminators, for f.m. beam links, distortion in, **2329**
including null networks, general theory of, **1416**
pulse-counting, for f.m. monitoring, **3589**
u.h.f., and use for frequency stabilization of klystron, **59**
Distortion, in beat-frequency oscillators, **1552**
in coils with ferromagnetic cores, **2454**
in discriminators used in f.m. radio links, **2329**
echo, of f.m. and a.m. signals, **2890**
in f.m. multiplex R/T, **2022**
envelope-delay, c.r.o. display and measurement of, **2286**
in f.m. systems, due to aerial-feeder mismatch, **2602**
due to small loss and phase variations, **2027**
low-frequency, due to h.f. phase shift, **2881**
of N-shaped pulses in RC amplifiers, **2484**
needle-drag, in gramophone reproduction, **2423**
nonlinear, in push-pull class-B amplifiers with choke output, **90**
in output of negative-feedback amplifiers, **95**
in p.c.m. systems, analysis of, **2332**
and background noise, **2331**
pulse, in f.m. systems, **1215**
in linear systems, **55, 619**
in RC and LG lines, **578**
reduction by amplitude limiting, analysis of, **193**
second- and third-harmonic, in transmission of music, **3322**
signal, by directive broadcasting aerials, **2600**
of signals transmitted by homogeneous coaxial line, **1194, (C)3336**
spatial, acoustic, applications of concept of, **3300**
third-harmonic, in ring modulator, **1874**
Dynamos, amplifying, use in servomechanisms, **2620, 3240**

E

Ear, (See also Hearing)
cochlear partition, d.c. potentials and energy balance of, **307**
nonlinear characteristics of, **10**
Earths, lightning-protection, value of h.f. measurements on, **3165**
Eddy currents, in cores with nonuniform permeability, **3122**
due to domain-boundary displacement, **3115**
Electrets, thermal conductivity of, **3443**
Electric field, in semi-infinite slot with semicircular end, **3071**
Electrical properties, of non-metals, effect of electron mean-free-path on, **1577**
—— **quantities,** and mechanical quantities, analogies between, **2178**
Electroacoustics, definitions of terms, 51 IRE 6 SI standard on, **(C)883**
Electroluminescence, in anodic polishing of Zn, **3055**
theory and applications of, **647**
Electrolyte tank, with automatic recording, **3179**
current lines in, automatic tracer for determination of, **2283**
for study of magnetic fields of iron-clad current sheets, **2284**
use in design of filters, **622**
Electromagnetic field, of helix, **1580**
microwave, c.r.o. plotter for, **448**
inside spherical envelope with nonuniform permittivity, **3415**
—— **theory,** asymptotic solution of Maxwell's equations, **646**
boundary-value problems and Wiener-Hopf techniques, **1572**
energy density and flux, comparison of Poynting's and Macdonald's theorems, **2776**
field representations in spherically stratified regions, **663**
radiation capacitance, **1894**
—— **universe,** physics of, **2767**
Electromagnetism, classical theory of point charge, **2188**
new theory of, **2201**
Electrometers, leaf-type, mechanically astatized, **3177**
vibrating-capacitor, **3500**
Electron beams, axially symmetrical, in magnetic fields, theory of, **2865**
converging, elimination of space-charge effects by magnetic field, **1466**
cylindrical, space-charge-wave propagation in, **2371**
dispersion of, in gases, **3406**
equivalent temperature of, **(D)1780**
high-energy, radiation from, application of, **(C)966**
probabilities relating to, **3407**
in valves, current distribution in, **2072**
—— **density,** in ionized gas, microwave measurement of, **653**
—— **emission,** (See also Cathodes)
from cold Ni cathode oxidized by sparking, **98**
from metal in electric field, **1467**
secondary, comparison of theories of, **108**
from composite surfaces, **2198**
fundamentals of, **656**
from insulator in equilibrium with space charge and constant-potential enclosure, **2364**
from liquid metal surfaces, **109**
from metals, theory of, **107**
from Ni, angular distribution of, **1769**
from solids, theory of, **3069**
theory of, **2197**
Wooldridge's theory of, **110, 3409**
thermionic, of ceria, **2196**
efficiency of, **2650**
equation for, **1892**
from ferromagnetic materials, anomalous temperature variation of, **3070**
thermionic constants of graphite, **3467**
—— **guns,** for straight beam, **1171**
3-element, theory of, **2087, 2944**
—— **lenses,** determination of axial field of, **2298**
e.s., dioptrics of, **227**
elliptical, theory for transgaussian conditions, **1391**
formed by two coaxial cylinders, **1393, 2302**
formulae for third-order aberrations in, **460**
graphical determination of electron paths in, **462**
with grids, axial potential of, **1696,** Gaussian elements of, **1697**
independent, with minimum elliptical astigmatism, **1390,** third-order rays in, **2001**
low-power, theory of, **1389**
nearly symmetrical, theory of, **1072**
rigorous calculation of, **1698**
symmetrical, field distribution in, **1396**
as velocity filters, **461**
3-electrode, axial potential of, **2865,** potential model for study of, **2000,** trajectories in, approximation method for, **2299**
highly convergent, approximation method for trajectories in, **3202**
immersion objective, emission current in, **3520**
magnetic, aberrations due to asymmetry of, **1074**
analogous to optical plano-concave lens, **1395**
axial field pattern of, **195**
electron-microscope-objective, with minimum chromatic aberration, **2570,** with minimum spherical aberration, **1703**
electron-velocity analysis with, **1700**
image-forming properties of series of, **1701**
projector, for electron microscope, **2569**
study of, by W.K.B. method, **3203**
third-order aberrations of, **228**
mathematical model of, **1394, 2300**
cardinal parameters of, **2301**
numerical ray-tracing in, **2303**
optimum focusing in, **463**
paraxial constants of, derivation of, **3519**
spherical aberration of, correction of, **763**
test for, **1075**
useful formulae for, **1392**
—— **microscope,** at Calcutta, study of illuminating system of, **1073**
effect of specimen charging in, **3522**
hot-cathode guns for, characteristics of, **2304**
magnetic, resolution and magnification limit of, **459**
reliability of internal standards for calibration of, **3521**
Type EM4, 55-kV, **764**
velocity filters for, **3204**
—— **microscopy,** inorganic-replica technique in, **1071**
ion image of emissive anode, **1695**
technique for examining identical areas with electron and optical microscope, **3523**
—— **mirror,** equation for trajectories in, **2307**
—— **motion,** in periodic e.s. field, effect of magnetic field on, **1588**
—— **multipliers,** (See also Photocells)
with Al$_2$O$_3$Cs emitters, **1160**
research on, **2388, 3602**
—— **optics,** application of Newton's law of image formation in, **1699**
application of perturbation functions in, **1997**
of e.s. systems with rectangular and elliptical apertures, **1076**
properties of magnetic deflection fields, **1999**
refractive index in, **(D)1998**
—— **oscillations,** excitation in shock wave, and solar r f. radiation, **1900**
—— **plasma.** See Plasma.
—— **streams,** coupled to circuits, waves in, **106**
oscillations in, **654**
—— **trajectories,** automatic tracer for, **2852**
Electronic applications, (See also Control; Heating)
alarm systems, **218**; automatic timer for bullet photography, **1384**; colour matcher, **219**; control of rate of watches or clocks, **3195**; c.r.o. engine indicator Mark 6, **754**; crack detector for gun barrels, **454**; fatigue-testing equipment, **750**; furnace temperature control by thermistors, **2291**; judgment box, **217**; liquid-level gauge, **3188**; measurement of ignition delay in i.c. engines, **224**; metal detectors, design of, **1065**; photostimulator for clinical use, **225**; pulse-counter tachometer, **2289**; soldering-temperature control, **772**; vibrating-plate viscometer, **1686**
Electrons, and crystal-lattice vibrations, interaction of, **1575**
free paths in crystals, and related effects, **3408**
and ions, recombination of, mechanism of, **658, 962**
new classical theory of, **1574, 3059, (D)2202**
and existence of aether, **1573, (D)2203, (D)2769**
reflection by metallic crystals, **961**
Electrostatics, and magnetostatics, general solutions of equations of, **1262**
Electrostriction, in ferroelectric ceramics, **2819**
theory of, **3446**
Exhibitions, applied electronics, Manchester, 1951, **758**; British Instrument Industries, London, 1951, **1794**; components, Paris, 1952, **2154**; components, R.E.C.M.F., 1952, **2153**; electronic instruments and equipment, Manchester, 1952, **3623**; German Industries, Berlin, 1951, **1442**; I.R.E. 1952, a.f. equipment at, **2699**; Paris Fair, 1951, **791,** 1952, **3220**; Physical Society, 1952, **2401**; Society of British Aircraft Constructors, 1951, **1178**; television, Paris, 1951, **1138**; Vienna Spring Fair, 1951, **250**; 5th annual R.S.G.B. amateur-radio, **2402**; 18th National Radio, London, 1951, **292, 561**; 19th National Radio, London, 1952, **3577**; 19th Salon International de l'Aéronautique, Paris, 1951, **2097**; 26th International Fair, Brussels, 1952, **3297**

    Au, influence of support on crystallization of, **172**
    carbon, conductivity of, **171**, **2827**
    Fe, resistance variation with current at low temperatures, **2828**, resistivity measurements on, **2238**
    glass, conductivity and breakdown strength of, **2833**
    insulating, in contacts, tunnel effect across, (**C**)**1017**
    luminescent, transparent, **685**
    metal, conduction in, mechanism of, **876**, freshly condensed, contact-potential variations of, **1886**, temperature and voltage variation of, **1634**, variation of resistance with applied potential, **2192**
    PbTe, infrared photoconductivity of, **860**, **861**
    polymer-dielectric, noise in, **3478**
    Pt, on evaporated dielectric layers, resistivity of, **3126**
    semiconducting Sb, photoconductive properties of, **2522**
    Se, photoconductivity of, **3104**
    Si, conductivity of, **3451**
    TiO_2, insulating, resistance of, **3114**
    ZnO, conductivity variations with electron irradiation, **3470**, energy conversion in irradiation with light or electron beams, **3469**, evaporated, measurements of Hall effect in, **2825**, evaporated, photoconductivity of, **3468**
    ZnS, electron-bombardment-induced conductivity of, **1630**
Filter-transformer unit, miniature, design of, **2749**
Filters, (See also Networks)
  a.f., heterodyne, **1864**
  analysis and design of, using straight-line representation of characteristics, **1546**, (**D**)**2751**
  band-pass, bridge-type, using magnetostrictive ferrite elements, **694**
    cavity, for cm waves, **2149**
    construction from basic circuits, **2748**
    h.f., with *n* coupled circuits, **2753**
    with maximum bandwidth, use of tuned transformers in, **1863**
    mechanical, 100-kc/s, **2752**
    narrow-band, crystal, **354**, electromechanical, **3034**
    waveguide, **3346**, tunable, **353**, **1834**
    2-stage, charts and tables for parameters of, **1236**
    4-circuit, and bandwidth switching, **69**
  bridge-type, quartz, mode of operation of, **3035**
  choke, transformer properties of, **1234**
  crystal, complementary high-pass and low-pass, for 24-channel carrier system, **71**
  and delay lines, equalized, design of, **3029**
  design of, modification of conventional method of, **1862**
  frequency response of, measurement of, **2847**
  with generalized parameters, calculation of, **1545**
  ideal, generalized, investigation using function-space techniques, **2147**
  ladder, without attenuation fluctuations in pass band, **1543**
    composite, design of, **1544**
  lattice, crystal, design of, **3033**, maximum bandwidth of, **1235**
  linear, variable, theory of, **2464**
  low-pass, T- and Π-type, for measurement equipment, **352**
  microwave, using multimode cavity resonators, **625**
  multiple-resonant-circuit, alignment of, **627**, **3038**
  with phase distortion, theory of transmission time and build-up time in, **2465**
  RC, double-T, theory and applications of, **2148**
    multisection, theory of, **623**
    polyphase, synthesis of, **3037**
  symmetrical and antimetrical, characteristic functions and attenuation calculation for, **3377**
  Tchebycheff-type, h.f., and amplifier networks, **88**, (**C**)**2179**
    low-pass, and amplifier networks, **1541**
  theory of, introduction to, **2747**
    use of transform methods in, **2750**
  time and frequency phase responses of, redundant information in, **3378**
  use of electrolyte tank for design of, **622**
  vestigial-sideband, for Sutton Coldfield television transmitter, **636**
Fluxmeter, recording, with high accuracy and sensitivity, **3174**
Frequency, (See also Analysers; Analysis; Standard frequency)
  allocation, international, for broadcasting, principles of, **3227**
  changers, using frequency-dependent rectifiers, **283**
    microwave, travelling-wave valves as, **1463**
  comparator, **1679**
    recording, **3172**
  comparison, of nearly equal frequencies, **1979**
  control, 'master and slave' system for radio link, **1782**
    automatic system, narrow-band, transient response of, **606**
  converters, as quasilinear quadripoles, **2166**
    u.s.w., for relay station, **2646**
    wide-band, for signal generator, **1383**
  dividers, balanced-modulator type, modification of, **3384**
    decade, multivibrator design for, **1557**
    locked-oscillator, **944**
  division and multiplication, **633**
  measurement, by capacitor-charge method, **732**, **2272**
    L.N.R. department for, organization and equipment of, **3159**
    in microwave range, **3173**
    r.f., self-interpolating crystal calibrator for, **1964**
  meter, direct-reading, for 30 c/s–30 Mc/s, **743**, **2855**
    primary-standard, U.S. Navy, **1378**
  multiplication, high-power, at v.h.f. and u.h.f., use of tetrodes for, **3048**
    by means of relativistic effects, possibility of, **3383**
  multipliers, with selective grid circuit, **84**
  negative, and Fourier analysis, **1422**, (**D**)**1720**
  spectrum, of a.m. and f.m. signals, demonstration equipment for, **443**
    of f.m. wave, and Bessel functions, **2892**, (**C**)**3554**
  stabilization, (See also Stabilization, frequency)
    of klystron by u.h.f. discriminator, **59**
    by microwave absorption, **1850**
  standards, microwave, **1951**
    1-kc/s, synchronized by pendulum chronometer, **2262**
Furnaces, electric, review of, **1387**

G

Galactic radiation, r.f. (See Cosmic radiation, r.f.)
Galvanometers, and amplifiers, Brownian fluctuations in, **2280**
  integrating, **3176**
  moving-coil, applications in biological physics, **2282**
    for measurement of mean charging current of periodically discharged capacitor, **2281**
  vibration, using piezoelectric oscillator, **2851**
Generators, (See also Oscillators; Signal generators; Sound)
  acoustic, air-jet, synchronization of, **299**, for producing waves in liquids, **300**
  complex-waveform, **3498**
  e.s., h.v., charged-mercury-drop, **2047**, rotary, small, **274**, 1-MV, using glass-dust stream, **3517**
  frequency-sweep, 470–890 Mc/s, with crystal calibrator, **2285**
  harmonic, u.h.f., using Ge diodes, **636**
    using iron-cored reactor, (**A**)**812**
  h.f., with RC-line for frequency variation control unit, **3045**
  magnetostrictive, ferrite, **1801**
  for measurements at u.h.f., **2862**
  noise, microwave, calibrated, portable, **1986**
    Type 1390-A, **1987**
    0–25 c/s, **1030**
    1 c/s–20 kc/s, **721**
  pulse, cathode-coupled, **1244**
    high-power, with controlled spark-gap, **612**
    h.v., controlled tripping of, **611**
    using multivibrators and delay networks, **1871**
    for producing strong magnetic fields, **759**
    using saturable reactors, (**D**)**2450**
    square-wave, using Hg relay tube, **2479**, 2-channel, **1873**
    for variable-width pulses, **635**
    3-valve, with fixed repetition rate, **1554**
    0·1-μs, with repetition frequency 0·2 to 4·9 × 10^4/sec, **1683**
  sawtooth-wave, **2165**
    using transformation of sine waves, **1872**
  sonic and ultrasonic, commercial, review of, **2679**
  stepped-pulse, for television testing, **1684**
  tone, for electronic organ, **905**
  u.h.f., secondary-standard, of Compagnie Générale de T.S.F., **1377**
  ultrasonic, and applications, survey of, **1182**
    high-power, construction of, **4**
    industrial, economical, **2965**
    low-power, **5**
    magnetostrictive, linear, using crossed magnetic fields, **3308**
    siren, high-power, **1496**
  warble-tone, optimum frequency and sweep in, **3317**
Geomagnetic storms, and ionospheric storms, **395**
  and solar coronal region of intense radio emission, **2213**
  theory of first phase of, **2504**
  April–June 1951, **127**, April–Sept. 1951, **1288**, July–Dec. 1951, **2505**, Oct. 1951–March 1952, **2791**
Geomagnetism, and its changes, **2499**
  disturbances, and atmospheric pressure, **3428**
    international data, first quarter 1951, **124**, second quarter 1951, **1286**, third quarter 1951, **2501**, fourth quarter 1951, **2792**
    21st Sept. 1951, observations of very rapid pulsations during, **1910**
  field variations, anomalous, at Kodaikanal, **2503**, and winds in ionosphere, **1909**
    with depth, **1596**
    diurnal, abnormal, and equatorial electrojet, **1597**, interpretation of, **670**
    and earth's rotation, **126**
    secular, analysis of, **671**
    during solar eclipse, 25th Feb. 1952, **3425**
    world-wide, and relation to sudden commencements, **1908**
  K-indices at Abinger, Eskdalemuir and Lerwick, Jan.–July 1951, **391**, Aug.–Dec. 1951, **1907**, Jan.–March 1952, **2789**, April–June 1952, **3078**
    Cheltenham, April–June 1951, **125**, July–Sept. 1951, **1287**, Oct.–Dec. 1951, **2502**, Jan.–March 1952, **2790**
  occurrence of bays, and relation to ionosphere winds, **1603**
  and solar emission of corpuscles, **2494**
  solar-flare effects on, **2500**
    1936–1949, **389**
  vertical field, over the Sound (Sweden), **123**
  11-year variations of H, interpretation of, **2216**
Geophysical data, determination of lunar daily variations of, probable error of, (**D**)**2801**
Geophysics, and e.m. theory, **1595**
Ground, conductivity of, **433**

H

Harmonics, mains-voltage, meter for, **731**
Hearing, (See also Ear)
  aids, components of, testing of, **1193**
    measurements on, **903**
    Medresco, **2111**
    using piezoelectric transducers, **16**
    and test methods for, standardization of, **3335**
    testing of, **904**
    trends in design and technique of, **2963**
  audiometer measurement of loss of, **2101**
  frequency-compression properties of the ear, **1560**
  and phonation, relations between, **1184**
  physical processes in ear, **2100**
  recovery of threshold after exposure to intense sounds, **2418**
  stereophonic, physiological factors in, **1186**
  threshold anomalies in relation to equal-loudness contours, **2692**
Heating, combined dielectric and platten, temperature distribution in, **2564**
  h.f., dielectric, magnetrons and associated circuits for, **556**
    dielectric and induction, economics and applications of, **457**, efficiency and applications of, **756**, equipment for, and methods and applications of, **3194**, fundamentals of, **215**, industrial applications of, **755**, life of valves used in, **757**
    induction, control system for, **1064**, equipment for surface hardening, **3193**, generalized theory of, **216**
  m.f., induction, in drop-forging industry, **1893**
High-voltage generators. See Generators.
High voltages, alternating, measurement with capacitive voltage dividers, **440**, **2845**

I

Icing, experimental investigation of, **1589**
  in supercooled mists, electrical effect in, **677**
Ignitrons, time lag of, **1746**
Image converters, and applications, **2864**
  with concentric-sphere electrode system, **3284**
  as high-speed shutters in photography, **1400**, **1693**
Impedance, (See also Acoustics; Aerials; Networks; Transmission lines)
  acoustic, definitions of, **298**
    of porous materials, Beranek's theory of, **2695**
  characteristic, of coaxial cable, frequency-sweep measurement of, **3368**
    of free space, **3419**
  matcher, automatic, **1224**
  matching, of balanced transmitters to unbalanced transmission lines, **1887**
    high-impedance shorted stubs for, parameters of, **1855**
    methods of calculation for, **2141**
    for power amplifier and load, simplified design methods for, **1857**
    of travelling-wave valve Type M8 to waveguide, **2940**
    of travelling-wave valves Types M8 and M11 to coaxial lines, **2939**
  measurement, h.f., using bridged-T and parallel-T elements, **1665**
  meter, frequency-sweep, for 3–3·4 cm λ, **1673**
    for 0·05–2 kMc/s, **445**
  standards, coaxial, **186**
  vector, frequency-sweep measurement of, **728**
Impedor, waveguide, variable, using multihole coupling, **2150**
Inductance, mutual, of wire and portion of parallel conducting plate, **1581**
Induction, current, in conducting ribbon due to incident plane e.m. wave, (**A**)**2441**, **2723**
  electromagnetic and magnetoelectric, **2204**
Inductors, (See also Coils)
  as filters for radio-interference elimination, design of, **3019**
Instruments, electrical, aspects of design of, **1968**
    new principles in, **1966**
    performance limits of, **1971**
    properties of insulating materials for, **1940**
  electronic, for chemical laboratories, **2565**, **2863**
  for microwave measurements, **1969**
  modern methods of presentation of readings of, **1970**
  radiation-measurement, for infrared to ultraviolet waveband, **1991**
    for X-rays to cosmic rays, **1989**
  recording, self-balancing, for atomic-energy applications, **1037**
Insulating materials, (See also Ferroelectric materials)
  $BaTiO_3$, ceramics, effects of firing temperature on properties of, **1941**
    irreversible processes at low temperature in, **2245**
  ceramics, pyrophyllite, **1016**
  crystal, absorption of light in, **2181**
    electronic conduction in, **3475**
  dielectric properties of, **177**
  for electrical instruments, properties of, **1940**
  fibreglass, manufacture and applications of, **3477**
  glass, breakdown and conductivity of, **1348**
    dielectric losses in, **3476**
    manufacture of, technical control in, **1351**
    tellurite, properties of, **2834**
  hexagonal-$BaTiO_3$, Lorentz correction in, **173**
  mica, synthetic preparation and properties of, **3149**
  mica paper, production and properties of, **3148**
  organic polymers, deterioration of, **1020**
  $PbZrO_3$, antiferroelectric structure of, **1018**
    piezoelectric effect in, **1019**
  plastics, review of, **1349**
  polymers, ultrasonic investigation of mechanical properties of, **1317**
  silicone rubber, properties of, **1644**
  solid, mechanism of charge in, **3058**
  tantalates and niobates, properties of, **3111**
  titanate ceramics, properties of, **708**
Intercommunication, in aircraft, a.f. problems of, **1187**
  systems, using loudspeakers as microphones, acoustics of, **1820**
Interference, in broadcasting reception, from industrial equipment, French regulations for prevention of, **3223**
  in f.m. reception, due to strong unwanted stations, **2886**, suppression of, **1421**
  in f.m. and a.m. reception, due to weak unwanted transmitters, **2325**
  from h.v. lines, investigation of, **257**
  impulse, suppression by gradient limiting, **2020**
  internal, in television receivers, **1143**
  in radio receivers from television receivers, suppression of, **2021**
  technique for measurement of, **1029**
  in television, from r.f. heating installations, suppression of, **1144**, **1459**
  in u.h.f. television receivers with crystal mixers, **2642**
  whistle elimination in superheterodyne receivers, **487**
Interferometer, electron-beam, basic principles of, **2562**
  radio, and use for observation of weak radio stars, **2497**
  ultrasonic, fixed-path, theory of, **1808**
    recording, **1809**, and applications, **1807**
Intermodulation, measurement and analysis of, **336**
Ion microscopes, field-emission type, **2866**
—— **source**, thermal, for negative ions, **1268**
Ionization, and luminescence, of rocket exhaust gases, **657**, **1269**
  thermal, of trapped electrons, theory of, **3449**
Ionosphere, (See also Absorption; Atmosphere; Wave propagation, e.m.)
  currents in, and 11-year variations of earth's magnetic field, **2216**
  D layer, theory of formation and structure of, **132**, (**D**)**2508**
  D and E layers, electron distribution and s.w. absorption in, **1300**
  disturbance observed in Adélie Land, 2nd–5th Feb. 1950, **1293**
  E layer, absorption of solar energy by oxygen molecules in, **986**
    characteristics of, **133**, **1601**
    theory of ionization of, **1915**
  E and F layers, determination of collision frequencies in, **987**
  E_s clouds, echo method for study of, **3080**
    and v.h.f. propagation, **1084**
  E_s layer, electron-collision frequency in, **398**
    ionization at high latitudes, association with aurora, **2511**
    movements of, 16th–17th June 1949, **2509**, 17th–18th June 1949, **1914**
    and turbulence in upper atmosphere, **1912**
  effects of solar eclipse at sunrise, 1st Sept. 1951, **2800**
  effects of solar flares on, **134**
    during 1936–1949, **389**
  effects of temperature variations on layer formation in, **401**
  F layer, ionization variations and abnormally high radio absorption in Canada, [illegible]
    in polar regions, winter thickness of, **676**
    winds in, radio-astronomical investigation of, **3082**
  F_2 layer, over Calcutta, solar tides in, **400**
    dependence of disturbances on local time, **2795**
    effect of vertical ion drift due to solar tides in, **2799**
    graphical representation of longitude effect in, **3081**
    half-year period in ionization and height of, **1602**
    height fluctuation of, **673**
    ionization in, 'isanomalies' of, **1296**
    lunar variations of f_oF_2 at Singapore, **2369**
    observations at Singapore, **969**
    recombination coefficient during occurrence of Mögel-Dellinger effect, 19th Nov. 1949, **1295**
    regularities in, **1294**
    storms in, and magnetic storms, **395**, statistics of, **2802**
  height of extra ionization during fade-outs on 2 Mc/s, **404**
  integrated conductivity of, **2500**
  irregularities, **130**
    plasma resonance in, **403**
  layer below E layer, theory of formation of, **2797**
  layer formation in, **128**
  long-delay echoes, search for, **3079**

  lower, fine structure of, (D)131
    negative-ion concentration in, 983, 2796
    nocturnal ionization disturbances in, 3426
    winds in, and geomagnetic variations, 1909
  lower layers, calculation of height from waveforms of atmospherics, 990
  luni-solar tidal effects in, 402
  magneto-ionic triple splitting in, 672, 1913
  observations near Adélie Land, 399
  physics of, 2217
  recording, spot-frequency method for, 1299
  recording stations in Austria and under French control, 1606
  reflection heights for 1·42-Mc/s waves, 3427
  reflection of short waves at heights less than 100 km, 2317
  review for 1951, 1605
  sounding, equipment for, 405, 1917
    at oblique incidence, 674
  sunset effects on broadcasting in tropics, 2320
  temperatures, critical survey of, 396
  thermal r.f. radiation from, 406
  tides in, 2510
  two layers below E layer postulated to explain 16-kc/s propagation phenomena, 2804
  virtual height of, calculations for specific ionospheric distributions, 2507
  virtual-height records, rapid analysis of, 1292
  winds in, and geomagnetic bays, 1603
    observation of, 1297, 1298
    radio measurement of, 1916
      at 80–100 km height, meteor-trail echo method for investigation of, 3083
  at 100 km height, temperature of, and absorption of solar ultraviolet radiation, 1290
Ions, gaseous, positive, motion in strong electric field, 97

L

Laboratories, frequency-measurement, L.N.R., organization and equipment of, 3159
Lenses, (See also Aerials; Electron lenses)
  microwave, artificial dielectrics for, design techniques for, 2123
    lattice, for cm waves, 3004, experimental results for, 3355
    path-length, E-plane radiation patterns of, 50
    properties of, 49
    strip-loaded pseudo-dielectrics for, measurements on, 727
  plastic, cast, for Schmidt large-screen projection systems, 1445
Light, repetitive-spark sources for shadow and schlieren photography, 1888
  velocity of, determination of, 2180, 3396, band-spectrum method for, 3053
Lightning arresters, function of, 509
    Resorbit, design of, 815
  detection by radar, 1614
  experimental research on, review of, 3088
  protection, for electrical systems, 508
    since Franklin's day, review of, 3244
    for l.v. systems, 507
  statistical study for Switzerland, 1925–1947, 3087
Loudspeakers, (See also Sound)
  arrays, radiation patterns of, 1822
  bass boost by resonator with phase inversion, 20, 2979
  cone diaphragms for, amplitude and phase measurements on, 312
  cone-type, diaphragm resonance in, 3326, 3327
    upper limiting frequency of, 3328
  diaphragms for, transformer analogues of, 1488
  direct-radiator, enclosures for, 1510
  duo-cone, acoustic coupling diaphragms of, 21
  electrodynamic, progress in development of, 19
  focusing baffle for, 2108
  ionic, Ionophone, 896, 898, 3329, physical principles of, 897
  low- and high-power, 2701
  radiator groups, 'universal', 573
Luminescence, of alkali sulphides and sulphates, 3110
  excitation by particles, recent research on, 3441

M

Magnetic fields, axially symmetric systems for production and measurement of, 964
  in conducting liquid, stability of, 122
  of conductors in slot, and application to transformer-reactance calculation, 602, 2448
  force and torque exerted on magnetized bodies in, 1270
  of iron-clad current sheets, electrolyte-tank method of study of, 2284
  of massive rotating bodies, theory of, 1594
  measurement of, 2555
  rotationally symmetrical, vector potential of, 111
  in semi-infinite slot with semicircular end, 3071
  and torque, for ellipsoid in external field, 1271
  travelling, interaction with ionized gases, 2195
—— flux, integrating amplifier for c.r.o. recording of, 2276
—— materials, (See also Alloys; Ferromagnetic materials)
  and domain theory of ferromagnetism, 689
  sulphides of Fe, properties of, 3139
—— properties, after-effect over total hysteresis range, 2237
  of metals, theory of, 2489, 2490
Magnetism, effect of torsion on longitudinally magnetized wire, 2491, 3417
  theory of diffusion after-effect, 3072
Magnetization, discontinuities in, mechanism of, 1272
  spontaneous, of Mg ferrite and Mg ferrite-aluminate powders at low temperatures, 3120
  of steels, in weak magnetic fields, 1332
Magnetometers, electronic, developments in, 1657
Magneto-optics, of electron gas with guided waves, 912, (C)913, 914
Magnetoresistance, anomalous, of Bi at low temperatures, 1629
Magnetostriction, of Fe/Si-alloy single crystals, 1012
  of ferrites oriented while hot, 2534
  linear, of Ni alloys, 1331
  of prolate spheroids, analysis of and experimental results on, 1929
  in rotating field, 384
Magnets, design of, use of current sheets in, 2247
  permanent, air-gap field of, 963
    determination of maximum air-gap field of, 3461
    determination of optimum working point of, 3462
    modern, and applications, 3152
    for spectrographs and nuclear physics research, 3480
    made of ultrafine iron powder, 3151
Manometer, differential, sensitive, 1022
Mathematics, algebraic equations, solution on EDSAC, 3155
  Bessel functions, simple method of evaluation of, 2892, (C)3554
  boundary-value problems, solution by means of elliptic partial differential equations, 3153
  differential equations, partial, various, solutions and tables for, 718
  eigenvalue problems, relaxation method for, 1353
  exponential integral and error function, approximate expressions for, 2252
  Fourier integral, series expansion of, 433
  functions, epicycloidal and Bessel, 1944
  Green's function, one-sided, properties and application of, 711
  Heaviside operators, time-dependent, 432
  impulse integral and Duhamel step integral, 1852
  integral $\int e^{b(x + a\cos x)}\,dx$, solution for, 431
  interpolation theorem and aleatory functions, 2837
  Laplace and Helmholtz equations, separability conditions for, 3482
  Laplace transformations and boundary-value problems, 712
  logarithmic-complex-number plane and complex-number calculator, 1355
  matrices, application in circuit theory, 68, 617, 936, 1228
    application to quadripole-network problems, 617
    for quadripole networks, transformation of, 68
  matrix theory, application to valve circuits, 2744
  methods for solution of potential-distribution problems, 182
  perturbation functions, and application in electron optics, 1997
  probability, generalization of random-walk problem, and Brownian motion, 3052
  quaternions, use in theory of chains of quadripoles, 3374
  relaxation methods in solution of boundary-value potential problems, 1357
  tensors, third and fourth orders, transformation of, 710
  transform methods, and filter theory, 2750
  vectors, probability distribution of phase of resultant of constant vector and Rayleigh-distribution vector, 2251
  wave vectors, theory and applications of, 2250
Measurements, (See also individual subjects)
  a.c., null indicators for, 1660
  apparatus, electrical, sensitivity of, 198
  h.f., survey of techniques for, 1954, 3163
  microwave, inductive probe for, 1958
  of voltage s.w.r., directional-coupler errors in, 582
Metallization, of surfaces by evaporation in vacuo, 1334
Meteors, plasma oscillations in trails, 655
  sporadic, velocity distribution of, 1899
  summer daytime streams of 1949 and 1950, 385, 386, 387
  trail echoes, characteristics of, 2493
    frequency dependence of duration of, 1592
    rate variation with radar-system parameters, 995
    theory of, 2208
Meters, a.c., rectifier-type, r.m.s., principles of, 339, 1217
  admittance, 0·1–10 Mc/s, 2556
  energy-flux, for cm waves, 998
  frequency-deviation, 2856
  hysteresis, for measurements on pulse-transformer laminations, 197
  for mains-voltage harmonics, 731
  moving-coil, 444
    standard, A.E.G., 735
  rectifier-type, scale-overlap and frequency errors in, 2279
  resistance and conductance, electronic, 2853
Microphones, absolute calibration of, 2690
  capacitor, input resistance of, 18
    for N.W.D.R. studios, 893
    sensitivity measurement by reactance-valve method, (C)894
    simplified reciprocity calibration of, 3312
Microscopes, (See also Electron microscope)
  proton, first results with, 2002
Microwaves, (See also Measurements; Wave propagation, e.m.)
  photographic field-display for, 3
  use in medical and biological research, 2292
Miniaturization, techniques for, 1549, 2754
Mixers, gain-stability improvement by application of negative feedback, 2018
  parallel-T networks for, 1537
  Type-6BN6 valves as, 794
Modulation, comparison of f.m. and a.m., 1103
  frequency, by means of capacitor with controlled charging time, 2067
    by means of reactance-valve circuits, characteristics of, 535, for large frequency deviations, 1462
    of transmitters by means of premagnetized h.f. iron-cored coil, 536
  grid, Taylor and Terman-Woodyard systems of, 1464
  meter, with logarithmic scale, 200, 2859
  product-phase, and demodulation, (C)264
  pulse-amplitude, conversion to pulse-duration modulation, 1526
  pulse-code, application to narrow-band transmission of teleprinter signals, 2893
    using circulated pulses, 3230
    delta, 2330, 2603
Modulators, cut-off, Cowan, with capacitor shunt, theory of, 2363
  frequency, oscillator circuits as, 283
    using quartz oscillator, 537
    using reactance-valve circuits, improved circuit for, 3266, operating conditions for, 2066
    serrasoid, 3589, operation of, 3267
  using frequency-dependent rectifiers, 282
  magnetic, for amplification of small d.c. signals, 1528
    theory of, 338, 607
  phase, microwave, travelling-wave valves as, 1463
  ring-type, third-harmonic distortion in, 1874
  for s.s.b. R/T transmitters, 2926
Monitoring, automatic, of B.B.C. programmes, 269
  by C.C.R.M. Brussels, of naval and air-service transmissions, 1038
Monitors, for a.m. broadcasting stations, 807
  automatic, for broadcast programmes, 806
    sequential and routeing, B.B.C., design of, 2034
  for f.m. transmissions, 2601
  frequency, for a.m. broadcasting transmitters, 1111
  for television waveforms, 2846
Motors, phonic, theory of operation of, 3564
Multivibrators, with capacitors between cathodes and earth, 2758
  chart for design of, 1556
  for decade frequency dividers, design of, 1557
  as test equipment, 1668

N

Navigation aids, (See also Radar)
  aerial, American plan for air-traffic control, 682
    Australian distance-measuring equipment, 1315, 2813
    Australian visual aural radio range, 1314
    automatic flight-path control, 1003
    C.A.A. v.h.f. omnirange, 1000, (C)2814
    for civil aviation, 2223, 3096
    Decca flight log, 1617, 1619, design of, 2224
    future developments in, 2037
    instrument landing systems, airborne receivers SR.14/15 and test gear for, 3098, test set for, 1685
    Marconi v.h.f. d.f. equipment, 1617
    Mullard 'telescribe' equipment, 1617
    multitrack range airborne equipment, 1618
    radar, for traffic control, at London airport, 1312, at R.A.E., Farnborough, 1313
    review of, 683
    search radar, use for Arctic flights, 1316
    straight-line-flight indicator for radar-equipped aircraft, 144
  d.f. systems, atmospheric sources of error in, 1308
  marine, cheap radio-beacon system for small ships, 3094
    requirements for, 1309, 1616
  rotating radio beacon with angle-dependent frequency, 1001
—— systems, aerial, long-range, Navaglobe, 1925
  consol, 147
  European Decca, 3436
    German network of stations, 1923
  hyperbolic, and common-wave broadcasting, similar problems of, 2515, 3437
    in Germany, 1311
    integration of German system with present Decca system, 3095
  shoran, aided layer for, 2518
Networks, (See also Circuit theory; Filters; Quadripoles)
  a.f. response of, charts for, 1539, 1540, 2745
  analysis of, Kron's matrix method for, 347
    by least-power theorems, 3370
  block-diagram transformation of, 1534
  branched, reduction of, and its application, 937
  delay, with continuously variable delay, 2142
    with maximally-flat characteristics, applications of, 3375
    rise time of, 2143
  design of, approximations in, 3371
  double-T, for R, L or C measurements at h.f., 724
  equivalent, for transcendental impedance functions, 2139
  feedback, minimum-phase, properties of, 1536
  general stability criterion for, 334
  generalized matrix theory of, (C)2151
  impedance of, tensor analysis of, 1859
  iterated, and application to differentiators, 2457
  ladder, for h.v. impulse measurements, 2267
    low-pass shunt-capacitance, effect of parameter variation on resonance frequency, 66
    RC, for specified transfer ratio, 348, synthesis of, 2144, transfer function of, 350
  lattice, symmetrical, 'non-canonical', theory of, 3378
  linear, characteristics of, square-wave determination of, 209
    frequency characteristics of, measurement of, 210
    general theory of transmission in, 1225, 3028
    initial excitation of, 934
    with time-variable lumped parameters, 1538
    varying-parameter, correlation functions and power spectra of, 1229
  matching, T, Π and L, design charts for, 322
  noise factor of, 2140
  nonlinear, with reactance, general theorems for, 1227
    with resistance, general theorems for, 1228
  operator, positive-feedback, 3372
  parallel-T, as mixers, 1537
  parameters of, determination of, 938
  passive, 2n-pole, synthesis of, 1547
  Π and T, transfer impedance of, 939
  quadripole, chain arrangements of, use of quaternions in theory of, 3374
    f.m., dynamic transfer coefficient of, 349
    linear, active, image impedance of, 2458, f.m. signals in, theory of, 3049, matrix transformation for, 68
    matrix analysis of, 936, conditions of validity of, 1228
    passive, analysis of, 1858, gyrator, 2459
    problems of, application of matrices to, 617
    theory of, 3030
    transients in, analysis of, 2146
  RC, coupling chart for phase shift and attenuation of, 3021
    as filters, 1542
    synthesis of, (D)2456
    2-terminal-pair, transfer function of, 3369
  reactance, a.f. response of, charts for, 1539, 1540, 2746
  realizability of, introduction to theory of, 2138, 2455
  separating, for operation of dm-wave transmitters or receivers on one aerial, 3036
    with series-resonance circuits, as blocking elements, 2463
  shunt-reactance, synthesis of, 3368
  synthesis of, by means of Tchebycheff polynomials, 2742
    by use of potential analogues, 3024
  T and double-T, applications of, 3032
  theorem for, 1535
  theory of, approximation method for functions with prescribed characteristics, 2461
    conditions for monotonic transient response, 618
    Hilbert transforms and Bayard-Bode relations, 1230
    one-sided Green's function in, 711
    practical realization of positive reactance functions, 3366
    for time-variable linear systems, 3022
  variable-delay, operational analysis of, 2460
  varying-parameter, n-mesh, oscillations in, 2470
  90°-phase-shift, cascade connection of, 1861
  6-pole and higher-order-multipole, equivalent circuits for, 355
  2-terminal, consisting of reactively connected valves, 3025
Noise, (See also Acoustics; Cosmic radiation, r.f.; Generators, noise; Solar radiation, r.f.)
  abatement, in offices of Administration française des P.T.T., 1816
  acoustic, repeated bursts of, sensitivity to intensity differences of, 1503, threshold and loudness of, 1502
    survey of measurement methods and apparatus, 2969
    white, measurement of loudness of, 1501
  background, effect on frequency of valve oscillators, 2486
    statistics of, 796
  characteristics of, 3161
  in crystal rectifiers, theory of, 3592
  flicker effect in carbon-film resistors, 341
  fluctuation, analysis of groups of peaks of, 1420
    analysis of voltage peaks of, 1419
    in electron beams without transverse magnetic field, 2397
    in transistors, 870, 2928
    valve-voltmeter measurement of, 189
  in photomultipliers, measurement of, 3593
  in photosensitive semiconductors, sources of, 1934
  in polymer-dielectric films, 3478
  random, low-frequency, generation and measurement of, 1030
    rate of occurrence of peaks in, 1766
  resistance fluctuations and flicker effect, mechanism of, 1253
  r.f., in d.c. gas discharge, 1891
    due to ionospheric thermal radiation, 406
    low-power, equipment for measurement of, 2560
    narrow-band, power spectrum after passage through nonlinear impedor, 1095
    random, theory of, 1096
    from solar flares and sunspots, 2212
  samples, criteria for evaluation of, 3542
  in semiconductors, due to passage of current, directional differences of, 2527
    theory of, 1325
  shot, in electron beams, space-charge smoothing of, 2396
    in Ge single crystals, 1936
  sonic and ultrasonic, in engineering and aviation, 2102
  source, u.h.f., gas discharge as, 185
  thermal and shot, in conductors and valves, 2174
  ultrasonic, from aircraft engines, and its physiological effects, 1496
    high-level, biological effect of, 2416
  valve, direct-reading instrument for, 1967
  valve-grid, induced, and noise factor, 559

O

Optical levers, with photoelectric amplifiers, design of, 201
Oscillations, in circuit with periodically varying capacitance, 76
  forced, due to periodic e.m.f. of arbitrary waveform, 77
    subharmonic, 1571, in circuits including iron-core reactors, 2155
  locked, in circuits with nonlinear resistors, 75
  in n-mesh networks with varying parameters, 2470
  nonlinear, periodic solutions for, numerical calculation of, 3154
  plasma, in double-electron-beam system, 104
  sawtooth, analysis of, 630
  in systems with delayed action, 3040
Oscillators, (See also Generators)
  a.f., electron-coupled, giving several harmonic frequencies, 3044
    frequency-sweep, wide-range, 380
    for room-acoustics measurements, 1382
  beat-frequency, a.f., theory of mixing in, 2475
    and their constancy, 80
    distortion in, 1552
  blocking, control of amplitude of, 1551
    in television-receiver deflection systems, 2061
  build-up process in, 2161
  decade, precision, 1 c/s–100-kc/s, 3512
  frequency-sweep, 20–1000-Mc/s, 1056
  with high frequency-stability, circuits for, 2734
  LC, synchronization of, 1868
  locked, action and applications of, 2474
    frequency spectrum of, 3043
  magnetostriction, hysteresis losses in, 303
  magnetron, modulated, frequency control by resonant injection system, 2733
  master, for f.m. u.s.w. broadcasting transmitter, 2647
  nonlinear, extension of Nyquist's theory to, 335
  phase-shift, incorporating amplidyne generator, 1553
    L-C-R, 3382
    variable frequency, 359
  piezoelectric, characteristics of various types of, 3304
  quartz crystal, a.f., characteristics of, (A)2472, 3378
  R-C, a.f., 1370
    balanced, 0·1–20-c/s, 82
    sine-wave, (D)3381
  RC and RL, theory of, 1867

  - RC-bridge-type. wide-range, **81**, **(C)1889**
  - retarding-field type, **2390**
    - for 8–15 kMc/s, **2948**
  - u.h.f., triode, with series-tuned circuit, **3046**
  - ultrasonic, magnetostriction, laminated, theory and design of, **392**
  - valve, effect of background noise, on amplitude of, **2162**, on frequency of, **2163**, **2486**

P

- **Particle accelerators**, beam-current indicator and integrator for, **1039**
  - betatron, air-cored, coil system for, **2566**
    - and applications, **1995**
    - 31-MeV, medical applications and shielding of, **1996**, at Zürich radiological institute, **1993**, **1994**
  - bevatron, power plant for, **3198**
  - cyclotron, at Birmingham University, **2568**
    - f.m., dee-bias system for, **762**
    - with poles 225 cm diameter, at Stockholm, **2567**
  - e.s., practical applications of, **1069**
  - linear, axial motion of electrons in, **3518**
    - dynamics of, **3201**
    - for electrons, cavity field-strength measurement for, **2264**, M.I.T., **2295**, particle dynamics for, **2296**, as pulsed neutron source, **1388**, waveguide-type, **2294**, at Yale, **220**, 1-MeV, **1068**, 6-MeV, **221**
    - for ions, e.m. field in, **3199**, numerical calculation of, **3200**
    - for protons, helix as, **1694**
  - synchrocyclotron, at Amsterdam, electromagnet for, **223**
    - r.f. units for, **1070**
  - synchrotron, betatron-started, r.f. requirements of, **222**
    - with straight sections, forced betatron oscillation in, **761**
- **Pendulum**, a.c.-maintained, theory of, **1257**
- **Permeameters**, developments and simplifications in, **3499**
- **Phase** changer, waveguide, adjustable, errors in, **2711**
  - inverter, split-load, analysis of, **1848**
  - measurement, h.f., with direct indication, curve tracers for, **1980**
  - meters, **2273**
    - direct-reading, using c.r. tube, **2857**, **(D)2858**
    - l.f., precision calibrator for, **1981**
    - simple, for 100 c/s–25 kc/s, **3510**
- **Phosphorescence**, theory of, **1880**
- **Phosphors**, $CaSO_4$-Mn, properties under ultraviolet excitation, **153**
  - $CaSiO_3$, optical properties of, **3109**
  - $CaWO_4$ and ZnO, decay of luminescence of, **3442**
  - CdI_2-$Pb(NO_3)_2$, **1320**
  - CdS, photoconductivity and luminescence of, **151**
  - for c.r. tubes, recent developments in, **686**
    - R.T.M.A., standard, review of characteristics of, **1931**
  - crystal, physics of, **3054**
  - developments in, review of, **1623**
  - with Fe, Ni or Co poison centres, electron levels in, **2232**
  - K and Na halides, activation susceptibility of, **1318**
  - radiationless transitions of electrons in, **1260**
  - transfer and transport of energy by resonance processes in, **1882**
  - ZnS, electron penetration and scattering in, **152**
    - electron traps in, **3440**
    - photoconductivity and luminescence of, **150**
    - and theory of oxidic semiconductors, **1625**
  - ZnS-Ag and 9ZnS.CdS-Cu, size effects in luminescence of, **1319**
  - ZnS-Cu, inhibiting action of Fe on luminescence of, **421**
  - ZnS-Cu single crystals, electroluminescence of, **3439**
  - (Zn : Cd)S, induced conductivity and light emission of, **3438**
- **Photocells**, applications of, control of ion source of e.s. particle-accelerator, **1066**
    - device for scanning curves, **1992**
  - barrier-layer, relations for, and derived theory, **1147**
    - Se, response of, theory of, **3273**
  - CdS, properties of, **1770**
  - CdSe, properties of, **1148**, **1149**
  - composite cathodes for, photoconductivity of, **859**
  - Cs-Sb, properties at temperatures down to − 196°C, **2070**
  - electron-multiplier, E.M.I., nonlinear amplification in, **3272**
    - measurement of fluctuations in, **3593**
    - 'mosaic'-type, as magnetic-field indicators, **894**
    - polarization effects in, **3270**
    - pulsed operation of, **3209**
    - R.C.A. 5819, production testing of, **3271**
    - for ultraviolet range down to 1450 Å, **2369**
    - for ultraviolet range down to 1500 Å, using Cu-Be alloy, **3594**
    - use of image converter for extending wavelength range of, **1067**
  - Ge, electrical characteristics of, **1468**
    - large-area, **2656**
  - ion-bombarded Si, properties of, **2929**
  - PbS, impedance measurements on, **3595**
    - properties and applications of, **3596**
    - single-crystal, single-contact, **2654**
  - PbS and CdS, for amplification of light-intensity fluctuations, **3196**
  - PbSe, long-wave limit of, **1771**
  - PbTe, single-crystal, single-contact, **2655**
  - Se, improvements in, **540**
    - and Se rectifiers, effect of Hg vapour on, **3474**
  - tabulated data of available types, **2395**
- **Photoconductivity**, in amorphous Se, **1006**
  - of BaO, **149**
  - of BaO single crystals, **148**

  - delay unit, for radar ranging, **331**
  - detection near noise threshold, **1307**
  - discrimination by means of delay lines, **2129**
  - frequency-spectrum analysis for nonrecurrent groups of, **1721**
  - mixing unit for, **1523**
  - mμs, techniques and measurement circuits for, **2730**
  - periodic, h.f., measurement of peak power of, **733**
    - h.f. and l.f., measurement of peak voltage of, **1955**
  - reproduction of, **3007**
  - sharpening circuit for, **2476**
  - technique of, definitions of terms for, 52 IRE 20 S1 standard on, part 2, [illegible]
    - vocabulary of French terms used in, **2672**
  - transmission-line inverter for, **3361**

Q

- ***Q* factor**, measurement of, for microwave cavity resonator, by means of calibrated h.f. circuit, **1960**, methods for, **3496**
  - meter, based on damped free oscillations, **1676**
- **Quadripoles**, (See also Networks)
  - electromechanical, linear, theory of, **621**
  - graphical study of, at constant frequency, **935**
  - gyrator, microwave, using Faraday effect in ferrites, **1233**
  - nonreversible, equivalent circuits of, **3031**
- **Quantum theory**, of fields, mathematical aspects of, **644**
- **Quartz** crystals, determination of parameters of, **2549**, **3160**, at 10–180 Mc/s, **1379**
    - forced vibrations of, **2156**
    - growth of twinning under stress, **705**
    - h.f., deposition of electrodes on, vacuum technique for, **1943**, for primary frequency standards, **3481**
    - HT-cut, with zero temperature coefficient, **1641**
    - manufacture of, **175**
    - resonance curve of, circle-diagram method for plotting, **2550**
    - resonators, effect of heat treatment on, **3144**, frequency variation with high pressure, **1350**, measurement of electrical constants of, **722**, for range 1 kc/s–40 Mc/s, British Post Office types, **1239**, thickness-shear-mode, using circular bevelled plates, **2544**, ultrasonic, power measurements on, **734**
    - safe current for, **2757**
    - temperature variation of h.f. dielectric constant at 20° to 700°C, **2831**
    - thermal twinning and mechanical detwinning of, **2831**
    - X-cut, free from harmonics, **430**

R

- **Radar**, (See also Navigation aids)
  - anticollision, for high-speed commercial aircraft, **2815**
  - British development of, **1609**
  - c.w., circular polarization for, **2811**
  - display, narrow-band relay transmission system for, **1921**, **3430**
  - distance measurement by, **1611**, **2810**
  - echo and noise in system subjected to deliberate interference, **3090**
  - echoes, from precipitation, 'bright band' in, **680**
    - from rain, **681**, **1612**
    - from snow, observations at 3-cm λ, **1613**
    - from sun and planets, possibility of, **2513**
  - echoing areas of targets, measurement technique for, **2512**
  - equipment, instructional, **2220**
    - for R.A.F., engineering of, **3091**
  - G.C.A. blind-landing system, **145**, **146**
  - in Germany, prewar and war-time developments of, **1306**
  - ground clutter, fluctuations of, **(A)2514**, **3435**
  - ground equipment, **994**
  - lightning detection by, **1614**
  - marine, commercial, British, **1924**
    - for merchant ships, modern developments in, **3089**
  - port equipment, Decca, **1310**
    - at IJmuiden, **3432**, indicator equipment for, **3433**, transmitter and receiver for, **3434**
    - at Le Havre, **2222**
    - survey of requirements for, **3431**
  - range, application of noise statistics to prediction of, **(D)2221**
  - receivers, use of information theory in design of, **993**
  - rotating-horn 'organ-pipe' scanner for, **1920**
  - transponders, miniature, for aircraft, **418**, for guided missiles, **2225**
    - and their special circuits, **1922**
- **Radiation**, (See also Aerials)
  - e.m., problems of, application of compensation theorem to, **591**
    - produced by electron collisions in strongly ionized medium, **2780**
  - field, of two radiators, representation by constant-phase and constant-amplitude curves, **1201**
  - from multipoles, theory of, **965**
- **Radio** communication, transatlantic, 50th anniversary of, **2023**
  - pictorial, history of development of, **2219**
  - progress, I.R.E. review for 1951, **2404**
- —— **links**, (See also Communication systems; Radiotelephony; Relay systems; Television)
  - design fundamentals for, **3234**
  - design of radiotelegraph receiving system for, **2017**
  - dm-λ, with 'master and slave' frequency control, **1732**
  - dm-λ and cm-λ, and C.C.I.F. requirements, **2896**
    - planning of, **1431**
  - f.m., u.s.w., multichannel, nonlinear crosstalk in, **1429**
    - 50-Mc/s, **2614**
    - 70–88-Mc/s, multichannel, in Colombia, **1430**
  - general technical considerations for, **2028**
  - m-λ, beyond optical range, calculations for, **1410**
  - microwave, for Bonneville power system, **3236**
    - f.m., use of klystrons in, **2895**
  - multichannel, from Athens to Rome and Crete, **2607**
  - multiplex, evaluation of signal/noise ratio for, **2608**
  - p.a.m., short-distance, **2029**
  - planning of, **260**
    - for German telephone and television network, **2033**
  - for power stations, **2031**
  - for telecommunications, **2610**
  - for telephony, **2611**
    - Dijon-Strasbourg, **2612**, equipment for, **2613**
    - in Jutland, **1106**
    - Turin-Piacenza, **803**
  - use of travelling-wave valves in, **2894**
  - u.s.w., transportable equipment for, **2032**
  - for widely separated coincidence counters, **1734**
- **Radiotelegraphy**, multiplex pulse systems for, **3232**
  - teletype, application of transmitter diversity in, **799**
- **Radiotelephony**, (See also Communication systems; Radio links; Relay systems)
  - equipment, portable, for ship-to-port communication, **3553**, transmitter-receiver, Type SUF-21K, 30–50-Mc/s, **2398**
    - v.h.f., mobile, a.m. and f.m., **262**, mobile, conditions for development in France, **263**, single-channel, subscriber-type, **492**
  - multichannel, on v.h.f. radio links, **3233**
  - multiplex, f.m., echo distortion in, **2022**
  - signals, spectrographic investigation of, **742**
    - for trains, in U.S.A., **261**
- **Reactors**, saturable, as r.f. remote-tuning elements, **3394**
    - series-connected, with high-impedance control source, **3015**
    - transient eddy-current phenomena in, **1220**
- **Receivers**, (See also Television; Radar)
  - a.m., superheterodyne, pulse response of, **1418**
  - battery-operated, French Standard C92-120 on, **3221**
  - broadcasting, four, proposed tests for, **1984**, v.h.f., without limiter and discriminator, **1733**
    - using Ge triodes, **1115**
    - ionodyne, for use with ionophone loudspeaker, **1094**
    - pretuned, 4-station, **1091**
    - tuned r.f., **1092**
    - 12-years' progress in design of, **2877**
  - combined, for radio and television, **1090**
  - communication, flexible selectivity for, **2015**
    - s.s.b., Marconi, Types HR92 and HR93, **2878**
  - d.f., matched-channel, component selection for, **999**
  - directional methods for enhancing resolution in, **790**
  - for dm and cm waves, with diode mixers, sensitivity of, **1719**
  - double-superheterodyne, for use in transmitter-frequency measurements, **2858**
  - f.m., analysis of two-circuit band-pass filter in Riegger discriminator, **2321**
    - communication, selectivity tests for, **745**, **(C)1985**
    - for 90-Mc/s band, **1093**, modification of, **2589**
  - performance of, systematic analysis of, **252**
  - pulse, comparison of amplifier circuits for, **(C)364**
  - superheterodyne, alignment of, approximate formulae for, **3540**
    - diagrams for ganging calculations for, **53**
    - i.f. stage design for, **2019**
    - impulse response of, operational analysis of, **(A)2879**
    - for pulse reception, **481**
    - tracking problem in, **2323**
    - tracking of, **482**, **1417**
  - s.w., commercial, **251**
  - 26-Mc/s, for station reception of programmes from remote transmitter, **480**
  - 460-Mc/s, design of, **793**
- **Reception**, (See also Field strength; Television; Wave propagation, e.m.)
  - broadcasting, volume control for fidelity in, **486**
  - in France, of world broadcasts, **3228**
  - of overseas broadcasts on medium waves, **256**
  - of periodic signals in noise, application of correlation analysis to, **(D)479**
  - of signals in noise, **1718**
    - electronic correlator for, **248**
    - theory of, **2322**
  - of transatlantic signals of frequencies near 30 Mc/s, **1086**
  - and transmission, common-aerial, of circularly polarized microwaves, **281**, of v.h.f. waves, **538**
- **Recorders**, (See also Sound recorders)
  - for atmospheric potential gradient and air-earth current, **1028**
  - circle-diagram, for a.f. range, **740**
  - c.r.o. equipment for h.f. response curves, **3509**
  - digital, electronic, SETAR, for serial events, **2310**
  - ionosphere, automatic, C.R.P.L., **1918**
    - panoramic, 16-kW, 1–20-Mc/s, **719**
    - 5–10-Mc/s, design of, **3064**
  - for scaling units, **3524**
  - waveform, automatic, for atmospherics, **679**
    - magnetic-tape, boundary-displacement, **1963**
- **Recording**, (See also Sound recording)
  - magnetic system, 'ferrography', **1705**
  - magnetic-tape, of e.s. field changes, **190**
- **Rectification**, of a.c. with high modulation, **1744**
  - contact, with molybdenite and tungstenite, **3147**
    - between semiconductors of same type, theory of, **494**
    - with Te, **3131**
  - diffusion theory of, **3402**
  - effects with natural and sulphurized galena, **3473**
  - at surfaces of Ge and PbS crystals, **1635**
  - volume, in zincite crystals, **158**
- **Rectifiers**, (See also Transistors; Valves, crystal)
  - barrier-layer, **1939**
    - general theory of, **3472**
    - temperature effect on barrier height and breakdown voltage of, **706**
  - cold-cathode, h.v., Hg-vapour, with magnetic field, **2927**
  - crystal, temperature-dependence of characteristics of, **1645**
  - Cu_2O, deviation from Ohm's law at anode surface of, **2043**
    - resistance stratification in, **271**, **272**
    - theory of, **1121**
  - dry, voltage drop and backward current in, **187**
  - electrolytic and barrier-layer, unforming of, **2042**
  - Ge, G-10 dot type, for radio power supplies, **3241**
  - half-wave, with capacitive smoothing, analysis for, **1745**
  - quadripole equivalent of, 'transrector', **1120**
  - Se, breakdown in, **3568**
    - characteristics of, **2340**
    - creep phenomena in, **2044**, **2832**
    - recovery after backward voltage pulse, **813**
    - reversible changes in boundary layer of, **1642**
    - and Se photocells, effect of Hg vapour on, **3474**
    - Siemens, characteristics of, **3363**, and design of transformers and chokes for, **503**
    - static and dynamic characteristics of, **3242**
    - use in computing and control circuits, **3017**
  - Se and Cu_2O, d.c. resistance at 79°–300°K, **2621**
  - Se-disk, effect of bending of, **2622**
  - Si and Ge, theory of noise in, **3592**
  - surface-layer, h.f. properties of, **3566**
  - thyratron, use in broadcasting transmitters, **3569**
  - TiO_2, development at N.B.S., **3567**
- **Reflection**, (See also Sound; Wave propagation, e.m.; Waves)
  - acoustic, of pulse, by paraboloid, **2683**, by spherical surface, **2682**
  - coefficient, of ice and snow at 3·2-cm λ, **3494**
  - of e.m. waves, from slightly rough surfaces, **664**
    - by wire gratings, **3057**
  - ionospheric, of long waves, wave solution for, **137**
  - of 1·42-Mc/s waves, **3427**
  - of narrow ultrasonic beam, inadequacy of plane-wave theory for, [illegible]
  - total, of spherical waves, theory of ray displacement in, **2770**
    - of ultrasonic beam, lateral displacement in, **3414**
- **Reflectometer**, coaxial-line, for aerial-matching measurements, **3435**
- **Refraction**, of evanescent e.m. cm waves in waveguide, **34**
- **Refractive index**, of air and main constituents, at 24 kMc/s, **1371**
- **Refractometer**, microwave, recording, airborne, **3493**
- **Regulators**, voltage, using magnetic amplifier, **1123**
- **Relay systems**, (See also Communication systems; Radio links; Radiotelephony; Television)
  - dm-wave, IDA-22 equipment for, **1432**
  - microwave, applications for power systems, **3235**
    - Copenhagen-Skamlebaek, **1105**
    - p.m. 24-channel equipment for, **1107**
    - TD-2, **1109**, unattended repeater equipment for, **1110**
  - r.f., in Cuba, **1108**
  - u.h.f., multiplex, design calculations for, **496**
  - wide-band, review of, **265**
    - 80–300 Mc/s, design data for, **495**, **(C)2030**
- **Research**, at Army Signals Research and Development Establishment, **3622**
  - at Bernard Price Institute of Geophysical Research, 1938–1951, **992**
  - at microwave physics centre, Florence, during 1950, **881**, during 1951, **3395**
  - organization of the Royal Naval Scientific Service, **2959**
  - radio, at Cambridge University, **880**
    - Radio Research Board report for 1950, **2399**
  - scientific, by Philips' Industries, 1891–1951, **560**
  - in s.w. absorption-spectroscopy, at Oxford University, **2957**
  - telecommunications, etc., at British Post Office Research Station, **1486**
- **Resistance** coils, standard, flat spiral type, design of, **2452**
  - h.f., of metals in normal and superconducting state, **3080**
  - impulse, of earth electrodes and embedding materials, **428**
  - very high, measurement of, **726**
- **Resistivity**, of binary metallic mixtures, **3447**
- **Resistors**, carbon-film, flicker effect in, **341**
  - metal-film, **2736**

- metallized-filament type, r.f. characteristics of, 1530
- nonlinear, electronic control of, 1851
  - polaristors, colloidal suspensions and mixtures used in manufacture of, 3150, production and properties of, 2538
  - with sintered-carborundum base, 1219, 3364
- r.f., for power up to 100 kW, 2451
- SiC, industrial applications of, 2737
  - in series with impedance, (D)1529

- **Resonance,** in series and parallel circuits, 3367
- **Resonators,** acoustic, damping of, 2687
  - cavity, coupled, resonance frequencies in, 1550
    - cylindrical, with stratified dielectric, natural oscillations of, 1242
    - detection of small variations of *Q* of, 192
    - double-paraboloid, loop-excited, 2159
    - effect of circular apertures in walls of, 632
    - effect on E_{010} and E_{011} wave modes of deformation of, 1243
    - field-strength measurements in, 2265
    - rectangular, degenerate modes in, separation of, 79
    - resonance-resistance measurements at cm wavelengths, 1959
    - spheroidal, resonance frequency of, 357, with small confocal spheroid, 2160
    - surface losses in, 3042
    - with tilted end-plate, mode-conversion losses in, 1866
  - coaxial, capacitance-loaded, theory of, 358
  - Helmholtz, multiple, theory of, 3311
    - as sound absorbers in broadcasting studios, 2424
  - magnetostrictive, ferrite, 624

S

- **Sea water,** electrical properties of, 3424
- **Seals,** glass, butt and graded, theory of stresses in, (D)2249
  - sapphire/glass, 178
    - for PbTe photocells, 179
- **Semiconductors,** activation energy and impurity concentration in, 423
  - α-Fe_2O_3, 1329
  - α-Fe_2O_3 and α-Fe_2O_3-Ti, electrical properties of, 1009
  - α-Fe_2O_3 single crystals, properties of, 3125
  - apparatus for electrical measurements on, 3175
  - CdO and NiO, conduction properties of, 700
  - CdS layer in vacuum, contact potential of, effect of light on, 1627
  - Cu_2S, conductivity and Hall effect in, 2241
    - physical properties of, 2242
  - current in, partial differential equations for, 1626
  - Fe oxides, properties of, 3138
  - ferrites, Ni/Zn, dispersion of resistivity and dielectric constant of, 162
    - temperature variation of resistivity of, 1322
  - flow of holes and electrons in, partial differential equations for, 1010
  - Ge, diffusion in, of donor and acceptor elements, 2822, measurement by capacitance method, 2821, measurement by *p-n*-junction method, 3134
    - electron and hole production by α particles, 1636
    - electron-hole recombination in, 3453
    - electron mobility in, 1011
    - liquid, resistivity of, 1338
    - magnetoresistance of oriented single crystals of, 166
    - mechanisms governing properties of, 3452
    - neutron bombardment of, effect of, 163, production of hole traps by, 1637
    - *n-p-n* junction, as model for secondary photoconductivity, 1638
    - *p-n* junctions, effect of pressure and temperature on resistance of, 1324, probing of space-charge layer of, 2526
    - production from flue dust, 3136
    - rectification phenomena and transistor action in, 2234
    - single-crystal, properties of, 3135, shot noise in, 1936, Zener current across *p-n* junctions in, 164
    - thermal production of acceptors in, 2235
  - grey tin, electrical properties of thin layers of tin containing, 2829
    - magnetism of free charge-carriers in, 1321
  - influence of surface energy levels on properties of, 3401
  - internal barriers in, 377
  - mobilities in, effect of dislocations on, 3448
  - molybdenite, properties of, 3454
  - noise in, theory of, 1325
  - oxide, impurity scattering in, 2524

  magnetostrictive, for storage system of computer, 1200
  ultrasonic, Hg, folded, design of, 620, piezoelectric transducers for, 2743, vitreous-silica, performance of, 2462
  as valve components, 2375
 flat-strip, properties and applications of, 2705
 helical, e.m. wave propagation along, 112, 660
  general theory of, 1893
 heterogeneous, propagation equations for, integration conditions for, 2706
 h.v., attenuation of carrier-frequency waves due to hoar frost, 1825
 image impedance and image attenuation of, measurement of, 1961
 inhomogeneous, theory of, Fourier transforms in, 1830
 λ/4, short-circuited, equivalent circuit for, 316, input-impedance characteristics of, 2430
 Lecher-wire, matching-stub chart for, 1515
 lossy, operating parameters at dm and m λ, 3349
 measurement of group-propagation-time differences on, 1373
 as models for study of e.m. wave propagation, 2316
 with periodic structure, properties of, 3615
 phase distortion in, measurement of, 208
 radial, theory of, application to horns, 29
 RC and LG, pulse distortion in, 578
 resonant, mismatched, reactance of, 321
  radiation resistance of, 2987
 r.f., and waveguides, survey of, 1195
 single-wire, magnetically loaded, 908
 steady-state waves on, 2989
 surface-wave, corrugated, experimental investigation of, 33
  cylindrical, 579
  e.m. propagation along, 317, (D)3339
  interaction between, 3340
  single-conductor, 3338
 transients on, application of operational calculus to, 2112
 u.h.f., twisted-pair, flexible, 2113
 uniform, standard equations for, simple derivation of, 3341
 and waveguides, characteristic parameters of, 31
 2-wire, radiation resistance of, 577
Transmitter-receiver, R/T, portable, 30–50-Mc/s, Type SUF-21K, 2898
Transmitters, (See also Television)
 amateur, use of Π networks for reduction of television interference from, 2359
  10–160 Mc/s, television-interference-free, 1458
 broadcasting, a.m., delay limiter for, 539
  C.F.T.H., latest types of, 3587
  f.m., high power, (D)534
  German, list of, 499
  for international shared frequencies and new Danish f.m. stations, [illegible]
  medium-wave, 100-kW, at Kalundborg, Denmark, 1736, 150-kW, 3588
  Südwestfunk, problems of automatic operation of, 2648
  twin drive as active reserve for, 2645
  6–24 Mc/s, 40-kW, 1461
  2 x 20-kW, Ravensburg, 2644
  100-kW, Villebon, Paris, 2361
  150-kW, Daventry, remote control of, 2924
 f.m., for mobile police communications, 3265
 for m.f., h.f. and v.h.f. bands, 100-W and 150-W, 2064
 power/load curves and matching range of, 2362
 R/T, s.s.b., multichannel, LD-T2, 2065
  4–23-Mc/s, with servo-operated push-button tuning, 2922
 suppression of harmonics in, (C)2063
 s.w., for civil-aviation service, 1768
  use of overtone crystal oscillator for prevention of interference with television, 856
 v.h.f., parasitic emissions from, 3497
 8-channel, for wire-broadcasting system, 798
Transmitting station, F8REF, for transmissions to French amateurs, 3237
 radio, Italcable, at Torrenova, 1433
Tropicalization, a colonial's ideas on, 3145
 principles and methods of, 176
Troposphere, (See also Atmosphere)
 electrical conductivity of, 1289
 inversion layers in, effective height of, 476
 temperature profile in, theory of, 393

U

Ultrasonic absorption. See Absorption.
 applications, cleaning of small metal parts, 3190
  determination of properties of road materials, 3514
  flaw-detection equipment, 751
  making of holes in hard materials, 1988
  measurement of elastic constants, 3189
  thickness gauge, 455, 3513
  tyre-testing equipment, 1687
 oscillations, generation by means of magnetostrictive powders, 1183
Ultrasonics, in air, and applications, 6
 attenuation in Ni and Fe-Si single crystals, 169
 beam power measurement, 3313
 cavitation production, theory of, 1804
 energy concentration in, 3309
 magnetically induced velocity changes in multicrystal Ni, 2818
 measurements on liquids, 563, 2967
 use of phosphorescent materials as detectors in, 1810
Units, rationalized M.K.S. system, 659

V

Vacuum gauges, adsorption manometer for pressures $< 10^{-7}$ mm Hg, 2520
  ionization, calibration of, 1004, for measuring contamination time, 2229, for mounting in main pumping line, 2229, notes on, 1927
  Knudsen, description and theory of, 3101
  Knudsen-type, automatically controlled, 2817
  Penning, calibration and use of, 3102
  thermocouple micromanometer, 3103
 technique, and application in radio and electronics, 1928
  applications of ultraviolet absorption in, 419
  evaporation equipment with high pumping speed, 2240
  molecular flow in connected tubes, 684
  use of getters in, 2521
Valves, (See also Counter tubes; Discharge tubes; Transistors)
 amplifier, microwave, optimum geometry of, 2377
  penetration-factor determination for, 3285
 balitron, circuits using, 2388
 characteristics, c.r.o. comparator for, 2854
  c.r.o. display of, 1677, 1678
 cold-cathode, dekatron, single-pulse, for counters, 1787
  as switching devices, 3274
 counter, decade, ribbon-beam, for high counting rates, 3614
 crystal, diode, characteristics in mV region, 3296
  Ge-diode, effect of magnetic field on, 3604, in SEAC computer, performance data for, 2385, time lag of forward conductance of, 3282, use in indicating instruments and relays, 3283
  Ge diode and triode, characteristics and applications of, 1785
  Ge-W diode, temperature-independent, 2943
  tabulated data of available types, 2395
 diode, cylindrical, transit-time effects in, 1784
  damper, for television horizontal-deflection circuit, 551
  electron transit time in, influence of initial velocities on, 1783
  planar, electron streams in, 1164, ions and electrons with uniform initial velocities in, 2649, space charge and transit time for relativistic velocities, 2383, space-charge smoothing factor for, (D)1163, transient response of, 2386
  with plane inclined electrodes, theoretical investigation of, 2384
  potential distribution in, calculation of, 1162, and I/V_a curve for, calculation of, 2084
  potential distribution and transit time as functions of current in, 2382
  with retarding field, admittance of, 3605
 double-beam, for amplification at 3 kMc/s, 1154
 electron-beam, modulated, effect of velocity distribution in, 3289
  oscillator, upper frequency limit for, 3618
 electron-wave, theory of, 2077
 glow-discharge, voltage-regulator, mean-noise characteristics of, 2931, peak-noise characteristics of, 2930
 grid-controlled, oscillation-frequency limits of, 83
 grid current in, tests for, 1166
 for high-efficiency line-scanning circuits, 2638
 high-power, with squirrel-cage filaments, magnetron effect in, 3606
 high-transconductance, using space-charge deflection of beam, 1477
 investigation by use of radioactive isotopes, 1782
 klystron, amplifier, wide-band, 5-kW, 557
  effects of grid-mesh dimensions on performance of, 878
  equivalent circuits for, 1481
  high-power, recent developments in, 2393, for u.h.f. television, 558
  power-amplifier, Type SAL30, 2092
  recent developments in, 2090
  reflex, electron oscillation in, 879, for mm waves, 2394, operation in f.m. microwave links, 2895, space-charge effects in, 1177, Type KR142, 8·45–10·3 cm, with fixed load, 2392
  travelling-wave, duplex, 2091
  9·3-kMc/s, for transmitters of air-navigation systems, 1482
 klystron and travelling-wave, noise in, 2372
 and lamps, mass production of bulbs for, 3281
 magnetron, for a.m. transmitters, injection locking of, 3047
  as amplifiers, theory of, 2669
  axial-anode, in condition of static space charge, 877
  cut-off characteristic and potential distribution of, 2089
  in cut-off condition, experimental study of, 3620, theory of, 3619
  cylindrical, smooth-anode, instabilities in, 3293
  definitions of terms for, 52 IRE 7S1 standard on, 2671
  development in Germany up to 1945, 2951
  for dielectric heating, 3292
  with few segments, experimental study of, 2950
  f.m. of in dm-λ range, 3294
  inverted, 3621
  as microwave amplifier, 1479
  mm-wave harmonics of, 2478
  multisegment, potentials and electron paths in, 2952
  planar, theory of, 1478
  pulsed, r.f. phase control in, 2670
  split-anode, decelerating effect in, 1480
  as travelling-wave valve, 289
  whole-anode, influence of secondary emission in, 1791
  tables for f.m., 3295
 manufacture of, Brimar grid-winding lathe for, 2941
  use of rare metals in, 1150
 microphony in, measurement of, 1773
 microwave, ξ, η tables for exponential part of i_a/V_a characteristic of, 2376
  symbolism for classification of, (A)2858, 3598
 oscillators, mm-λ, review of, 2946
 oxide-cathode, characteristics of, changes of, (A)3599
  loss of emission in due to shock, 2663
  space-current changes following small current pulse in, 2078
 pentode, Types PTT 216 and 214, for wide-band amplifiers, 3288
 performance analysis for large signal voltages, (C)865
 reactance, space-charge effects in, 2947
 receiving, for electrometer use, 541
 reliable, manufacturing and testing techniques for, 1776
 reliability of, J.E.T.E.C. report on, 863
 resnatron, reflex, for u.h.f. television, 3617
  u.h.f., new designs and applications of, 555
 retarding-field, experimental investigation of theory of, 2949
 secondary emission, with MgO emitters, 3003
 for Services, quality and reliability standards for, 1777
 switching, ribbon-beam, 1789, principles and applications of, 2389
 tetrode, beam, power, I/V characteristics of, 3611

space-charge and ion-trapping effects in, **1170**
transmitting, effect of electron transit-time on efficiency of, **3612**
thyratron, deionization time of, statistical and physical concepts of, **2387**
grid-voltage peak in, **875**
high-current, Type GL-5855, **874**
initial conduction interval in, **3608**
as relays, **929**
transmitting, heat-transfer data for, **1774**
high-power, cooling by vaporization of water, **542, 2074,** use of Th-W filaments in, **2660**
large, water jacket for, **1473**
travelling-wave, delay lines in, theory of, **2375**
effect of electron-velocity spread on gain and noise figure of, **1151, 2934**
electronic wave attenuation in, **545**
gain calculations for, **544**
with helix, optimum amplification in, **2374**
internal-feedback, **2373**
magnetron as, **289**
miniature, **866**
noise figure of, **543, 546, 1470,** calculation of, **3276, 3597**
noise and gain measurements on, **1152**
periodic-waveguide, medium-power, **1153**
as phase modulators and frequency changers, **1463**
for radio beam links, **2894, 2935**
without retarding line, **2075**
spatial-harmonic, for 6-mm λ, **547**
theory of, **106**
Type M8, impedance matching to waveguide, **2940**
Types M8 and M11, electron guns for, **2938,** impedance matching to coaxial lines, **2939,** measurements and characteristics for, **2937,** technical development of, **2936**
oscillator, u.h.f., wide-band, **3616**
travelling-wave-type, with wide-band interdigital delay structures, [redacted]
triode, crystal, **1167**
disk-seal, transit-time oscillations in, **2664**
inverted, properties and applications of, **2263**
microwave, amplification factor of, **3287**
planar, calculation of families of characteristics for, **3609,** effective grid potential and cathode current density of, **2085,** transconductance calculation from theory of potential, [redacted]
planar and cylindrical, penetration factor of, **1474**
transit-time reduction in, **871**
transmitting, high-power, h.f., Type-F-5918, manufacture of, **1169**
Type-ML5681, for 50-kW output up to 110 Mc/s, **3610**
u.h.f., cylindrical, amplification factor of, **3607,** planar, amplification factor of, **552**
for 100–420 Mc/s, **2086**
triode and tetrode, for coaxial-cable system, **1165**
power, u.h.f., **3286**
u.h.f., review of, **3291**
v.m., space-charge waves on retarded stream in, **2666**
variation of h.f. power with d.c. power, **2391**
for 100-1000 W continuous output, **2953**
Vibrations, forced, nonlinear, theory of, **1881**
of rods, damping by surrounding medium, **615**
Voltage divider, capacitive, wide-range, **1974**
potentiometer measurement of, errors in, **203**
Voltmeters, a.c., a.f., frequency compensation of, **202**
differential, using temperature-limited diode, **3501**
diode, response to randomly recurrent impulses, **736, (C)1670, 1973**
indicating, discrete-digit, 'anodige', **3178**
'Stromdämmung'; German term for 'ohms per volt', **1375**
valve, without calibration drift, **1041, 1376**
double-diode rectifier circuit for, **1671**
r.m.s., **3502**
slideback and infinite-impedance types of, **1672**
Type-TVL25, 3 V–30 kV, **3503**
Volume compression, automatic, electronic, **2152**

W

Wattmeters, electronic, for ranges 0–71 kc/s and 0·50 W, **1982**
Wave mechanics, relativistic relations between wave parameters, **2766**
Wave propagation, acoustic, (See also Sound)
and concept of group velocity, **2179**
in duct with constrictions, **1492**
in ducts coupled end to end, analysis of, **1258**
in medium with very small random variations of refractive index, **885**
of spherical compressional waves in solids, **2410**
in 3-layered liquid half-space, **1490**
acoustic and e.m., directive, correlation function in analysis of, **882**
scattering by two or more parallel cylinders, **2685**
Wave propagation, e.m., (See also Field strength; Reception; Television: Transmission lines; Waveguides; Waves)
in anisotropic media, **2007**
anomalous, in 1–10-m band, **1409, (C)2012**
in artificial dielectrics, effect of magnetic field on, **1587**
in atmospheric duct, **1402**
attenuation due to scattering, **(D)1716**
characteristic impedance of free space, **3419**
cm-λ, in northern France, **3218**
in optical range, **789**
concept of group velocity in, **3420**
in conical horn, laws of, **3356**
in cylindrical waveguides, theory of, **320, 915**
in dielectric plates, cut-off frequency for, **1895**
from dipole over earth's surface, **467**
of discontinuities in e.m. field, **1709**
over earth's surface, analysis of, **591**
fade-out statistics for 1949, **1087**
fading, on clear nights, of microwaves, **1413**
rapid variations of s.w. signals, **1088**
of 50-Mc/s signals reflected from aurora borealis, **2876**
of 3-cm waves over 10·6-mile sea path, **1717**
field-strength measurements, near land/sea boundary, **2013**
of WWV 10-Mc/s signals at Turin, **477**
at 412 Mc/s, **788**
forecasts, for N. Pacific and Alaskan areas, **2573**
ground wave, analysis of, **777**
along helical conductor, **112**
in heterogeneous layers, **2312**
beyond horizon, in range 40 Mc/s–4 kMc/s, **3216**
over horizontally stratified earth, **1585**
'internal' reflection in stratified medium, **236**
ionospheric, cross-modulation in, **474**
and in crystals, double refraction in, **2868**
effects of solar eclipse on, **2575**
field-strength calculations for reflected waves, **2318**
forecasts, comparison with observations, **(D)2574**
at frequencies near 100 kc/s, over distances up to 1000 km, **(A)2578, 3534,** over short distances, **(A)2577, 3533**
group velocities and group heights from magneto-ionic theory, **1405, (C)2009**
gyro-interaction in, **785, 2011,** experimental determination of resonance curve in, **2010,** resonance in, **3214**
and gyro-interaction, investigation by means of models, **470**
influence of geomagnetic field on, **781**
at oblique incidence, **472,** and Lorentz polarization term, **1302,** of km waves, **2873**
path analysis for, **1083**
path calculation for, **782**
phase path determination for, **2315**
II wave and coupling factor in theory of, **1403**
predictions, by Spanish method, **3536,** of optimum working frequencies for any range, **1404**
production of harmonics at points of zero dielectric constant, **1081**
solution for reflected long waves, **137**
and space-wave reception, **780**
time-delay measurements at medium frequencies, **473, (D)1714**
at vertical incidence, theory of, **243**
v.h.f., long-distance, **2581**
over irregular surface, integral-equation solution for, **2311**
jumps in discontinuous solutions of wave equation, **1708**
from land to sea and vice versa, **1711**
lateral deflection of waves reflected by inhomogeneous layer, **244**
l.f., effect of ionospheric storms on, **246**
in lower atmosphere, average ray refraction in, **2576**
magneto-ionic theory, matrix and tensor form of fundamental relations of, **3416**
wave polarization chart for, **2572**
microwave, asymptotic solutions of differential equation in theory of **1710**
m-λ, beyond horizon, and atmospheric conditions, **241, 242**
behind a mountain, **3531**
between New York and Amsterdam, correlation with geomagnetic activity, **3213**
in nonhomogeneous atmosphere, theory of, **661**
oblique-incidence measurements over 1150-km path, **3530**
phase and group paths of waves returned from E layer, **397**
phase variations of c.w. signals in 70–130-kc/s band, **2583**
as a function of distance, **2582**
polar blackouts recorded at Kiruna observatory, **783**
polarization, of l.f. ionosphere echoes, **2874, 2875**
of 3·6-Mc/s ionosphere echoes, **2867**
problems of, application of compensation theorem to, **591**
reflection, in slightly inhomogeneous layers, **2006**
via triangular path, **2314**
round-the-world signals, **3535**
scatter-sounding methods of prediction of h.f. transmission, **2579**
over sea path, at 33 Mc/s, **787**
Sommerfeld's surface wave, **468, 469**
source of long-distance backscatter in, **1082**
along surface of dielectric-coated conductor, **30**
along surface of dielectric cylinder surrounded by dielectric, **662**
s.w., and effect of planetary configurations, **3212**
ionospheric, effect of geomagnetic field on, **778**
transatlantic, variation of angle of arrival with phase of sunspot cycle, **475**
WWV forecasts for, **3215**
transient, in conducting medium, **1586**
transmission-line models for study of, **2316**
tropospheric, beyond horizon, **1408**
theory of scattering in, measurement of parameters involved in, **1411**
u.s.w., abnormal ranges and their meteorological causes, **2580**
effective height of troposphere inversion layers in, **476**
and meteorological influences, **3217**
v.h.f., **1712, 1736**
via sporadic-E clouds, **1084**
wave packets, Poynting vector, and energy flow in, **1274**
at 16 kc/s, explanation in terms of two layers below E layer, **2804**
over distances of 200 km, **2870**
over distances of 540 km, **2871**
at 30–100 Mc/s, **1085**
at 4 kMc/s, pulse investigation of, **1414**
in 5-m waveband, statistics for ranges beyond optical limits, **2319**
Waveform, (See also Analysis)
analysis, using autocorrelation functions, **797**
for odd harmonics up to eleventh, **1374**
recording, magnetic, boundary-displacement, **1963**
television, display unit for, **447, 741**
Waveguides, branch connection of, **909**
with capacitive pins, as microwave λ/4 plate, **3348**
circular-section, inhomogeneous, e.m. waves on, **1831**
with many beams, theory of space-charge waves in, **911**
open-ended, asymmetrical waves in, theory of, **318, 319**
rotating joints for, **907**
with slot couplings, dispersion in, **2712**
susceptance of thin iris for TM_{01} waves, **1513**
transmission characteristics of, **2992**
transmission of TE_{01} waves round bends in, **3345**
u.h.f. propagation in, **581**
completeness of system of E- and H-type waves in, **2433**
corrugated, experimental investigation of, **33**
diaphragms in, properties of, **1197**
dielectric-rod, with image plane, **2994**
measurement of λ and attenuation in, **1965**
evanescent waves in, refraction of, **34**
Faraday rotation in, **2710**
generalized telegraphy equation for, **2709**
h.f., relative power-carrying capacity of, **1196**
horn, propagation in, theory of, **320, 915**
inhomogeneously filled, propagation constants of, **2114**
junctions, hybrid, short-slot, **1833**
loss-free, completeness relations for, **3347**
offset, as reactive elements, **910**
multilayered, field expansion in normal modes for, **2993**
with nonuniform cross-section, elimination of reflections in, **1832**
phase changer for, errors in, **2711**
principle of limiting absorption in, **3344**
rectangular, chart for cut-off frequency of, **1514**
coupling by large apertures, **2473**
diaphragms in, and band-pass filters, **3346**
impedance of strips in, **(A)2434, 2707**
magneto-optics of electron gas in, **912, (C)913, 914**
susceptance of symmetrically placed inductive posts in, **2991**
u.h.f. propagation in, **35**
reflectionless termination for, **1674**
reflections at dielectric in, **32**
and r.f. transmission lines, survey of, **1195**
single- and multi-iris resonant structures in, **2708**
slotted sections for cm-wave measurements, **1372**
square-section, abac for TM_{11}-mode attenuation in, **1836**
systems with negative phase velocities, **3342**
and transmission lines, propagation parameters for, **31**
Wavemeters, (See also Frequency meters)
cavity-resonator, for cm waves, design of, **744**
Waves, (See also Diffraction; Sound)
acoustic and e.m., scattering by parallel cylinders, **1803**
a.f., complex, measurement of mean power of, **2688**
elastic, longitudinal, in isotropic cylinders and slabs, **884**
electro-magneto-ionic, relativistic theory of, **105**
e.m., amplified, in ionized medium, Bailey's theory of, **1593**
guided, systems of linear equations in theory of, **1582**
h.f., with signal and random-noise modulation, energy distribution in, **802, 2333, 2891**
Huyghens' principle for, analytical expression of, **1584**
interaction within matter, **2206**
ionospheric scattering of, **779**
longitudinal and transverse, in moving plasma, **383**
plane, inhomogeneous, properties of, **113,** scattering by soft spheres and cylinders, **3397**
and plasma, **971**
scattered, cross polarization of, **3537,** volume-integral equation for, **1412, (C)2586**
scattering of, by cylinders, spheroids and disks, **1261,** by two concentric spheres, **1259**
short, effective velocity of, **471**
slow, production of, **1829**
surface, along dielectric-coated conductor, **30,** along dielectric-coated dielectric cylinder, **662,** on magnetically loaded wires, theory of, **908,** theoretical proof of existence of, **2704**
surge, parameters and operation constants of, **3488**
total reflection with reflection of evanescent wave, **967**
velocity determination, by cavity-resonator method, errors in, **1243,** by microwave interferometry, **2313, 3532**
very-low-frequency, reflection at sharply bounded ionosphere, **786**
Zenneck ground wave, **773**
magneto-hydrodynamic, in gases, **3412**
multiple scattering of, **1578**
ultrasonic, attenuation of, in Ni and Fe-Ni, effect of magnetic field on, **1805**
reflection and scattering by polycylindrical surfaces, **6**
in solids, measurement of attenuation of, **2099**
transmission through thin plate immersed in liquid, **2409**
velocity and absorption in CO_2 and C_2H_4 near critical point, **3310**
velocity in water under high pressure, **1811**
visual observation of, **562**
Wires, fine, for telecommunication apparatus, testing of, **717**

X

X-ray tubes, for medical applications, **1175**

ERRATA

In "Abstracts and References" throughout the year

Abstract	No.	86	In title, for 'Amplitude-Controlled' read 'Volume-Control'.
„	„	563	For '534.321.91-14' read '534.321.9-14'.
„	„	629	Cancel 655.3.
„	„	665	For '656' read '665'.
„	„	674	For '551.510.535.621.3.087.4' read '551.510.535 : 621.3.087.4'.
„	„	745	For 'T. S. Eader' read 'H. H. Davids'.
„	„	783	In last line, for 'nterest' read 'interest'.
„	„	899	In line 9, for 'with' read 'within'.
„	„	906	For '534.232' read '621.395.61/62'.
„	„	1063	For 'G. K. Duff' read 'C. K. Duff'.
„	„	1779	For '1789' read '1779'.
„	„	1941	For '546.831.824-31' read '546.431.824-31'.
„	„	2447	For 'J. Deschanps' read 'J. Deschamps'.
„	„	2570	For 'G. Leibmann' read 'G. Liebmann'.
„	„	2577	For 'R. Stuart' read 'R. D. Stuart'.
„	„	2578	For 'R. Stuart' read 'R. D. Stuart'.
„	„	2648	For 'E. Kneil' read 'E. Kniel'.
„	„	2690	For '2455 of 1951' read '2455 of 1941'.
„	„	2752	In line 4, for '/2' read 'λ/2'.
„	„	2828	For 'G. J. van den Berg' read 'C. G. van den Berg'.
„	„	2993	In title, for 'Norma' read 'Normal'.
„	„	3027	Insert 'H. Meinke' as author.

U.D.C. Changes

Aerial testers	621.392 : 621.396.67
Photocell electron multipliers	621.383.27
Power supply	621.311.6 and subdivisions
Q meters	621.317.737
Synchrotrons	621.384.612
Thermistors	621.316.86 : 537.312.6
Transistors	621.314.7

LIST OF JOURNALS

A selection of the journals which are regularly scanned is given below, together with the addresses of publishers or editorial offices and the abbreviations of titles as used in the Abstracts and References. Applications for copies of any journal should be made to the addresses given.

The full title of each journal is given first and is followed by the address, the abbreviated title being shown within parentheses. In a few cases the nature of a journal is indicated, where neither the title nor the address shows it clearly.

A

Acta Polytechnica, Royal Swedish Academy of Engineering Sciences, Stockholm, Sweden. (*Acta polyt., Stockholm*)

Acta physica austriaca, Springer Verlag, Wien I, Mölkerbastei 5, Austria. (*Acta phys. austriaca*)

Acustica, S. Hirzel Verlag, Zürich, Switzerland. (*Acustica*)

Advances in Physics, Taylor & Francis Ltd, Red Lion Court, Fleet Street, London, E.C.4, England. (*Advances Phys.*)

Alta Frequenza, Associazione Elettrotecnica Italiana, Milano (202), Via S. Paolo 10, Italy. (*Alta Frequenza*)

Annalen der Physik, J. A. Barth, Leipzig C1, Salomonstrasse 18B, Germany. (*Ann. Phys., Lpz.*)

Annales de Physique, Masson & Cie, 120 Boulevard Saint-Germain, Paris 6e, France. (*Ann. Phys., Paris*)

Annales de Radioélectricité, 10 Rue Carducci, Paris 19e, France. (*Ann. Radioélect.*)

Annales des Télécommunications, 24 Rue Bertrand, Paris 7e, France. (*Ann. Télécommun.*)

Annali di Geofisica, Istituto Nazionale di Geofisica, Citta universitaria, Roma, Italy. (*Ann. Geofis.*)

Applied Scientific Research, Martinus Nijhoff, Lange Voorhout 9, The Hague, Holland. (*Appl. sci. Res.*)

Archiv der elektrischen Übertragung, S. Hirzel Verlag, Stuttgart, Germany. (*Arch. elekt. Übertragung*)

Archiv für Elektrotechnik, Springer Verlag, Heidelberg, Neuenheimer Landstrasse 24, Germany. (*Arch. Elektrotech.*)

Archiv für Meteorologie Geophysik und Bioklimatologie, Series A, Springer Verlag, Wien I, Mölkerbastei 5, Austria. (*Arch. Met., Wien*)

Archiv für technisches Messen, R. Oldenbourg Verlag, München, Lotzbeckstrasse 2b, Germany. (*Arch. tech. Messen*)

Arkiv för Fysik, published for Royal Swedish Academy of Sciences by Almqvist & Wiksells Boktryckeri A.B., Stockholm, Sweden. (*Ark. Fys.*)

A.S.T.M. Bulletin, 1916 Race Street, Philadelphia 3, Pa, U.S.A. (*ASTM Bull.*)

Audio Engineering, Radio Magazines Inc., 10 McGovern Avenue, Lancaster, Pa, U.S.A. (*Audio Engng*)

Australian Journal of Applied Science, Commonwealth Scientific and Industrial Research Organization, 314 Albert Street, East Melbourne C2, Australia. (*Aust. J. appl. Sci.*)

Australian Journal of Scientific Research (Series A), 314 Albert Street, East Melbourne C2, Australia. (*Aust. J. sci. Res., Ser. A*)

A. W. A. Technical Review, Amalgamated Wireless (Australasia) Ltd, Sydney, Australia. (*A.W.A. tech. Rev.*)

B

B.B.C. Quarterly, British Broadcasting Corporation, 35 Marylebone High Street, London, W.1, England. (*B.B.C. Quart.*)

Beama Journal, British Electrical and Allied Manufacturers' Association, 36 Kingsway, London, W.C.2, England. (*Beama J.*)

Bell Laboratories Record, 463 West Street, New York 14, N.Y., U.S.A. (*Bell. Lab. Rec.*)

Bell System Technical Journal, American Telephone and Telegraph Company, 195 Broadway, New York 7, N.Y., U.S.A. (*Bell Syst. tech. J.*)

British Journal of Applied Physics, 47 Belgrave Square, London, S.W.1, England. (*Brit. J. appl. Phys.*)

Brown Boveri Review, A. Francke A.G., Bern, Switzerland. (*Brown Boveri Rev.*)

Bulletin de l'Académie des Sciences de l'U.R.S.S., (*a*) série physique, (*b*) série géophysique, (*c*) classe sciences techniques, Academy of Sciences, Moscow, U.S.S.R. (In Russian.) (*Bull. Acad. Sci. U.R.S.S.,* (*a*) *sér. phys.,* (*b*) *sér. géophys.* (*c*) *tech. Sci.*)

Bulletin of the American Meteorological Society, Executive Secretary, 3 Joy Street, Boston 8, Mass., U.S.A. (*Bull. Amer. met. Soc.*)

Bulletin de l'Association suisse des Électriciens, S.A. Fachschriften-Verlag & Buchdruckerei, Stauffacherquai 36–40, Zürich 4, Switzerland. (*Bull. schweiz. elektrotech. Ver.*)

Bulletin de la Société française des Électriciens, 8–14 Avenue Pierre Larousse, Malakoff (Seine), France. (*Bull. Soc. franç. Élect.*)

Bulletin technique de la Suisse romande, F. Rouge & Cie, Lausanne, Switzerland. (*Bull. tech. Suisse rom.*)

C

Câbles & Transmission, Sotelec, 16 Rue de la Baume, Paris 8e, France. (*Câbles & Transm.*)

Canadian Journal of Physics, National Research Council, Ottawa, Canada. (*Canad. J. Phys.*)

Chalmers tekniska Högskolas Handlingar, N. J. Gumperts Bokhandel, Göteborg, Sweden. (*Chalmers tek. Högsk. Handl.*)

Communication News, Philips Telecommunications Industries, Hilversum, Holland. (*Commun. News*)

Communications on Pure and Applied Mathematics, Interscience Publishers Inc., 250 Fifth Avenue, New York 1, N.Y., U.S.A. (*Commun. pure appl. Math.*)

Comptes Rendus Hebdomadaires des Séances de l'Académie des Sciences, Gauthier-Villars, Quai des Grands Augustins 55, Paris, France. (*C. R. Acad. Sci., Paris*)

Comptes Rendus (Doklady) de l'Académie des Sciences de l'U.R.S.S., Academy of Sciences, Moscow, U.S.S.R. (In Russian.) (*C. R. Acad. Sci. U.R.S.S.*)

Section VIII—1953

Index to

Abstracts and References

This section contains an index, listed separately by author and by subject, for all Abstracts and References published in PROCEEDINGS OF THE IRE from February, 1953, through January, 1954.

AUTHOR INDEX

AUTHOR INDEX—A name followed by "and" is that of the first author of a jointly written paper, while the word "with" indicates that the name indexed is that of the second author.

A

Aaron, M. R., synthesis of feedback control systems, **3720**
Abadie, —, and — Blondé, Type-PM 53 broadcasting preamplifier, **3567**
van Abbe, H. H., efficiency and damping of diode rectifiers, **1195, 2129;** input impedance and transimpedance of i.f. transformers, **2578**
— and A. Boekhorst, frame-deflection circuit with voltage-dependent resistor, **3741**
— and J. Jager, application of Type-DK92 heptode at 30 Mc/s, **813**
— and others, new trends in a.m./f.m. receiver design, **2427**
Abbot, F. R., design of buried-conductor r.f. ground system, **(C)42**
Aberdam, H., u.h.f. dielectric aerials, **2896**
Abiko, Y., with M. Tomura, electron multiplication in hard flows of Se rectifiers, **2350**
Achard, É., theorem on ideal transformer networks, **1266**
Acheson, M. A., and E. M. McElwee, reliability of valves, **271**
Ackland-Snow, P. E., and G. A. Gledhill, 6-waveform generator and display unit for testing television channel, **1087**
Adam, E., calculation of transient phenomena in electrically short networks by means of Fourier integrals, **1926**
Adams, E., W. M. Hubbard and A. M. Syeles, permanent magnet from powdered MnBi, **1035**
Adelaar, H. H., cathode-follower operation, **(D)1285**
Admiraal, D., sawtooth derivator, **2269**
Adorian, P., television distribution by wire, **1808;** future of British broadcasting, **2445**
Affleck, J. H., with others, double activators in oxide-cathode base alloys, **3152**
Agdur, B. N., experimental observation of double-stream amplification, **3146**
— and C. G. L. Åsdal, noise measurements on travelling-wave valve, **3145**
Ahrendt, W. R., and J. F. Taplin, Automatic Feedback Control, **(B)840**
Aigrain, P., and H. Bulliard, photomagnetoelectric effect, theory of, **2015,** measurements of in Ge, **2016**
— and C. Dugas, physical properties and radio applications of semiconductors, **1703**
— J. Lagrenaudie and G. Liandrat, conductance of semiconductor in electric field, **1695**
Aisberg, É., miniature receivers for Palais de Chailiot translation service, **2794**
Akao, H., T. Takakura and T. Sasaki, dielectric constant of Rochelle salt at 3 kMc/s, **2729**
Akeley, E., with J. Swihart, axial motion of electrons in linear accelerator, **3077**
Akhiezer, A. L., and R. V. Polovin, plasma oscillations in crossed electric and magnetic fields, **3591**
Albagli, S., effect of losses in h.f. transmission lines, **3475**
Albers-Shoenberg, E., with D. R. Brown, ferrites speed digital computers, **2061**
Albright, W. G., with others, meteorological effects on v.h.f. propagation, **1784**
Alers, G. A., internal friction of quartz, **2349**
Alexander, A. E., with J. R. Anderson, theory of vibrating-capacitor converter, **475**
Alexanderson, E. F. W., control applications of transistor, **792**
Alison, W. B. W., and J. C. E. Taylor, direct-reading thermistor bridge, **(D)2740**
Alixant, M., applications of T networks, **1928**
Alkemade, C. T. J., and G. van den Brink, stabilized calibrated 50-c/s voltage source, **1424**
Allard, L. S., design factors of television c.r. tubes, **1540**
Alldredge, L. R., with T. B. Whiteley, photomechanical wave analyser for Fourier analysis of transient waveforms, **1439**
Allen, A. L., long-life d.c. contacts, **3497**
Allen, C. C., with H. R. Meahl, calibrating ammeters at frequencies > 100 Mc/s, **1075**
Allen, F., production of television receivers, **3739**
Allen, P. J., microwave magnetometer, **1072**
Allen, W. A., with P. H. Parkin, acoustic design of auditoria, **3175**
— with others, acoustics of Royal Festival Hall, **2198**
Allis, W. P., and S. C. Brown, h.f. breakdown of gases, **83**

—— with others, dm-wave beam radio equipment FREDA I, **2160**
Wilson, A. E., with L. J. Rueger, N.B.S. microwave standard-frequency service, **2063**
Wilson, L. T., with N. F. Roberts, counting pulses of various forms and occurrence intervals, **1257**
Wilson, T. A., with others, a.f.c. of high-power klystrons, **2942**
Wilson, T. G., series magnetic amplifier with inductive loading, **(A)338**, **3509**
Winch, G. T., aspects of colour rendering in television, **1818**
Winckel, F., energy spectrum of television image, **234**
Winslade, R., vibration measurements, **790**, **(D)2400**
Winter, A. J., effect of filament voltage on valve characteristics, **1866**
Winterling, K. H., measurement of resistances $> 10^{13}$ Ω, **459**
Witt, H., electrical fluctuation phenomena, **2288**
Witt, R. K., with others, r.f. properties of 16 insulating materials, **1716**
Witten, A. L., and R. E. Henning, wide-band waveguide recording reflectometer, **468**
Woerner, J. J., with others, high-power klystrons, **1213**
Wong, J. Y., radiation of slots in elliptical cylinders, **3482**
Wood, C. B. B., with A. V. Lord, variable-definition camera channel for appraisal of television standards, **1758**
Wood, J. E., with others, temperature variation of magnetization of Ni, **1033**
Wood, R., reliability of subminiature valves with filament cathodes, **3749**
Woods, J., and D. A. Wright, secondary emission from BaO, **896**, changes in, and in thermionic emission during electron bombardment, **2184**
Woodson, H. H., and C. V. Thrower, compensation of magnetic-amplifier servo system, **3114**
Woodward, J. G., and J. B. Halter, lateral mechanical impedance of gramophone pickups, **3181**
Woodward, O. M., Jr, balance measurements on balun transformers, **3663**
—— with G. H. Brown, radiation characteristics of conical and triangular aerials, **1238**
Woodward, P. M., information theory, **3101**
—— with others, electronic band structure of PbS, **2037**
Wooley, M. C., G. T. Kohman and W. McMahon, polyethylene terephthalate as capacitor dielectric, **440**
Woolley, J. C., with others, magnetic viscosity under discontinuous and continuous field variations, **123**
Woonton, G. A., diffraction field of circular aperture, **1294**
Worswick, T., and J. L. Bliss, television camera with optical view-finder, **856**
Wray, A. G., Q factor measurement, **775**; measurement equipment for f.m. systems, **3864**
Wray, D., unit for superimposing two television pictures, **2174**
Wray, W. J., Jr, *RC* oscillator, **(D)2604**
—— with L. Packer, Ge photodiodes read computer tapes, **454**
Wright, D. A., conference on microwave physics, Oxford, July 1952, **965**; survey of thermionic emitters, **2832**
—— with J. Woods, secondary emission from BaO, **896**, changes in, and in thermionic emission during electron bombardment, **2184**
Wright, R. W., with others, properties of ferrites at v.h.f., **1312**
Wrigley, W. B., moving poles in nonlinear oscillating systems, **2601**
Wu, Ta-You, with H. E. Moses, dissociation of O_2 in upper atmosphere, **182**

Y

Yaeger, R. E., with others, optical encoder and digit register using transistors, **786**, **2373**
Yakovlev, V. A., with A. G. Samoilovich, additional resistance of ferromagnetic metals, **1402**
Yamada, Sueharu, with others, networks with maximally flat delay, **(D)2259**
Yamaka, E., study of oxide cathodes by X-ray diffraction, **397**
—— and T. Sugita, energy-band structure in Si crystal, **3327**
Yamanaka, S., with Y. Koike, limiting frequency of triode oscillator, **1891**;

amplification constants of triodes, **1537**
Yanus, R. I., with V. V. Druzhinin, anisotropy of coercive force in single crystals of Si-Fe alloys, **2704**
Yates, J. G., with K. F. Sander, accurate mapping of e.s. fields in electrolyte tank, **2739**
Yeh, Chai, analysis of single-ended push-pull audio amplifier, **2613, 3251**
Yetter, W. P., with others, synthesis of paralleled 3-terminal *RC* networks, **3538**
Yonezawa, T., F_2-layer electron-density variations after sunset, **2656**; recombination-coefficient and temperature variations in F_2 layer at night, **2662**; mechanism of electron removal from F_2 layer, **3298**
Yorke, R., with K. R. McLachlan, objective testing of pickups and loudspeakers, **19**
Yoshida, S., and I. Takeda, secondary emission from oxide cathodes, **2836**
—— I. Takeda and H. Arata, dissociation of oxide-coated cathode, **2834**
Yosimoto, H., oscillatory phenomena in hot-cathode discharge tube, **2959, 2960**
Young, A. S., with V. Roberts, PbSe photoconductive cells in infrared spectroscopy, **3142**
Young, J. R., conductivity and thermoelectric power of (BaSr)O and BaO, **896**
Young, J. Z., with F. Roberts, flying-spot microscope, **1759**
—— with others, flying-spot microscope, **3073**
Young, W. R., Jr, mobile radio transmission at 150, 450, 900 and 3700 Mc/s, **823, 1795, 3711**
Youngmark, J. A., loudspeaker baffles and cabinets, **2201**
Yu, Y. P., highly stable variable time-delay circuits, **1261**
Yurkov, V., with others, electrical properties of Sb_2S_3 and Bi_2S_3, **3019**
Yvon, J., theory of ferromagnetism and Heisenberg's model, **1008**

Z

Zaayer, D., 100-kW television output stage, **3742**
Zackay, V. F., and others, fundamentals of glass-to-metal bonding, **2712**
Zadeh, L. A., optimum nonlinear filters, **2598**; theory of nonlinear 2-pole networks, **3220**; analysis of valve and transistor circuits, **3223**; a class of stochastic operators, **3348**; nonlinear multipoles, **3546**
—— and J. R. Ragazzini, optimum filters for detection of signals in noise, [illegible]
—— with J. R. Ragazzini, analysis of sampled-data control systems, **(A)1801**
Zakhaim, M., impedance transformation of folded dipole, **(D)3200**
Zakheim, J., power amplifier for driving low-power d.c. motor, **687, 2947**
Zavadovskaya, E. K., breakdown strength and mobility of charges in dielectric, **1375**
Zeluff, V., with J. Markus, Electronics for Communications Engineers, **(B)909**
Zemke, H. J., with H. Dippner, reverberation times of Berlin auditoria and sound-recording studios, **3467**
Zenner, R. E., with others, electronic function generator, **451**
Ziegler, H. K., optimum design of permanent magnets, **(A)3039**
van der Ziel, A., noise, shot, in semiconductors, **2040**, in gas discharges, **2185**, accuracy of measurement with square-law detector, **2724**; simple method for measurement of cathode interface impedance, **2839**
—— with W. W. Lindemann, flicker noise caused by interface layer, **1531**
—— with R. H. Mattson, shot noise in Ge filaments, **2035**
Zimmer, E., with H. Höhl, intensity and polarization of e.m. waves diffracted at slit, **3269**
Zingerman, Ya. P., with N. D. Morgulis, investigation of oxide cathode, **1527**
Zinke, O., current and voltage distribution, in cylindrical, ellipsoidal and conical aerials, **2568**, along rotationally symmetrical aerials, **(A)3195**
—— with J. Deutsch, screening of test rooms and instruments from e.m. fields, **3116**
Zirm, R. R., with others, microwave correlator, **1067**
van Zoonen, D., and G. Prast, Jr, properties of Ar-Br-filled counters, **1463**
Zwicker, E., limits of perception of a.m. and f.m. of pure tones, **303**
—— and G. Gässler, suitability of dynamic headphones for measurements on f.m. tones, **312**
—— and W. Kaiser, modulation threshold in audible range, **1892**
—— and W. Spindler, influence of nonlinear distortion on audibility of frequency vibrato, **2870**
Zworykin, V. K., present stage of development of television, **237**
Zyngier, H., with D. Blanc, application of Wilkinson's theory to G-M counters with external cathode, **3389**

SUBJECT INDEX

SYMBOLS (A) Abstract, (B) Book Review, (C) Note of Correction, (D) Discussion

A

Abacs, (See also Charts)
for capacitors for zero-temperature-coefficient oscillatory circuits, **954**
for computation of tropospheric refractive index, **1670**
for correction of *Q*-meter errors due to valve-voltmeter loading, **783**
Absorption, (See also Acoustics; Ionosphere)
acoustic, in granular media, **923**
by materials, measurement with directive transmitters and receivers, **12**, reverberation-chamber method of measurement of, **3466**, tube method for measurement of, **925**
by perforated bricks and rock-wool boards for television studios, **3174**
by rubber tank-lining materials, **1569**
in suspensions and emulsions, case of fog in air, **2547**
by tubular and hollow-brick resonators, **310**
acoustic and ultrasonic, in water and aqueous solutions of electrolytes, **2196**
coefficient, acoustic, comparative measurements and test specification, **1570**, as function of angle of incidence, **2548**, measurement of, **2197**, measurement of by long-tube method, **13**, measurement of by reverberation-time method, **3465**
in electron-gas mixture, **2297**
ionospheric, measurement of, **2661**
measurements and theory of, **1679**
observations at Calcutta, **3690**
of pulse signals, automatic measurement of, **1680, 2313, (D)3305**
of short waves, calculation of, **1351**, effect of geomagnetic field on, **1678**
microwave, of electrolytes, **698**
of O_2, line breadths in, **91**
of ND_3, spectrum lines of, **2298**
in polar liquids at 3 kMc/s, standing-wave method of measurement of, **2066**
ultrasonic, in animal tissues and plastics, **1562**
in liquids, and relaxation mechanism, **604**
in mixtures of ethyl alcohol and water, **1222**
of water-borne sound, by resonance-type materials, **308**
Accelerometers, $BaTiO_3$-ceramic, **2399**
Acoustics, (See also Absorption; Broadcasting studios; Impedance; Sound; Ultrasonics)
anechoic chamber at Technische Hochschule, Karlsruhe, **1889**
artificial ears for calibrating telephone receivers, comparison between, **1888**
of auditoria, design problems of, **3175**
of auditorium designed for technical meetings, **610**
bibliography, **1, 910, 1549**
of broadcasting studios, Swansea, Helmholtz resonators for improvement of, **309**
of Cologne broadcasting centre, **3468**
damping of pulsating air bubbles in water, measurement of, **2534**
of halls, analysis of transient effects by means of models, **921**
ceiling treatments in relation to reverberation times, **1896**
diffusion in, **1893**
impedance tube, resolving power of, **2867**
improvements in Vienna church of St. Anthony of Padua, **14**
musical scale, measurement of intervals of, **1887**
musical tone, complex, 3-dimensional representation of, **1219, 3462**
problems at Waldbuhne open-air theatre, Berlin, **1573**
properties of building materials, comparative measurements on, **311**
radiation pressure and dispersion, **1565**
reverberation chamber with polycylindrical walls, **922**
reverberation times, of Australian concert halls, **3176**
of 52 Berlin auditoria and sound-recording studios, **3467**
of rooms, boundary conditions for wave equation, **1894**
c.r.o. display for reverberation-time measurements, **307**
effect of wall shape on, **2872**
improvements in absorptive linings, **1567**
measurements of, methods and apparatus for, **606**
and quality of loudspeaker reproduction, **3469**
reverberation-time measurement accuracy with warble tones and with white noise, **1571**
of Royal Festival Hall, London, **2198**
of theatres, sound-delay system for improvement of, **1572**
Acousto-electric effect, **2281**
Aerial Arrays, broadside, helix, radio-astronomy, at Ohio State University, **3490**
curtain-type, power gain of, **1909**
end-fire, **2901**
optimum design of, **2225**
high-gain, for television broadcasting, **1236**
linear, broadside, slotted-waveguide, with simultaneous odd and even radiation patterns, **40**
for minimum width single beam end fire pattern, **2571**
optimum design of, **1594**
shunt-slot, effects of dimensional errors on performance of, **1592**, factors affecting performance of, **1241**
multiloop, stagger-tuned, for wide-band loran reception, **3207**
radiation pattern of, analogue computer for, **3198**
ring type, comprising tangential or radial dipoles, **2570**
slotted waveguide, second-order beams of, **1914**
with symmetrical conductance functions, **2903**
u.h.f., mobile, **2222**
Aerials, (See also Lenses, microwave; Transmission lines; Waveguides)
and aerial arrays, mutual radiation resistance of, **32, (D)627**
Aerials, aircraft, fittings for reduction of precipitation interference, **2895**
'artificial-slot', using high-permeability dielectrics, **1916**
conical and triangular, radiation characteristics of, **1239**
corner-reflector, radiation diagrams of, **2224**
cylindrical, ellipsoidal and conical, current and voltage distribution in, **2568**
solution of Hallén's equation for, **1908**
theory of, **(D)629**
thick, input impedance of, **1235**
dielectric, u.h.f., comparison of disk with other types, **2396**
dielectric-disk, **2572**
dielectric-rod, **325**
longitudinal radiation of, **1244**
polystyrene and lucite, **3479**
dielectric spiral round magnetic rod, **1942**
dipole, cylindrical, gain and back-scattering cross-section of, **(D)2894**
horizontal, in dissipative medium, theory of radiation from, **1587**
with tuned parasitic radiator, **(D)324**
directive, beam shaping for, theory of, **31**
conical-helix, radiation field of, **2899**
using convex waveguide-lens, theory of, **3204**
gain of, approximate formulae for, **635**
loop, using ferroxcube rods, **939**, small, radiation resistance of, **2905**
microwave, with plane reflector, analysis for, **1243, 1913**, reflectors for, side-lobe analysis for, **41, (C)2226**
with parabolic reflectors, characteristics in absorbing media, **3206**, with very good matching, **326**
with passive directors, investigation using small-scale models, **2893**
plane reflectors for, **936**
rhombic, coplanar, coaxial, mutual impedance of, **3197**, free-space radiation impedance of, **2898**, receiving, design of, **2223**, receiving, vertical pattern of, **1912**
rotating Adcock, null characteristics of, **2906**
two-mast, medium-wave, design and performance of, **2227**
wide-band, u.s.w., **636**
discone, design of, **3196**
earthing system, radial-conductor, design of, **(C)42**
feeders for, coaxial, developments in, **2210**
losses in, **2211**
flush-mounted, for military aircraft, **634**
folded-dipole, impedance transformation of, **(D)3200**
input impedance of, **3488**
with two or more elements, impedance transformation of, **1234**
Hallén's integral equation for, difficulties with present solutions of, **633**
helical, beam, for citizens' radio, **1593**, performance of, **3489**
high-resolution, for scanning the solar disk, **2573, 3209**
horn, e.m., gain of, **935**, with phase-correcting lenses, **1242**
impedance of, measurement of, **630**
lens, for cm λ, survey of, **3203**
linear, theory of, **3201**, calculation of some definite integrals in, **1238**
loop, for interference elimination in long-wave reception, **35**
for portable receivers, **3481**
receiving, with hollow prolate-spheroidal core, **3491**, with spheroidal ferromagnetic cores, gain of, **1917**
small, measurement of radiation resistance of, **327**
mutual impedance of, simplified calculation of, **3199**
portable 200-ft Al-alloy mast, **3194**
radar, moulded plastic reflector for, **1911**
parabolic, with rotating beam, **1245**
wide-angle-scan, using Schmidt system, **938**
radiation patterns of, c.r.o. display of, **3069**
receiving, cylindrical-wire, back-scattering from, **36**
short, theory of, **628**
rotationally symmetrical, current and voltage distribution along, **(A)3195**
sloping-V, nonresonant, distant field of, **3205**
slot, for f.m. altimeter, **2897**
waveguide-fed, radiating into parallel-plate regions, **1915**, shunt conductance of, **323**
slotted-cylinder, double-slotted, horizontal radiation diagrams of, **2228**
of elliptical cross-section, radiation from, **3482**
straight, theory of, **2220**
thin, carrying harmonic currents, mutual impedance of, **2569**
straight-wire, radiation resistance of, **1588**
switching system for, **33, 933**
television, receiving, **1590**, theory and design of, **1237**
transmitting, B.B.C., **934**, emergency, WJZ-TV, on Empire State Building, **631**, high-power, modern, **632**, suspended feeders at Kirk o' Shotts and Wenvoe, **34, 929**, u.h.f., using slot arrays, **2900**
transmitting, combined, for television and f.m. broadcasting, on Empire State Building, **1589**, for television and u.s.w. broadcasting, **37**
for U.S. Navy 14·5–35-kc/s transmitter, **821**
vertical, double, directional action of, **3208**
ground-reflection phase-error of, **2221**
v.h.f., impedance of, measurement of, **1432**
measurement of radiation patterns of, **3480**
Alloys. See Ferromagnetic materials.
Altimeters, f.m., nonquantized, **3311**
Ammeters, calibration at frequencies > 100 Mc/s, **1075**
Amplification, d.c., limits of, survey of, **2277**
of microwave radiation by substances not in thermal equilibrium, **3593**
by space-charge waves in electron beam in crossed e.s. and e.m. fields, **278**
Amplifiers, (See also Circuits; Television)
a.f., bypass and decoupling circuits for, design of, **2614**
constant-current, design of, **1635**
differential input stage for, **2616**
feedback, Type-PM53, for sound reproducers, **3567**
gramophone-pickup, with adjustable response curve, **315**
high-power, **2948**
input circuits for, **2615**
medium-cost, with good performance, **979**
negative-feedback tone control for, **64**
noise in, **368**
pentode output stages of, performance of, **1636**
power, for constant-current Class-A2 operation, **2609**, 'Maestro', **978**
push-pull, single-ended, **3250**, single-ended, analysis of, **2613, 3251**, using transistors, **3521**
a.g.c., using NTC resistors with heater, **1953**
cathode-follower, design charts of, **3565**
cathode-follower circuits as high-impedance input stage for, **367**
class-B, avoidance of grid current in, **3249**
constant-volume, using cathode-follower circuit, **365, (D)686**
d.c., cathode-drift compensation in, **(A)2617**
coupling of cathode followers in, **3252**
high-gain, **172**
high-sensitivity, with crystal contact breaker, **787, 2395**
high-speed, using moving-coil galvanometer, **1090**
with low-pass feedback network, **369**
based on magnetic modulator, **72**
for measurement of pH, **3683**
with negative feedback, **1950**
parallel-T, low-drift, wide-band, **982**
valve, **981**
for voltages down to 10^{-9}V, **2276**
dielectric, using ferroelectric capacitor, **1283**
mathematical analysis of, **70**
differential, for discriminating against push-push signals, **(D)1637**
distributed, mutual-inductance-coupled, **1284**
wide-band, theory of, **2612**
for driving low-power d.c. motor, design of, **687, 2947**
feedback, design of, **988**
h.f., tuned, using transistor tetrode, **677, 1184**
l.f., 1–3-c/s, **2950**
line and flat-gain, for L3 coaxial-cable system, **3411**
line and terminal, for Birmingham/Manchester coaxial cable, design of, **977**
'lock-in', using square-wave generator, **2608**
magnetic, analysis of, use of flux-charge concept in, **337**
balance-detector type, principles and applications of, **3504**
basic operating principles of, **332**
classification of, **2911**
comparison of methods of analysis of, **2910**
control of, **3507**
dynamic characteristics of, **2579**
effective feedback ratio of, **3510**
figure of merit of, **(A)2580, 2912**
half-wave, for servomechanisms, **(A)3724**
with high input impedance, **336**
high-speed, **3512**
low-input-power, **333**
'Magamp', and industrial applications, **945, 1095**
mechanics of, **3503**
parallel-connected, with inductive load, analysis of, **1251**, with resistive loads, analysis of, **(D)944**
priority of French publications on, **(D)943**
with reset control, **2581**
rules of similitude for, **334**
and saturable reactors, bibliography on, 1887 to mid-1951, **3506**
self-balancing potentiometer type, **3511**
self-saturated, half-wave, control characteristics of, **3505**
self-saturating, steady-state analysis of, **2235**
series-connected, idealized, analysis of, **3508**, with inductive loading, **(A)338, 3509**
single-core, as computer elements, **3048**
theory of, **2909**
transient response of, **2236**
transistor-controlled, **3211**
with voltage feedback, optimum input-winding resistance of, **3210**
3-phase transductor circuits for, **949**
60-c/s, application to position-indicating servomechanism, **335**
negative-feedback, harmonic distortion in, **2278**
using pentode, equivalent-circuit analysis of, **2611**
for relaying television signals over coaxial cables, **984**
noise/signal ratio of, methods for reduction of, **976**
photocell, stable-gain, **692**
power, cavity-type, design of, **2949**
proportional, reproduction of voltage pulses by, **691**
pulse, analysis of response to rectangular wave, **3566**
ionization chamber, background noise in, **1634**
use of gas-filled triode in, **2274**
push-pull, class-A, distortion in, **2610**
integrating, for c.r.o. recording of magnetic flux, **3062**
RC, feedback, with electronic tuning, **1638**
Amplifiers, *RC*-coupled or direct-coupled output stage of, analysis of, **1286**
selective, Wien bridge as frequency-determining element in, **1951**
10-c/s–10-kc/s, for null measurements, **1633**
superregenerative, microwave, noise in, **1948**
transistor, cut-off frequency of, **689**
formulae for characteristics of, **1601**
noise in, **1288, 2279**
transient response of, **3513**
variation with frequency of parameter values, **3518**

video, amplification and bandwidth of, 69
amplitude and phase distortions in, relations between, 980
effective bandwidth of, 1947
very-wide-band, 2275
wide-band, feedback-pair, 366
for weak photoelectric currents, 329
wide-band, compensated, design of, 1949
voltage ratios of, measurement of in range 1–100 Mc/s, 1735, 2731
Analogies, between acoustic and e.m. phenomena, 911
electrical and mechanical, 988, 989
Analysers, frequency-spectrum, a.f., heterodyne-type, (D)776, heterodyne-type, with mechanical filter, 1227, selective, 2073
for arbitrary function of short duration, 160
mechanical, for pulse series, 3641
harmonic, photomechanical, for transient waveforms, 1439
pulse-amplitude, compensation against grid/cathode capacitance effects in, 941
new design of, 1920
for nuclear research, 639
stability and equality of channel widths in, 2230
Analysis, complex-frequency, using phase principle, 918
dimensional, and rationalization, 3584
frequency, of acoustic phenomena, 1886
spectrum, narrow-band, of p.p.m. signal, 470
Antiferromagnetism, and crystal structure, of CrSb, 3036
properties of CoO and MnO mixtures, 2343
structure deformations in CoO and MnTe, 3035
survey of, 706, 3585
zero-point susceptibility of linear chain, 2633
Astronomy, radio, 92, (See also Cosmic radiation; Solar radiation)
broadside aerial array at Ohio State University, 3490
radio stars, determination of position of, 1329, interferometer measurement of diameter of, 1330, occultation of by solar corona, 98, possible radiation mechanisms of, 1328, scintillation of during aurorae and magnetic storms, 396
Atmosphere, (See also Ionosphere; Troposphere)
correlation of pressure fluctuations with solar activity, 1323
electric-equilibrium layer, height of, 1343
lower, ionic equilibrium of, 719
microwave refractive index of, constants in formula for, 1990, 3287
measurement of variations of, 1085
rapid variations of, 431
slide-rule computation of, 1014
ozone in, density and mean temperature of, annual variation of in Afghanistan, 2979
formation and distribution of, 1015
vertical distribution of, 2649
upper, continuous layer formation in, effect of solar radiation on, 2651
dissociation of O_2 in, 102
effects of solar radiation in, 1321
electrical conductivity of, and diurnal variations of geomagnetic field, 2647
over India, physical properties of, 403
investigations of, and auroral spectroscopy, 1017
photochemical reactions in, 1342, and relation to temperature, 1344
vertical distribution of nitrogen in, 402
between 80- and 250-km height, physical properties of, 3288
Atmospheric electricity, e.s. field at Khartoum during solar eclipse, 25th Feb. 1952, 104
in foggy conditions, 1355
measurement of field by radioactive probe, 1681
potential gradient, 1354
Atmospherics, mean level of, and intelligibility of km-λ radio link, 105
meter for, 'ogiver', 1443
observation stations, list of, 3100
propagation of, theory of, 1108
with very low-frequency components, 2771
Attenuators, cut-off, for waveguide circuits, 1938
magnetically-controlled, u.h.f., 1937, characteristics of, 964
waveguide, inductive, using properties of waveguide below cut-off, 2599
Audiometers, at Technische Hochschule, Stuttgart, 1891
Aurora, in Canada, orientations of, 3307
electron densities in and radio echoes from, 1999
and geomagnetic storms, theory of, 1013
35- and 74-Mc/s pulse echoes during, 2976
location with 10-m radar equipment, 728
radio echoes from, 3308
geometry of, 1357
at 33 Mc/s, long-duration, 2000
and scale-height determinations, 3309
southern zone as defined by homogeneous arcs, 3310
spectroscopy of, and investigations of upper atmosphere, 1017
theory of, 1356, 1358

in Ne, 702
recent information on, 3632
spark, dependence on humidity and time, 2290
u.h.f., of gas subjected to crossed electric fields, 3261
Bridges, a.c., balance approach in, 1434
d.c., null detector for, design of, 3665
for dielectric measurements from 100 kc/s to 1 kMc/s, 782
high-resistance, for measuring conductivity of ground, 3365
impedance, h.f., with variable ratio arms, 1433
precision, for frequencies up to 20 Mc/s, 169
for measurement of admittance parameters of junction transistors at 1 kc/s–1 Mc/s, 3359
mutual-inductance, for measurements on ferromagnetic cores, 460
phase, for c.r.o. display of distortion in television apparatus, 2391
r.f., for measurement of low admittances, use of thermistors in, 1748
thermistor, for measurement of power at λ 3 cm, 1749, (D)2740, (D)3366
Wheatstone, for admittance determinations, (A)3367
Wien, and applications, 479
as frequency-determining element in selective amplifiers, 1951
Broadcasting, B.B.C. equipment for outside broadcasts, 224
British, future of, 2445
centre, Cologne, architectural acoustics of, 3468, supervision of electroacoustical equipment in, 3717, technical arrangements, 3716
low-frequency, Pierre Bourdan, Paris, 825
m.f., influence of ionosphere on, 3096
studios, auxiliary circuits in, 223
installations for, and new S.F.R. equipment, 826
Swiss organization of, 1123
and television, Radio Canada building, Montreal, 221
u.s.w., coverage problems of, 2139
planning of, 2789
service-area estimation, under conditions of interference, 214, and system planning for, 213
——**stations**, on the Hoher Meissner, North Hesse, 222
medium-wave, s.w. and u.s.w., N.W.D.R., 2148
small, private, in Germany, transmitters and studio equipment for, 2178
Wavre-Overijse, transmitting equipment at, 1128

C

Cables, coaxial, attenuation of, measurement of in range 1 Mc/s–4 kMc/s, 2072
characteristic impedance of, unit-step signals for determination of, 2732
with disk insulator, characteristics of at frequencies > 1 kMc/s, [illegible]
with helical-strip insulation, characteristics of at frequencies > 1 kMc/s, 3184
noise-free, production of, 2878
pulse deformation in, theory of, 1905
reflections due to impedance irregularities in, 2730
r.f., with liquid dielectric, 3472, measurement of characteristics of, 158
for television links, factors affecting performance of, 928
transmission parameters of, 2559
fault-location by pulse-echo methods, 2727
with nonuniform characteristic impedance, pulse response of, 2070
star-quad, without coils, for broadcast programmes, tests on, 1578
telecommunication, noise measurements on, 3182
Cables, of Verwaltung für Installationen, Kabel, Apparate, 617
wide-band, fault location by pulse-echo method, 2728
Calculating machines. See Computers.
Cameras, (See also Television)
100000 frames/sec, developed at Battelle Memorial Institute, 2056
Capacitance, of circular annulus, calculation by subarea method, 2302
of cube, calculation of, 2639
Capacitors, fixed, developments in, review of, 953
with high-ε dielectric, stray capacitance in, 3217
metallized-impregnated-paper, high-temperature operation of, 345
metallized-paper, 344
mica, l.f. power factor and capacitance of, 1925
nonlinear, titanate, 2916, properties and applications of, 2915
r.f. characteristics of, (D)51, 2244
Russian notation for value of, 2927
vacuum, development of, 52
for zero-temperature-coefficient oscillatory circuit, abac for, 954
Carrier-current systems, (See also Telegraphy)
analysis of build-up process in, 1249
calculation of transients in, 2246
cable links for, German, 2436
coaxial-cable, L3, 3409, amplifiers for, 3411, equalization and regulation in, 3410, television terminals for, 3424
nonlinear filtering and waveform multiplexing for, 670
power-line, frequency-shift, oscillator and discriminator for, 1482
noise in, 3705
transmission factors for, 3704
telephony, terminal equipment for, 1121
for Weser-Ems power-supply network, 2435
Cathode-ray oscillographs, automatic trace brightening for, 3369
beam intensifier for, 162
with delayed-trigger timebase circuit, for television waveforms, 1438
frequency markers and scales for, 1077
h.v., cold-cathode, 2743
for interference measurements in aircraft, 2075
for investigation of transients in heavy-current equipment, 3371
for television-waveform display, 2745
time marker, decade, dekatron, 771
for transistor characteristics, 784, 1437
trapezoidal distortion in, 2742
for vector representation of sinusoidal voltages, 3372
for 1–300-μs pulses with repetition frequencies up to 10^4/sec, 3667
——**oscilloscopes**, with e.s. deflection, for 100-kV pulses, 3067
Type GM5660, 3370
——**tubes**, (See also Counter tubes; Television)
constant-resistance deflection circuits for, 235
deflection-coil design for, 1834
flying-spot, new phosphors for, 3608
life testing of, 1444
positive- and negative-ion formation in, 2846
screens of monomolecular thickness for, preparation of, 3761
storage-type, direct-viewing, bright-trace, 3760
graphechon, improved, 1539, 2845
reduction of read-around ratio in, 3353
single-gun, improved, 1868
Cathodes, (See also Electron emission)
BaS, properties of, 893
capillary, metal, 3148
disk-type, improvements in, 898
dispenser-type, 'impregnated', 2502
filament-type, thermal time constant for, 282
oxide, BaO, activation of, photoconductivity study of, 1529, dissociation caused by primary electron bombardment, 2834, luminescence and thermionic emission of, 1712
BaO and (Ba,Sr)O, conductivity and thermoelectric power of, 896
(Ba,Sr)O, dependence of thermionic emission on wavelength of illumination of, 284
BaO-on-W, methods of preparation of, 1189
base alloys for, double activators in, 3152
conductivity of, 894, retarding-potential method for measurement of, 2835
effect of impurity migrations on, 1858
effects of oxygen on electrical properties of, 1190, 2503
experimental investigation of potential gradient in coating of, 1527
in gas discharges, spectroscopic investigation of, 1188
interface impedance of, effects in television receivers, 2505, measurement of, 2839, 3149
with interface layer, investigations on, 2833
interpretation of Nijboer's theory for, 2504
pulsed emission of, decay and recovery of, 285
review of investigations on, 1528
secondary electron emission from, 2836
semiconductor properties and performance of, 286
and semiconductors, 1859
thermionic emission and conductivity of, relation between, 3455
thoria, 2506, 2507, 2508, 2840, measurements relating to filaments of, 3151
W-filament, experimental investigation of emission from, 1857
X-ray diffraction method for study of, 397
oxidized Ni and W, field emission of electrons from, 1962
photoemissive, Cs-AgO, changes during heat treatment, 3447
Cs-Sb, 416, various, 2824
relation between sparking phenomena and surface e.s. field, 292
square-cage filament, equivalent diameter of, 3153
wire, temperature distribution at ends of, 283
Charts, (See also Abacs)
for attenuation of seven commonly used ladder-filter sections, (A)961, 3544
for bandwidth of λ/4 matching sections, 30
for cathode-follower amplifiers, 3565
for coaxial-line probe measurements, 458
for design of planar triodes, 2514
for skin effect in conducting materials, 435
for solution of sky-wave problems, 1469
for use in high-Q measurement, 464
for winding data of dust-cored coils, 647
Chronographs, recurrent sweep, 3068
Circle diagrams, for certain types of network, 43
for input admittance of grounded-grid disk-seal triode, 3564
Circuit diagrams, standardized layout for, 3492
utility factor in, 63, 671
——**theory**, (See also Networks)
Ohm's law for build-up phenomena, 638
pass band, general definition of, 3534
relation between width of and transient distortion, 3539
resonance characteristics by conformal mapping, 53
Circuits, (See also Networks)
a.f.c., lock-in performance of, 1280
anode-follower, derivatives of, 658
antiresonant, electronic, 2591
and assemblies, etched, plug-in, for computers, 2263
cathode-follower, with capacitive load, (D)1285
as high-impedance amplifier input stage, 367
RC, 662
theory and design of, 3247
combining, for connecting transmitters to common aerial, 870
correction, design of, 1450
counter, decade, gated, 1256
for random pulses, 1257
coupled, natural frequencies of, equations for, 1276
coupled inductively, double resonance in secondary of, 1620
equivalent, for three-pole and multipole networks, 2247
feedback, relation between closed-loop transient response and open-loop frequency response of, 3231
use of signal-flow graphs for analysing, 3531
using ferrite magnetostrictive resonators, 2229
ferroresonant, automodulation in, 1270
flip-flop, Eccles-Jordan, design of, 952
for l.v. operation, design of, 1602
triode, design for long-term stability of, 3558
impulse-governed-oscillator (I.G.O.), Type-E80T beam-deflection valve in, 2817
LRC, with nonsinusoidal voltage, power in, 1259
multivibrator, bistable, design of, 1946
negative-resistance, transistor, analysis of, 641
nonlinear, effects in, and applications of, 2273
series, subharmonics in, 2929
oscillatory, amplitude stability in, 3242
damped, field quantization applied to, 3243
LC, temperature compensation of, 2603
parallel-tuned, periodically switched to d.c. source, analysis of, 65
relation between susceptance slope and selectivity, 2928
response of, to linear-frequency-sweep voltage, (D)2930, to 'ramp' voltage, 2265
including temperature-dependent elements, 68
with variable inductance, transient phenomena in, 3551
3-dimensional locus curves for, 2266
including overdriven valves, graphical analysis for, 356
phase-delay, wide-band, waveguide, 3192
printed, production of, auto-sembly technique for, 355, 3548, plating method for, 354, Technograph etching system for, 353
for transistors, 674
unit assemblies for television, 352
printed and potted, 2926
using quartz-crystal, as f.m. oscillator and discriminator, 1277
RC, with voltage gain, 663
resonant, *RLC*, action of train of pulse signals on, 3241, in series, response to e.m.f. whose frequency is a linear function of time, 1941
spontaneous voltage fluctuations in, 676
response to f.m. signal, and analogy with a.m., 3246
scaler, ferromagnetic, 1255
square-law, for use with graphic recorder, 346
switching, high-speed, bistable, 648
transistor, 652, 3515, graphical analysis of, 653
time-delay, variable, highly stable, 1261
transconductance-bridge, for frequency elimination, 59
transistor, and applications, 3213
complementary-symmetry, 3519
matrix representation of, 642
theory of, 3520
with transformers, 1287
trigger, for cold cathode counter tubes, 49
transistor, 651, design of, 2914
using Type-A transistors, 3516
valve, without anode supplies, 685
applications of tensor theory to, 659
grounded-electrode, analysis of three types of, 1632
novel, 2600
triode, transformations of, 3529
valve and transistor, simplified analysis of, 3223
Classification, decimal, universal, explanation of principles of, 2520
Clocks, atomic, and frequency stabilization, (D)1422
quartz, of Greenwich time service, 3354
Clutches, moving-coil-actuated, 1094
Coders, feedback, for analogue to digital conversion, 3414
Coils, choke, for airborne power supplies, design of, 1924
for communication equipment, with ferrite cores, design of, 1923
dust-cored, charts for winding data of, 647
with ferrite cores, copper eddy-current losses in, 3526
helical, in dielectric supports, attenuation of, 1523
single-layer, calculation of parameters of, 1922
toroidal, powder-core, moisture aging of, 2355
Communication, theory of, analytical signals with limited spectra, 2137
application, to telecommunications and radar, 1792, to telecontrol and measurements, 1481
autocorrelation from ergodic hypothesis, 535; calculation for teletype signals, 537
comparison of channel capacity of a.m. and ph.m. systems, 2786
concept of entropy in, 536
correlation v. linear transforms, 1477, (D)3701
ideal coding for redundancy, 1478
introduction to, 3101
limits on information content of e.m. signal, 2135
prediction of nonstationary stochastic processes, 445
research on, problems and methods of, 1479
statistical, introduction to, 819
statistical equivalent of optimum transducers, 3700
——**equipment**, (See also under individual subjects)
beam radio, dm-wave, FREDA I, 2160, Swiss developments in production of, 1548
f.m., transportable, microwave, for military purposes, 1127
microwave, multiplex, Types FR and FJ, 3107
multiplex, time division, 212
and navigation aids, aboard merchant ships and fishing vessels, 3418
24-channel, p.p.m., input circuit and i.f. amplifier of, 1483
——**systems**, (See also Carrier current systems; Radio links; Radiotelegraphy; Radiotelephony; Relay systems; Telegraphy; Telephony)
air/ground, radio-link system, 3715
'ambiguous index', 2433
for civil aviation, 1024, [illegible]
installations at French overseas aerodromes, 3419
on German railways, 216
harbour radio, v.h.f., German, 1487
on Indian railways, 1122
linear, optimum transfer characteristics of transmitter and receiver for, 2136
mobile, channel spacing for, choice of, 3714
f.m., multi-station, for Ayrshire police, 1129
frequency-band economy in, 1797, 3713
m.f., bibliography on, 3407
R/T service in Belgium, 3718

split-channel system for, at 50 Mc/s, field test of, **3709**, at 50 Mc/s, operational experience of, **3710**, at 152–174-Mc/s, **3102**, **3706**, at 156·3 Mc/s, tests in Syracuse, **3707**

20-kc/s split-channel system for, at 160 Mc/s, commercial experience with, **3708**

tests on frequency bands for, **823**, **1795**, **3711**

multiplex, frequency-division, distortion reduction in, **2788**

subcarrier bandwidth and response speed of, **3103**

time-division, **1793**

p.c.m., 12-channel, experimental, **1125**

p.p.m., directional, performance figures for, **2146**

radio services of West German Post Office, **539**

in Swiss army, development of, **1118**

telephony and telegraphy, between Turkey and the West, **2143**

v.h.f., multiplex, in Nyasaland, **1485**

review of, **547**

Components, for airborne electronic equipment, reliability of, **1939**

and materials, for reliable equipment, **2261**

microstrip, manufacture of, **823**, **1269**

new, on French market, **2529**

nonlinear, in h.f. and l.f. technology, **645**

tests under tropical conditions, **1713**

Computers, (See also Correlators)

analogue, for arc tan ω, **3642**

continuously variable voltage source for, **1056**

for correlation functions, **161**, **453**, **3047**

differential analysers, C.S.I.R.O., **1049**, universal unit for, **146**

diode-bridge limiter for, **2367**

effect of regenerative loops in, **3647**

electronic, 5-channel, **2366**

electronic function generator for, **451**

elements of, **3043**

for Fourier analysis of seismic transients, **2719**

for geophysical data, **2718**

high-speed, for product integrals, **2058**

for hydraulic remote-position-control servomechanism, **1054**

linear-to-logarithmic voltage converter for, **3042**

for magnetic electron lenses, **2722**

for mechanical systems, diode limiters in, **448**

for mine ventilation networks, **3349**

MONECA, for motor-performance calculations, **765**

multiplier circuit for, high-accuracy, **151**, using modulated pulses, **1417**

photoformer design and performance, **452**

for radiation pattern of aerial array, **3198**

Computers, analogue, relative merits of a.c. and d.c. as signal source in, **2717**

resistor-network, **2059**, for biharmonic functions, **1727**, for waveguide and cavity-resonator problems, **(A)150**

for servomechanism design, **1055**

for solving algebraic equations, **3044**

for solving differential equations, use of extrapolation techniques with, **1416**

for solving nonlinear differential equations, **2372**

torque-type, **2364**

for use in loudspeaker design, **3050**

analogue and digital, characteristics of basic units for, **2363**

interconversion of data for measurement and control systems, **2365**

digital, automatic programme planning for, **147**

built on sub-unit principle, '401' model, **2368**

chess-playing, basic features of programme for, **3046**

C.S.I.R.O. Mark I, **1050**, magnetic-drum auxiliary storage system for, **3646**

DINA, for Laplace, Poisson, diffusion and wave equations, **3045**

EDVAC, **2060**, input-output system of, **2371**

electronic, logical symbols for circuit elements of, **1052**, physical realization of, **447**

ERA 1101, design features of, **1414**

Ferranti, photocell input-tape reader for, **1418**

ferroelectric materials as storage elements for, **1053**, **3049**

'floating address' system for, **1722**

Göttingen G1 and G2 models, **1723**

information transfer from punched cards to binary system, **3644**

magnetic-disk pulse-storage device for, **494**

magnetic recording heads for, design of, **768**

magnetic storage devices for, **3351**, magnetic-shift register, **3352**, multistable, **449**, rapid-access, **1724**

at Manchester University, multiplication process in, **1051**

micro-programming and design of control circuits in, **2716**

number-display unit for, high-speed, **2370**

Numerograph recorder for, **1726**

optical encoder and digit register for, transistor-type, **766**, **2373**

parallel, gating method for, **2374**

plug-in etched-circuit units for, **2263**

programme for 'learning' by, **1415**

programme-controlled, present development in Germany, **1725**

regenerative amplifier for, **769**

serial adders for a variable radix of notation, **3645**

storage systems in, bibliography on, **3648**, c.r.-tube, Scotch-plaid raster for, **3649**, matrix-type, **1728**

transistor shift register and serial adder for, **767**

transistor units for, **1729**

use in control systems, **3075**

use of ferrites in, **2061**

use of Ge photodiodes for reading tape input in, **454**

use of single-core magnetic amplifiers in, **3048**

Whirlwind I, **446**

digital-to-analogue converter for, **148**, **450**

integrator for products, **149**

multiplier for, time-division, stabilized, **3643**

punched-card-controlled, for aircraft navigation, **2674**

statistical tabulator for l.v. randomly varying quantities, **2369**

Conduction, electronic, in crystals, sign of e/m for, **1301**

mean free path of electrons in Bi, **996**

in metals with positive Hall effects, e/m ratio for carriers in, **700**, **1300**

Conductivity, electrical, of MgO single crystals, measurements of, **2327**

ionic, in solids, pre-exponential factors in formulae for, **3578**

of ionized gases, **2291**

of water, ethyl alcohol and soil, at λ 8·6 mm, measurement of, **3655**

Conductors, of arbitrary cross-section, h.f. resistance of, calculation of, **3188**

galvanomagnetic effects in, review of, **1974**

round, a.c. resistance and reactance of, **1918**

Conferences and conventions, application of radar in meteorology, Montreal, September 1952, **1361**; applications of communication theory, London, September 1952, **1480**, **2432**, **3601**, **3702**; cathode electronics, Kiev 1951, **892**; C.C.I.F., 16th plenary assembly of, Florence 1951, **533**, **1120**; C.C.I.R., Stockholm 1952, European broadcasting, **211**, **534**, **1799**, u.s.w., **1488**; electrical engineering measurement technique, Delft, May 1952, **154**; Electrical Engineering U.D.C. committee, Copenhagen 1952, **2191**; electron microscopy, Bristol, September 1952, **1771**, Tübingen 1952, **190**; electron optics symposium, London, May 1953, **3681**; electronic instruments symposium, September 1952, **1217**; h.f. electrical measurements, Washington, January 1953, **3651**; I.E.E., British contribution to television, 1952, **243**, symposium on insulating materials, March 1953, **2351**; information theory, London 1950, full report, **2134**; international electroacoustics congress, June 1953, in Netherlands, **2855**; I.R.E., Australia, 1952, **598**, National Convention, New York, March 1953, **1873**; magnetism, Washington, September 1952, **2292**; microwave physics, Oxford, July 1952, **985**; powder metallurgy, Austria, June 1952, **1412**; radio, international, 1946–1951, frequency-spectrum work of, **1124**; radio noise symposium, **693**; semiconductors, Kiev 1950, papers at, **419**; U.E.R., magnetic sound recording, Hamburg, November 1952, **1577**; U.R.S.I., 10th general assembly of, Sydney 1952, **2521**, **2522**

Connectors, plug and socket, multiconductor, printed, **2239**

Contact potential, calculation of, **2286**, **2287**

measurement of, comparison of methods for, **993**

variable-capacitor method for, **3259**

of semiconductors, experimental investigation of, **1696**

——**resistance,** of two granular metal films, **3258**

Contacts, initiation of discharges at, **3579**

metal, at low voltages, in adverse environments, **3496**

noise in due to passage of d.c., **3498**

Pt, effect of circuit inductance on fine transfer between, **3495**

for vibratory converters, long-life, **3497**

Control, (See also Electronic applications; Frequency control; Servomechanisms; Telecontrol)

electronic, of glass-grinding machines, **3379**

of high-power industrial equipment, using magnetic amplifiers, **176**

——**systems,** automatic, design criteria for, **2450**

design of, **1760**

feedback, compensation of, **1135**

nonlinear, stabilization of, **1761**

synthesis of, **3720**

sampled-data, analysis of, **(A)1801**

comparison of sampling with a.m. for, **3722**

with time delay, theory of, **2087**

Converters, (See also Frequency converters; Image converters)

d.c./a.c., gas-tube, for low direct voltages, **2456**

induction galvanometer, **3666**

utilizing valve space-charge capacitance, **1600**

vibrating-capacitor, and application to contact-potential measurement, **475**

negative-impedance, using transistors, **2582**

Cores, with air gaps, alternating-field losses in, **1721**

ferrite, high-μ, complex permeability of, **1705**, measurements on, **1032**

ferroxcube, rod and tube, losses in, **3636**

gapless, for magnetic amplifiers, production testing of, **471**

powder, for military communication equipment, **436**

toroidal, with one or two air gaps, magnetization of, **2584**

Correlation methods, for detection of weak signals, **2124**

determination of output spectra of detectors by, **3699**

Correlators, analogue, 5-channel, **2720**

filtering of clipped signal plus noise in, **532**

for microwave signals, **1067**

thermistor-bridge, **3350**

Cosmic radiation, r.f., (See also Astronomy, radio; Solar radiation)

from galactic hydrogen, at 1·42 kMc/s, **96**, **718**

from galaxy, and cosmic rays, possible relation between, **97**

effect of H II regions on, **3278**

origin of, **1331**

use for investigation of ionospheric irregularities, **722**

positions of six discrete sources of, **717**

from stars, at 81·5 Mc/s, ionospheric refraction of, **407**

from supernova (A.D.1572), at 158·5 Mc/s, **95**

Counter tubes, (See also Valves)

cold-cathode, decade, Type-6167, **1867**

gas-filled, principles and operation of, **3763**

rotating-beam, decade, **2515**

Counters, with Ar and methylene-halide filling, **1461**

binary, reversible, transistor, **650**, **2243**

coincidence, using Type-6BN6 gated-beam valves, **512**

G-M, Ar- or (Ar-CO_2)-filled, discharge mechanism in, **1462**

(Ar-Br)-filled, properties of, **1463**

battery-operated, **3682**

effect of dead time of, **1464**

end effects in, **2411**

with external cathode, application of Wilkinson's theory to, **3389**, C_2H_4 and C_2H_6O as quenching agents in, **2105**, with pure methyl-alcohol filling, **3067**

limitation of discharge in, **3390**, circuit for, **73**

l.v., gas-filled, **3085**

production range of, **797**

self-quenching, with external cathode, characteristics of, **3089**, with external cathode, photosensitivity of, **3088**, factors affecting life of, **2104**, functioning of, **3086**

space-charge sheath in, **798**

for X-ray interference measurements, **799**

Maze-type, with external cathode, construction of, and characteristics in range 0°–50°C, **2106**

pulse, bibliography on, **649**

scale-of-ten, using 4 double triodes, **2242**

scale-of-two circuits, coupling of, **950**

scintillation, discrimination against noise in, **191**

resolution of, improvement of, **2107**

self-quenching, parallel-plate, vapour-filled, **796**

ternary, high-speed, **50**

Couplers, aerial, Π-network, design of, **(D)2588**

bidirectional, resistive T networks as, **2592**

directional, for s.w. reflection measurements, **477**

Transvar, **2931**

wide-band, for power-line carrier equipment, **359**

Coupling coefficient, of i.f. transformers, measurement of, **3658**

of toroidal coils, simple method of, **3554**

Crystals, (See also Piezoelectric crystals; Quartz crystals)

CdS, single, method of growing, **135**

electronic states under strong applied fields, **736**

single, ZnO with excess Zn, optical and electrical properties of, **3628**

synthetic, recent applications of, **1046**

Current, distribution in cylinders, **1650**

electric and diffusion, relation between, application to E-layer displacements, **385**

D

Demodulation, magnetic, **3400**

Detection, linear, of a.m. signals, **208**

of randomly modulated carrier, for pulsed radar, statistical theory of, **3602**

synchronous, of a.m. signals, **528**

of weak signals, by correlation methods, **2124**

Detectors, crystal, Si, **2190**

Si and Ge, conductivity of and flicker effect in, **2189**, flicker effect in, **1047**

diode, efficiency and damping of, **1195**, **2129**

ionized gas, for microwaves, **530**

linear and square-law, correlation method of determining output spectra of, **3699**

linear, square-law, and 3/2-power-law, signal/noise characteristics of, **529**

Dictionaries, radio, English-French, A–C, **597**

Dielectric constant, of absorptive liquids at cm λ, interferometer measurement of, **461**

coaxial-line measurement equipment for range 100–300 Mc/s, **481**

and complex permeability, measurement of at u.h.f., **2381**, optical method for, **995**

of fluids, measurement at cm λ using coaxial-cylinder method, **1734**

of gases, at cm λ, **1063**

of heterogeneous mixtures, theory of, **1693**

of ice, anisotropy of, **2027**

of Rochelle salt, at 3 kMc/s, cavity-resonator method of measurement of, **2729**

of solids and liquids, measurement of, at cm λ, **2067**, results at 9·5 kMc/s, **2068**, using waveguide methods, theory of, **2069**

of uniaxal crystals, measurement by cavity-resonator method, **2382**

of water, ethyl alcohol and soil, at λ 8·6 mm, measurement of, **3655**

of water films and composite mica/water blocks, **1040**

of water in wet clay, **99**

——**loss** angle, bridge method for measurement of, **781**

in solid insulating materials, representation of, **2354**

——**properties,** (See also Insulating materials)

of dipolar materials, frequency dependence of, **1647**

measurement of, by bridge methods, at 80 c/s–40 Mc/s, **3057**

of polar liquids at u.h.f., [illegible]

of polyethylene terephthalate (mylar), **440**

of poor insulators, double-resonant-circuit method of measuring, **3330**

of solids, u.h.f. measurement of, **3656**

theories of, **1692**

of water and of human blood, at u.h.f., **139**

of zirconates, stannates and titanates of bivalent metals, **433**

Dielectrics. See Insulating materials.

——, **artificial,** including arrays of conducting elements, properties of, **2962**

made of conductive particles embedded in wax, **2326**

isotropic, theory and properties of, **(D)113**

for microwave lenses, refractive index of, **3652**

variational methods for, **2325**

Diffraction, (See also Wave propagation, e.m.)

acoustic, by aperture in plane screen, **1881**

by circular apertures, **1557**

by small circular aperture, **3170**

of cm waves, application of Kirchhoff's theory to calculation of, **1296**

by circular aperture, of diameter < λ, **1666**, of diameter > λ, **1667**

by metal cylinder, theory of, **1665**

by diaphragms with slits, in rectangular waveguides, **1583**

by diaphragms in waveguides, **625**

of e.m. or acoustic pulse, by 90° wedge, **986**

of e.m. waves, by aperture in conducting screen, **1293**

by apertures in plane conducting screens, **710**

by circular aperture, **1294**

by conducting circular disk and by circular aperture in conducting plane screen, **3270**

double-approximation method of analysis of, **1295**

by an edge and by a corner, **711**

by half-plane, **88**

by slit, **3269**, exact solution for, **1971**

by thick semi-infinite perfectly conducting plate, **2295**

three-dimensional problem of, **1972**

of e.m. waves from dipole, by half-plane, **2296**

grating, microwave, experiment with, **1246**

plane, e.m. properties of, **3588**

of plane e.m. waves, by circular aperture, **2625**

of plane sound wave, by paraboloid of revolution, **3169**

rigorous theory of, uniqueness of solutions in, **373**

simplifying technique in solution of problems of, **374**

of sound pulse, by nonrigid semi-infinite plane screen, **602**

by oscillatory long strip, **601**

theory of, inconsistency in, **696**

of v.h.f. waves by hills, **3091**

Direction finders, c.r.o. and goniometer types, comparison of, **1367**

polarization errors of, classification of, **(D)2008**

——**finding,** effect of buried cables on accuracy of, **2997**

and ionospheric anisotropy, **2318**

m.f., in aircraft, origin of errors in, **414**

Discharge, (See also Breakdown)

between coaxial cylindrical electrodes in transverse magnetic field, **1655**

corona, suppression methods for, **1306**

currents, self-maintained, control by cathode illumination, **3264**

gas, British Association discussion on, **701**

effect of superposed r.f. field on, **3263**

at electrical contacts, initiation of, **3579**

Discharge, gas, h.f., characteristics and mechanism of, **1961**, electrodeless, in magnetic field, resonance in, **85**, measurement of admittance and electron density of, **463**, between plane plates, low running potential of, **703**

low-pressure, reliability of probe measurements in, **381**

microwave determination of electron density in, **380**

shot noise in, **2185**

at single electrode, at 31·7 Mc/s, **1307**

Hg-vapour, absorption and reflection of microwaves by, **1656**

microwave admittance of, **1654**

in magnetic fields, investigations of, **1653**

mechanism of, **1652**

spark, in N_2, time lag of field breakdown in, **1308**

between positive point and plane in compressed air, **3265**

in transverse magnetic field, theory of, **84**

——**tubes,** (See also Valves)

cold-cathode, switching applications of, **288**

Type-2313, for switching systems, **538**

corona, for voltage stabilization, **1136**, **(D)2803**

glow, voltage-regulator, characteristics of, **(D)267**

hot-cathode, oscillatory phenomena in, **2959**, **2960**

Discriminators, frequency, for f.m. reception and a.f.c., **684**

using quartz-crystal circuit, **1277**

u.h.f., frequency-stabilized, **2386**

Distance measurement, by echoes, optimum signal characteristics for, **411**

Distortion, amplitude and phase, effect on limited-spectrum signals, **1177**

in video amplifiers, relations between, **980**

in anode-modulated transmitters, **262**

in class-A push-pull amplifiers, **2610**

due to curvature of valve characteristics, **1854**

'difference-diagram' method of diagnosis of, **2383**

in f.m. reflex klystrons, **1545**

of f.m. signals in tuned interstages, evaluation of, **3550**

in f.m. systems, calculation of, **2141**

due to perfect reactance valve, **3104**

due to small loss and phase variations, **1484**

in frequency-division multiplex systems, reduction of, **2788**

group-delay, in transmission system, measurement of, **1076**

harmonic, in f.m. or ph.m., **1282**

meter for, theory and construction of, **1078**

in negative-feedback amplifiers, **2278**, **(D)3253**, **(D)3568**

intermodulation, in multichannel radio systems, **1796**

significance and measurement of, **1737**

measurement, double-tone and intermodulation methods of, comparison of, **163**

meter, rectifier-type, direct-reading, 0·5–30 %, **167**

modulation, in television reception, **260**

due to multipath transmission, in f.m. u.s.w. R/T beam link, **218**

nonlinear, in broadcasting-studio a.f. equipment, measurement of, **2735**

comparison of measurement methods, **2734**

in gramophone reproduction, measurement of, **2736**

intermodulation methods of measurement of, **2737**, rigorous basis of, **3059**

of progressive sound waves, **1553**

in transmission of musical intervals, perception of, **304**

in teleprinter signals, definition and c.r.o. measurement of, **3408**

E

Earth, rate of rotation of, changes of since 1820, **1332**

Electrets, **74**

mathematical theory of, **3257**

plastic, experimental investigation of, **2025**, **3323**

Electric field, above and below infinite corrugated sheet, **2965**

2-dimensional, correlative property of, **3573**

Electrical quantities, sinusoidally varying, vector representation of, **1919**

Electrodynamics, nonlinear, theory of, **1969**

unified gravitational field theory of, modification of, **1291**

Electroluminescence, explanation in terms of glow discharge, **1644**

refutation of, **3255**

field strength and temperature of $ZnS_{0\cdot4}Se_{0\cdot6}$:Cu powders in thermoplastic matrix, **3575**, **3576**

initial rise of brightness under action of alternating field, **2282**

measurements on lamps and studies of phosphors, **2956**

new light source, **3256**

of ZnS-Cu phosphor, **2283**

Electrolyte tank, accurate mapping of e.s. fields in, **2739**

Electromagnetic field, in conducting medium, of electric dipole, **2109**

of magnetic dipole, **39**, **2413**, **3202**

impulse, **38**, **(D)1591**

in plane of circular aperture, for incident spherical waves, **1667**

of rotating uniformly magnetized sphere, **1334**

——**theory,** circulation in flow of electricity, and Dirac's new variables, **1645**

current distribution in disk rotating in magnetic field, **1313**

general relativistic equations for material medium, **1956**

Maxwell's equations, general solutions of, **2294**

Poisson-Kelvin hypothesis and theory of dielectrics, **994**

simplified form of relativistic e.m. equations, **707**

Electrometers, logarithmic scale 10 V–1 kV, **3364**

Electron beam, entering axial magnetic field, characteristics of, **2638**

deflection systems for, and their aberrations, **2842**

focused, electron-charge spreading of, **2962**

focusing of, optimum space-charge-controlled, **901**

  - in rotating magnetic fields, nonoptical theory of, **3580**
- high-energy, radiation from, **3582**
- low-noise, **1183**

Electron beam, magnetic-field focusing of, **175**
- modulated, measurement equipment for, **263**
- reflected, space-charge spread of, **2961**
- space-charge-wave propagation in, **268**, **3450**
  - influence of Lorentz force on, **2182**
- in static e.m. fields, imaging properties of, **1657**
- velocity distribution in, change of, **2493**

——emission, (See also Cathodes; Photoelectric emission)
- field-type, from CdS and CdSe, **1391**
  - from surface films, **3267**
  - and work function, of crystal surfaces, **1963**
- secondary, from Ag and Cu films for primary-electron energies < 10 eV, **1658**
  - from BaO, **895**
  - from cold-worked metals, **1390**
  - determination of origin of electrons, **2336**
  - from dielectrics under single-pulse conditions, **3008**
  - field-dependent, mechanism of, **998**
  - measurement of, errors in, **3581**
  - from metals, after irradiation, **3266**, due to Li$^+$ ions, **384**, **2631**
  - from Ni, angular distribution of, **584**
  - theory of, **705**
- thermionic, correction to Schottky's equation, **1861**
  - energy distribution of electrons in, **2963**
  - flicker effect in, temperature dependence of, **3150**
  - pulsed, electron-velocity distribution in, **2837**
  - from various materials, survey of, **2832**
  - work function of, graphs for calculation of, **3583**
- thermionic and secondary, from BaO during electron bombardment, **2184**
- thermionic constants, of metals of the first transition group, **1392**
  - of monovalent metals, **2700**
- from valve grids, and its elimination, **899**

——gas, magnetic properties of, and number theory, **991**, **992**

——guns, single-velocity, noise analysis of, **1848**

——lenses, astigmatism of, **2097**
- e.m., sector-shaped, angular aberrations in, **3680**
- e.s., aperture, focal properties and spherical-aberration constants of, **188**
  - cylindrical, with three slits, field of, **2094**
  - determination of electron trajectory by successive differentiations, **2096**
  - electron-optical properties of, **795**
  - for focusing high-energy particles, **2409**
  - for focusing very-high-energy particles, **1769**
  - immersion objective, low-voltage, experimental investigation of, **2410**, with plane electrodes, **1458**, **1770**, resolving power of, **186**, **187**
  - paraxial trajectories in, **510**
  - potential distribution in, **3383**
  - single, permitting rigorous calculation, **2095**
  - spherical aberration of, calculation of, **1100**, measurement of, **1459**
  - with thick electrodes, axial potential distribution of, **1102**
- grid-type, spherical aberration of, **1101**
- magnetic, asymmetry of, **2098**
  - axial field of, approximate formula for, **2099**, electrodynamic measurement of, **1743**, measurement of derivatives of, [illegible]
  - with axial field γ/z^n, **189**
  - effect of pole-piece saturation in, **3386**
  - remanence in soft-iron circuits of, **2102**
- and quadripole networks, analogy between, **2760**
- with radially decreasing magnetic field and cylindrical electric field, focusing properties of, **1460**

——microscopes, device for selecting specimen detail for observation, **3080**
- direct measurement of images in, **2759**
- emission-type, image aberrations due to cathode irregularities of, **3081**
  - surface images obtained with electrons due to bombardment by ions, **2757**, **3388**
- e.s., with intermediate accelerator, h.f. h.v. equipment for, **2103**
  - for laboratory, construction details of, **2101**
- magnetic circuit in lenses for, **3385**
- R.C.A. Type E.M.U., objective-aperture centering and interchanging device for, **2758**
- reflection-type, **1457**
- scanning-type, **1768**
  - improved, for opaque specimens, **3382**
- small, design of, **2756**

——microscopy, field-emitter fabrication and application, **3082**

——motion, in Coulomb electric and uniform magnetic fields, **1648**
- in electric and magnetic field, analysis of, **76**
- in field of uniformly wound toroid, **383**

——multipliers, (See also Photocells)
- with BeCu plates, activation of, **1517**
- development of, **3139**
- theory of and experiments on, **289**

——optics, double focusing of charged particles with wedge-shaped magnetic field, **1456**
- ideally focused systems, space-charge requirements in, **3384**
- spherically corrected systems, adjustment of, **2100**
- third-order aberrations of centred systems, calculation of, **3083**

——trajectories, automatic tracer for, **476**
- calculations of, **511**
- determination by successive integrations, **1767**
- in e.m. and e.s. fields, calculation of, **77**
- rubber-membrane model for study of, **3756**

Electron **tubes**, (See also individual types)
- for industry and research, classification of, **587**

Electron-ion streams, propagation in, **1316**

Electronic applications, (See also Control; Heating; Photocells, applications of)
- acoustic firing-error indicator, **192**; aircraft-vibration research, **491**; cable-diameter measurement, **791**; camera-shutter testing, **2750**; contour recording and reproduction using magnetic tape, **1449**; control of soldering machines, **193**; electronic balance, rapid, **3685**; food sterilization by h.v. electron beam, **505**; industrial uses of 'Magamps', **945**, **1095**; inspection of wire ropes while in service, **503**; magnetic method for testing winding ropes, **3378**; measurement of pH, **3683**; measurement of spray particles, **3684**; measurement of velocity of explosion-wave fronts, **2086**; nonquantized f.m. altimeter, **3311**; prevention of drill breakage, **2088**; resistance-welding control, **502**; speed-sensing relay, **499**; tachometer, **2747**; in textile industry, **177**, **504**; viscometer with servomechanism, **3673**

Electronic engineering, sources of information on, **2192**

Electrons, atomic mass of, and Rydberg constant, **697**
- charge on, determination from shot-noise measurements, **1959**
- deflection by charged filament, **1299**
- Dirac's equation of, application of Schwinger's variational principle to, **2626**
- Dirac's new theory of, angular momentum in, **1297**
  - discussion of, **990**
  - energy momentum tensor in, **1298**
- fast, charge on, measurement of, **2957**, **2958**
- kinetic energy of, influence of magnetic impulses on, **2300**
- mobility in strong e.s. fields, **1302**
- photo- and exo-, use for surface investigations, **2301**
- velocity distribution after passage through matter, **704**

Energy flow, calculation by means of Laplace transform, **955**

Equalizers, attenuation, performance of, **2594**
- variable, for broadcast programme circuits on trunk lines, **820**

Exhibitions, A.P.A.E and B.S.R.A., London 1953, a.f. equipment at, **2531**; Audio Fair, 1952, **1218**; British Instrument Industries, July 1953, **3162**; components, Paris 1953, **2262**, **3547**; Paris Fair, 1953, radio and television receivers at, **3398**; Physical Society, 1953, **2523**, **2524**; R.E.C.M.F., April 1953, **1618**, **2524**; S.B.A.C., Farnborough 1952, **226**, **1216**; Scientific Instrument Manufacturers' Association, London 1952, **1547**; Technical Fair, Hanover 1952, **166**, **178**, **299**; Television Society, December 1951, **232**; 2nd Television Salon, Paris, October 1952 **845**; 6th R.S.G.B. amateur-radio, **1215**; 19th National Radio, London 1952, **300**, **301**; 20th National Radio, London 1953, **3163**, **3765**

Experimental curves, successive differentiation of, and method of smoothing, **2619**

——results, representation by equations, **370**, **371**

F

Facsimile, high-speed system, direct-scanning, **(A)841**, **3730**

- electronic, variable-bandwidth, synthesis of, **2925**
- with generalized parameters, calculation of, **(C)56**
- ladder, attenuation chart for various types of, **(A)961**, **3544**
  - design of, **1932**
  - effects of terminations on insertion loss of, **2596**
  - low-pass, formulae for, **666**
- lattice, antimetrical, theory of, **2597**
- low-pass, linear-phase, design of, **1614**
  - Tchebycheff-type, formulae for, **962**
- with minimum number of inductors or capacitors, design of, **2595**
- with minimum number of resonators and minimum no-load Q, **3543**
- multiple-resonant-circuit, alignment of, **(C)1268**
- *n*-mesh, *RC*, admittance and transfer functions of, **1934**
- nonlinear, for detection of sine-wave signals in noise, **206**
  - optimum, **2598**
- optimum, for detection of signals in noise, **205**
  - linear, Wiener's theory of, simplified presentation of, **2260**
  - new procedure for design of, **2924**
- r.f. and i.f., transient response of, **(A)350**, **963**
- semifinite-terminated, design of, **2923**
- statistical, nonlinear, **667**
- and switches, u.h.f., for London/Birmingham television relay link, **951**
- Tchebycheff-type, numerical calculation of, **668**
- theory and technique of, fundamentals of, **665**
- transfer function of, synthesis of, **1611**
- and transmission lines, transient response of, formulae for, **1248**
- waveguide, direct-coupled, narrow-band, synthesis of, **58**, **(D)3234**

Fluctuations, (See also Noise)
- electrical, theory of, **2288**
- random, history of investigations of, **908**

Fluoroscopy, electronic intensification of images in, **1098**

Fluxmeters, rotating-coil, **1430**

Frequency, (See also Analysers; Analysis)
- absolute, estimation of in 1950–1951, **(A)153**, **1058**
- allocations, international, for maritime distress signals, **829**
- calibrator, 0·25–250-Mc/s, **1751**
- changers, magnetic-cross, for subharmonic generation, **3502**
  - using Type-DK92 heptode, for 3·3–30 Mc/s, **818**
- control, automatic, theory of, **3214**, **(C)3524**
- converter, for adapting s.w. receiver to 200-kc/s reception, **3698**
- dividers, locked-oscillator, using nonlinear elements, **1281**
  - stable, using thyrite elements, **3560**
- elimination, by transconductance bridge, **59**
- instantaneous, concept of, **2908**
- measurement, accurate, **1069**, a.f., **1738**
  - of f.m. transmission, by pulse counting, **3660**
- meter, automatic, for very low frequencies, **3375**
  - cavity-resonator, for range 22–37 kMc/s, **3668**
  - direct-reading, 30 c/s–30-Mc/s, **171**
  - reed-type, 5–270-c/s, **1079**
- rapidly varying, instantaneous measurement of, **1428**
- rate indicator for mains-frequency control, **1137**

Frequency, stabilization. See Stabilization, frequency.
- standard, (See also Standard-frequency transmissions)
  - N.B.S., improvements in, **1731**
  - 1-Mc/s, derived from WWV signal, **456**
- substandards, microwave, N.B.S., and calibration service, **2063**
  - using transistor oscillator and 100-kc/s quartz crystal, **2064**, **3051**
  - 100-c/s–100-kc/s, portable, **3070**
- synthesis, for range 1 kc/s–100 Mc/s, **2376**

G

Galactic radiation. See Cosmic radiation

Galvanometers, coupled, Brownian fluctuations in, **2077**
- induction, as sensitive d.c./a.c. converter, **3666**
- matching of thermocouples to, **2387**
- moving-coil, extreme-sensitivity, **2076**
- resonance, transformer-coupled, **2388**
- valve, logarithmic-scale, **3363**

Generators, (See also Noise; Oscillators; Signal generators; Sound)
- e.s., rotary, 100-kV, **2459**
  - van de Graaff, 1-MV, for ion accelerator, **184**
- h.v., Cockcroft-Walton voltage-multiplying circuit for, **2151**
  - for c.r.o. and television equipment, **2812**
- impulse, 3-MV, standard-waveform production with, **974**
- surge-wave, repetitive, **1088**

Geomagnetic storms, and aurora, theory of, **1013**
  - 35- and 74-Mc/s pulse echoes during, **2976**
- characteristics of storm of 3rd Aug. 1949, **2644**
- M-type, correlation with monochromatic corona, **2975**
- morphology of, **2645**
- new theory of, **2646**
- polar, constitution of, **2977**, **2978**
- recurrence tendency of, **2974**
- reverse pulse preceding sudden commencement of, distribution of, **2973**
- and sunspots, **2641**
- theory of movement of, **100**
- Jan.–June 1952, **400**, March–Sept. 1952, **1339**, July–Dec. 1952, **1988**, Oct. 1952–March 1953, **3284**

Geomagnetism, correlation with solar activity, **1011**
- disturbances, diurnal and storm-time variations of, and ionosphere, **3300**
  - international data, first quarter 1952, **401**, second quarter 1952,

1340, third quarter 1952, 1989, fourth quarter 1952, 3285
    variation of recurrence interval with solar cycle, 1835
  field for epoch 1942, harmonic analysis of, 3279
  field variations, during bay disturbances, 2972
    diurnal, and electrical conductivity of upper atmosphere, 2647
    eleven-year, analysis of, 1337
    mean, and secular, in Adélie Land, May 1951–Jan. 1952, 2305
    and rate of earth's rotation, 1338, 3281
    secular, at Colaba and Alibag, India, 399, in New Zealand, 3282
    solar-flare type, and integrated conductivity of ionosphere, 2663, 2664, 2665, 2666
    two-dipole model for, 1012
  K-indices, at Abinger, Eskdalemuir and Lerwick, July–Aug. 1952, 396
    at Cheltenham, April–June 1952, 397, July–Sept. 1952, 1336, Oct.–Dec. 1952, 1987, Jan.–March 1953, 3280
  micropulsations, statistical treatment of, 2643
  and sunspots, 2642
Geophysical prospecting, equipment for, 2749
Graphite, artificial, resistivity of, influence of coke-calcining temperature on, 1041
  crystal structure and physical properties of, 1411
  electrical properties of, 2051
Ground, conductivity of, determination from wave attenuation and range data, 3687
Gyrators, (See also Faraday effect)
  acoustic, 1874, 2532
  using Faraday effect in plasma, 1285, 3232
  using Hall effect in Ge, 1930
  microwave, using ferrite-cored waveguide, reduction of loss in. 1610
  three-terminal, 3228

H

Hall effect, a.c., in semiconductors, recording apparatus for, 1057
  in BaO single crystals, 129
  in Fe and Ni, temperature variation of, 1706
  measurement of, geometrical arrangement in, 3054
  and related thermomagnetic and galvanomagnetic effects, 713, (C)2975
  and resistivity, connection between, 1319
  in Ti, 2049
Hearing aids, using transistors, commercially available models, 1903
  audibility of frequency vibrato, influence of nonlinear distortion on, 2870
  masking of tones by noise as function of interaural phase. 9
  and memory for acoustic effects, 306
  perception of a.m. and f.m. of pure tones, 303
  perception of a.m. tones. 1883
  perception of nonlinear distortion in transmission of musical intervals, 304
  process of speech perception, 920
  stereophonic, theory of, 2546
  threshold of, for loudness and pitch variations, 1882
Heating, h.f., dielectric, 1453, correlation of temperature and field strength during, 500
Heating, h.f., induction, bibliography on, 3676, for hardening band-saw teeth, 179, of metals, 1452

I

Image converters, as high-speed shutters in photography, 2751
  for observation of very-high-speed phenomena, 1763
Impedance, (See also Acoustics; Aerials; Networks; Transmission lines)
  acoustic, absolute measurement of, 917
    measurement of, by resonance method, 2545 by transmission-characteristic method, 2868, using water-filled tubes for, 2866
  characteristic, of coaxial cable, frequency-sweep measurement of, (D)3058
    electrical and acoustical, incomplete analogy between, 4
  complex, meter for, 30-c/s–15-kc/s, 2741
  diagrams, geometrical transformation of, 2576, 2907, (C)3494
  matching, frequency-independent transition between coaxial cable and balanced line, 3478
    with λ/4 sections, charts for bandwidth in, 30
    and measurement at v.h.f., 1747
    with modified exponential transmission lines, 3533
    with transmission-line transformer sections, 2249
    u.h.f., termination for waveguides or coaxial lines, 1073
    wide-band, of coaxial cable to waveguide, optimum piston position for, 1260, with directional coupler, 29
  measurement, a.f. to v.h.f., shunted-T circuit for, 1062
    equipment for range 50–500 Mc/s, 478
    on helix of travelling-wave valve, 3753
    microwave, using double-slug transformer, 774, 3-probe method of, 462
    u.h.f., equipment for coaxial cables, 2393
  meters, for crystal units, 2390
  of parallel conductors, proximity-effect formula for, 2918
  Smith-chart plotter, automatic, 3065
Impedors, termination, maximum power in, 1258
Induction, of current in wide conductor by narrow conductor carrying h.f., 81
  of currents in disk by creation of magnetic poles, 708
  magnetic, null method for measuring, 1744
Inductors. See Coils.
Instruments, measurement, error of, 1074
  for microwave measurements, (D)3362
Insulating materials, (See also Ferroelectric materials)
  araldite, properties of, 138
  BaTiO$_3$, transition energy and volume change in, 2063
  brush-discharge ionization in, 136
  ceramics, BaTiO$_3$-BaSnO$_3$-SrTiO$_3$, properties of, 1718
    niobates and tantalates, 137
    titanate, potential distribution in, 439
  glass, tellurite, 143
  glass-fibre paper, properties of, 1719
  glasses, borosilicate, power factor as function of composition of, 443
  IN-420 chlorinated impregnant, properties of, 3633
  laminated plastics, properties of, 2353
  liquid, fluorinated, properties of, (A)3037
  modern, r.f. properties of, 1716
  organic, new polymers and synthetic resins, 3634
  polyvinyl chloride, properties and application of, 1720
  rare-earth titanates with perovskite structure, 1717
  relation between breakdown strength and mobility of charges in, 1375
  relation between high-voltage polarization and intensity of electric field, 2681
  rubber, electrical properties of, 2055
  semiconducting ceramic glazes, properties of, 438
  SF$_6$, r.f. electric strength of, 3627
  silicone resins, for use at power frequencies, 2352
  silicone rubber, properties and applications of, 2054
  theory of, 1372
  TiO$_2$, properties of, 1048
  TiO$_2$ (rutile), effect of impurities on conductivity of, 2683
    physical properties of single crystals, 434
Intercommunication systems, noise reduction in, 2787
Interference, from automatic telephone apparatus, suppression of, 1476
  in broadcasting and television reception, problems of, 1179
  from carrier-current circuits on overhead power lines, reduction of, 1794
  co-channel, ground/air, at 2·9 kMc/s, 1798
  from electric railways, Swiss investigation of, 2131
  evaluation by means of noise filters, 2430
  from fluorescent lamps, suppression of, 2133
  in f.m. and a.m. reception from unwanted transmitters, 531
  from h.v. lines, investigation of, 2631
  from ignition systems, in television, relative sensitivity of vertical and horizontal dipoles to, 1180
  impulse, in television receivers, reduction of, 1843
  in long-wave reception, loop aerial for elimination of, 35
  measurements in aircraft, double-beam c.r.o. for, 2075
  in radiotelegraphy, due to adjacent-channel transmissions, 540
  from television receivers, reduction of, 2476
  in television reception, apparatus for demonstrating various types of, 2274
    from aurora, 1173
    from bus bells, 577
    from f.m. u.s.w. receivers, maximum value of, 867
    and its suppression, 2173
Interferometers, electron-beam, using 3-crystal beam splitter, 3074
  ultrasonic, 1223
Interferometers, ultrasonic, for high fluid pressure, 2542
Ionization, thermal, use of cm waves in study of, 3268
Ionosphere, (See also Absorption; Atmosphere; Recorders; Wave propagation, e.m.)
  abnormalities at high latitudes, 1672
  conditions in, and radio 'weather', 2417
  conductivity of, and 'dynamo' currents in, 1352, 1353
    integrated, and solar-flare type of variation of geomagnetic field, 2663, 2664, 2665, 2666
  currents, in auroral zone, 2648
    and geomagnetic tides, 2312
  D layer, formation of, 2652
    r.f. absorption over Singapore and Slough, 2660
  D and lower-E layers, model deduced from long-wave measurements 2306
  disturbances, forecasting of, 3288
    index for, 3302
    in N. America, maps of, 3296
    during severe geomagnetic storms, characteristics of, 2987
    of 23rd–28th Feb. 1952, 101
  effects of crossed magnetic and alternating electric fields in, 1995
  E layer, definition of critical frequency and measurement of ionization of, 721
    effect of solar eclipse 25th Feb. 1952, 1675, 1994
    h'f curve for, statistical study of minimum frequency in, 2654
    ionization in, determination by V-2 rocket method, 3291
    ionizing effect near sunrise, 1346
    lunar effects on, theory of, 385
    moving clouds of ionization in, 2310
    production in O$_2$-dissociation region, 723
    winds and turbulence in, investigation of, 1676
  E and F$_1$ layers, at high latitudes, solar effect on, 406
  E$_s$ layer, over Calcutta, nature and origin of, 3292
  electron collision frequency in, 3299
  electron density in, and layer heights of, 3598
    vertical distribution of, 409, (D) 1997
  F layer, effect of solar eclipse of 9th May 1948 on, 2658
    transient disturbances in, 404
    triple splitting in, 3295
  F$_{1\cdot5}$ layer at Dakar, and motion of sun, 1347
  F$_1$ and F$_2$ layers, comparative increases of ionization from sunspot minimum to maximum, 1993
  F$_2$ layer, critical frequency, variation with sunspot number, 2657. world distributions of, 2984
    disturbance in, relation to geomagnetic storminess, 2986
    electron density, below maximum-ionization level of, 1349, night variations of, 2656
    over equatorial Africa, effect of solar eclipse 25th Feb. 1952 on, 1327
    frequency-sweep measurements of height of, 3297
    longitude effect in, (D) 2307
    lunar effect on median height of, 405
    mechanism of electron removal from, 3298
    night-time recombination-coefficient and temperature variations of, 2662
    solar tides in, 1348
    storm phenomena in, 2982, 3304, classification according to characteristics and world distribution, 2983, geomorphology of, 1673
    variations accompanying geomagnetic storms, 3303
  frequency of occurrence of *f*E$_s$ and *fmin*F, 2985
  and geomagnetism, diurnal and storm-time variations of, 3300
    variations associated with, morphology of, 3301
  h't measurements at Wakkanai, Japan, during eclipse of 9th May 1948, 2659
  ionization over auroral zone during geomagnetic storms, 2991
  irregularities in, investigation by means of galactic r.f. waves, 722, 1674
    motion of, wave hypothesis of, 2655
  layer heights, calculation of, taking account of geomagnetic field, 3290
    measurements at oblique incidence over Eastern Australia, 807
  long-delay echoes at 150 kc/s, 1992
  low-level echoes, correlation with abnormally high absorption in, 519
  lower, long-duration back scatter of 33-Mc/s pulse signals from, 2000
  phase change of pulse echoes, measurement of, 3599
  properties of, rocket investigations of, 726
  recombination coefficient for, determination of, 2653
  recording stations, world list of, 2668
  research at Kodaikanal observatory, 392
  review for 1952, 1016
  shielding effect of, 2667
  'sluggishness' of, 3289
  sounder, automatic, 3356
    Berkner-Wells-Seaton type, improvements to, 725
    frequency-sweep, 724
    high-precision, 1677
    oblique-incidence, COZI communication-zone indicator, 3600
  storms, in auroral zone, 3293
    and F$_2$-layer geomagnetic anomaly, 2308
    Japanese investigations of, 2988
    warning system, B.B.C., 103, value of, 2110, (D) 2767
  sunrise effect at Kodaikanal, 1345
  travelling disturbances in, 3294
    diurnal variation of direction of, 2309
  winds in, heights of, long-wave measurements of, 2311
    measurements of, 1996, using 3-receiver technique, 720
Ions, gaseous, recombination of, review of, 999
  motion of, in strong electric field, 376, 1649

L

Laboratories, acoustics, at Physikalisch-Technische Bundesanstalt, Brunswick, 2
  electroacoustics, at School for the Deaf, Worcester, C.P., 3
Lenses, (See also Aerials; Electron lenses)
  ion, grid type, focusing properties of, 3387
  microwave, delay, metal strip, experimental verification of theory of, 3485
    effects of astigmatism on diffraction pattern and gain of, 1597
    excitation and radiation of, 3486
    lattice, for cm waves, 1595
    new type of, 987, 3483
    for phase correction with horn aerials, 1942
    refractive index of delay media for, 3652
    scanning aberrations of, 731
    spherically symmetrical, 1596
    for wide-angle scanning, 3484
  optical and electron, representation of by resistive quadripoles, 3064
  plastic, for high-intensity ultrasonic radiation, 915
Light, nature of, experimental investigations on, 1298
  velocity of, determination by band-spectrum method, 987
Lightning, air discharge and flash to ground, Boys camera study, 1682
    and positive charge at bottom of thundercloud, 1683
  radar observations of, 2003, 3306
  wave spectrum of, and propagation of very long e.m. waves, 802, 1772
Limiters, bandpass, signal/noise ratios in, 3401
  impulse-noise, diode, for mobile v.h.f. receivers, 2780
Loudspeakers, (See also Public-address systems; Sound)
  acoustic damping for, 3179
  baffles and cabinets for, 2201
  characteristics in relation to room acoustics, 3469
  corner-type, historical development of, 3178
  friction-driven, using electromechanical amplification, 614
  horn-loaded, 314
  Ionophone, as ultrasonic generators, 2539
  metal-cone, development of, 18, 313
  and pickups, objective testing of, 19
  reverberation-room measurements of efficiency of, 2873
  subjective and objective tests on, relations between, 2202
  transient distortion in, assessment of, 17
Luminescence, (See also Electroluminescence; Phosphors)
  of alkali halides after c.r. excitation, decay of, 2880
  of layers and films with polyvinyl alcohol as binder, 2955
  quenching action of r.f. field on, 1370

M

Magnetic field, of current element near edge of conducting half-plane, 2967
  above and below infinite corrugated sheet, 2965
  measurement with iron-cored magnetometer, 165
  due to permeable conducting sphere near coil carrying a.c., 2966
  and rotation of massive bodies, negative experiment on, 1333
  of thick plate with semicylindrical edge, 2293
——**force**, practical calculation of, 3587
——**materials**, measurements of moment, susceptibility and permeability, 472
——**properties**, of metals, theory of, 1004, 1005, 1967
  of stainless steel wire, 1708
Magnetism, antiferromagnetism and ferrimagnetism, review of, 1060
  definition of quantities in, 1966
  leakage flux of relays, calculation of, 387
  post-war developments in, 87
  relation between coercive force and crystal energy, 758
Magnetization, spontaneous, of antiferromagnetic single crystal, temperature dependence of, 3336
    condition for vanishing below Curie temperature, 3337
Magnetometers, microwave, based on Faraday rotation in ferrites, 1072
  rotating-iron, 1730
Magnetostriction, of Co and Ni ferrites, 1399
  constants of single crystals, 2045
  factors contributing to overall effect in, 130
  reversal of sign of by expansion, 1711
  in single crystals and multicrystal materials, 1976
  in strong fields, theory of, 3028
Magnets, permanent, iron-powder, 3038
    optimum design of, (A)3039
Mathematics, algebra for networks containing switches, 2913
  boundary-value problems, use of Tchebycheff-polynomial operators in numerical solution of, 2718
  differential equations, of oscillations, numerical and graphical integration of, 1413
    theorem in theory of, and application to analogue computers, 2721
    in theory of forced oscillations in triode circuit, 971
  Dirac's function, application in mathematical physics, 2621
  elliptic functions, coordinate systems associated with, 3347
  Fourier series, tables of, 2360
  Green's functions and impulse functions, tables of, 2360
  integral variant associated with wave equation, 144
  interpolation in series of correlated observations, 2362
  Laplace transformation, general rules for, 764
    interpretation of, 3041
  linear equations, systems of, solution by minimized iterations, 145
  linear stochastic operators, autocorrelation functions of, 3348
  Mathieu-Hill type equations, matrix solution of, 3640
  matrix, formula for power of, proof of, 2258
Mathematics, matrix calculus and use of 'normalized magnitudes' in electrical engineering, 3639
  Maxwell's equations, first boundary-value problem of, 1641
  prediction of nonstationary stochastic processes, theory of, 445
  probability theory, and application to e.m. propagation, 197
  step functions, resolution of, 763
  tabulated values of wave-theory function for complex arguments, 444
Measurement, (See also individual subjects)
  h.f., use of frequency converters in, 155
  techniques, for various components, 457
Metallization, of insulator surfaces, techniques for, 2346
  precious-metal, of insulating materials, and coating test methods, 2052
Metals, band structure of, review of, 2046
Meteors, night-time streams, 1946–1951, radar observations of, 108
  sporadic, velocity distribution of, 1009, 1010
  trail echoes, decay of, 1977, 1978
    double-Doppler investigation of, 398
    experimental study of, 1979
    long-duration, at 33 Mc/s, 2000
  1950 δ-Aquarid shower, radar investigation of, 1320
Meters, grid-dip, u.h.f., using series-capacitance-tuned oscillator, 2080
  ratio, for determination of reflection coefficient of transmission system, 466
  resistance and conductance, electronic, (A)170
  s.w.r., slotted-waveguide, for 9·5-kMc/s band, 3368
    using waveguide squeeze-section and c.r.o., 3066
Microammeters, integrating, for currents > 10^{-8}A, 1431
    d.c., with full-scale ranges from 10μA to 1 mA, 1745
Microphones, absolute calibration methods for, 3173
  capacitor, free-field reciprocity calibration of, 2544
    input resistance of, (D)16
    tension of diaphragms, measurement of, 2200
    Types M49, M50 and U47, 1230
  probe-type, for measurement of sound pressure, 1896
  ribbon-type, directional, 2199
  sensitivity to stray magnetic fields, 1897
  on surface of sphere, directivity of, 613
Microphony, in superheterodyne-receiver oscillators, 814
Microscopes, (See also Electron microscope)
  flying-spot, 1759, 3073
Microwaves, (See also Instruments; Measurement; Wave propagation, e.m.)
  industrial use of, possible dangers in, 1093
  physiological effects of, 2748
Mixers, crystal, microwave, calculations of characteristics of, 2941
  Ge-crystal, for u.h.f. receivers, testing of, 2063
  harmonic, using crystal diodes, 1791
Modulation, a.m., Rothman system of, 1181
  a.m. and f.m., spectra of, analysis of, 2790
  a.m., f.m., and ph.m., theory of, 2439
  comparison of different methods for directional radio links, 2791
  comparison of signal/noise ratios for different methods, 828
  definitions of terms for, 53 IRE 11S1 standard on, 2438
  frequency, by means of reactance units, fundamentals of, 2820
  index, of f.m. signals, oscilloscope determination from stationary phase points, 3071
  low- and high-level, for television transmitters, comparison of, 567, 568
  pulse, multiplex, pulse distributors for, 2142
    new method with reduced bandwidth, 3415
  pulse-code, delta, 3712, principles of, 543, simple method of producing, 2440
    systems of, 3106
Modulators, amplitude, using carrier-frequency switching pulses, 2177
  clamp-valve, carrier control with, 1182
  using class-B amplifiers without grid current, 3949
  frequency, using diode, 2486
    serrasoid, 1846
  using Hall effect in Ge, 1930
  magnetic, for pulsed radar, 2992
  phase, susceptance valves and reactance valves as, 3442
  rectifier, carrier-leak control by use of d.c. meter in, 580
    with frequency-selective terminations, input impedance of, 579
  using transistors, 1514
  for u.h.f. television, using spiral-beam valve, 2188, 2500
Monitoring, of B.B.C. unattended transmitters, 548
  international, E.B.U. station at Jurbise-Masnuy, 3416
  of radio-communication channels, automatic-scanning receiver for, 2129

  stations, N.W.D.R., 2149
Monitors, frequency-shift, c.r., B.T.R., 1436
  panoramic, multiband, v.h.f., for county police and fire-services' transmitters, 544
  for s.s.b. s.w. transmitter, 2175
  for television waveforms, 1736
  for u.h.f. television transmitter, 247
  waveform, Type-500, for recurrent waveforms, 482
Multivibrators, see Oscillators
Music, aesthetics of, conditions relating to, 1882
Musical instruments, electronic, 317
    'chord' organ, 616
    clavioline, 318

N

Navigation aids, (See also Radar)
  aerial, for civil aircraft, review of, 1024
    distance-measuring equipment, 3315
    errors in, dynamic aspects of, 412
Navigation aids, aerial glide-slope receiver Type 154A, 413
    instrument-landing approach-system steering computer, 1369
    loran, continuous-indicating equipment for, 2319, 2998
    punched-card-controlled course-line computer for, 2674
    survey of, 2996, 3419, with special reference to Holland, 2010
  beacon, small, SARAH, for location of lost airmen, 2995
  Decca, chart calculations for, 2009
    French service area and error curves, 3313
    site and path errors over land, 1025
  marine, aboard merchant ships and fishing vessels, 3418
    and radar, in ocean weather ships, 1023
    [illegible] chart-matching devices, 1022
  Rana, 3314
Networks, (See also Circuit theory; Filters)
  analysis by repeated voltage superposition, 655
  bridged-T, equalizing action of, 2254
  delay, with maximally-flat characteristics, applications of, (C)54, (D)2258
  group-delay time in, measurement of, 3659
  gyrator. See Gyrators.
  hybrid-ring, wide-band, for u.h.f., 960
  with input impedance or transfer admittance of constant magnitude or phase for varying load, 2251
  iterated, and application to differentiators, 2253
  ladder, exact amplitude/frequency characteristics of, 1267
    'reciprocal', properties of, 2589
    RX, response characteristics of, (D)3222
  lattice, *RLC*, synthesis of, 3535
  linear, active, transformations of, 956
    algebraic theory of, 3229
    with optimum signal/noise ratios, design of, 1927
    response to input with linearly varying frequency, 664
    theory of, 2245
  nonlinear, multipole, theory of, 3546
    steady-state response of, graphical analysis of, 3540
  notch, design curves for, 2255
  n-terminal-pair, synthesis of, 1617
  parallel-T, dual-input, 3537
    RC, analysis of, 661
  parameters of, determination of at v.h.f., 1435
  passive mathematical 'trees' for solution of, 2587
    measurement of 'A'-matrix elements of, 1605, (D)3227
    2-*n*-terminal, synthesis of, 1616
  phase-shift, simplified treatment of, 3230
  quadripole, analysis by method of general circuit constants, 2252
    cm-λ, experimental determination of characteristics of, 1733
    cm-wave attenuation factor of, measurement of, 2071
    with f.m. or ph.m., harmonic distortion in, 1282
    linear, equalization of transfer characteristics, 1936
    passive, rigorous theory of, 1264, transfer matrix in terms of image parameters of, 1604
    phase and group delay of, 2258
    reactive, impedance-transforming properties of, theorem on, 3541
    with reactive elements, synthesis of, 1263, 3538
    response to discontinuous signals, mathematical theory of, 957
    series-parallel, realizability conditions for, 3225
    synthesis theory for, 3226
    transient response of, calculation of from frequency response, 3542
    including transistors, terminology and formulae for, 2238
    waveform computations by time-series method, 55, 959, (D)1608
  RC, analysis of, 2593
    equivalent *Q* of, 2919, (D)3221
    maximum gain of, 1606
    multimesh, for phase-shift oscillators, 1627
    synthesis of transfer functions for, 1929
    tolerance coefficients for, 3224
    variable-frequency, with single variable element, 958
    3-terminal, cascaded, synthesis of, 656, paralleled, synthesis of, 3536
  reactive T or Π sections, conditions for resolution into matched half-sections, 2590
  RLC, unbalanced, synthesis of, 2256
  second fundamental theorem of, 2585
  with sine-squared impulse response, synthesis of, 348, (D)1609
  stability criterion for, 2231
  containing switches, algebra for, 2913
  synthesis of, approximation method for, 660, (C)2250
    potential-analogue method, 3530
  T, applications of, 1928
    resistive, as bidirectional couplers, 2592
  theorem for, and applications of, 62
    critical discussion of, 1607
  theory of, practical significance of complex frequencies in, 657
    Wiener's theory of stationary time series, 328
  time-equalizer, variable, for video-frequency waveform correction, 1178
  transformations to equivalent forms, 2586
  transformer, ideal, theorem on, 1266
  transient phenomena in, calculation by means of Fourier integrals, 1926
  varying-parameter, *n*-mesh, stability of oscillations in, 1271
  2-terminal, impedance functions of, 2248
    nonlinear, theory of, 3220
    theorems on, 3532
  2*n*-terminal, with minimum number of elements, synthesis of, 3228
  3-pole and multipole, equivalent circuits using negative 2-pole elements, 2247
Noise, (See also Atmospherics; Cosmic radiation; Solar radiation; Sound)
  acoustic, in sea, and sound-signal reception, 166
  in a.m. amplifiers, 368
  background, effect on frequency of valve oscillators, 1945
  carrier frequency, on power lines, 3703
  comparator, microwave, N.B.S., 208
  in conductors, differential law of thermal electrical fluctuations and influence of skin effect, 2951
  contact, in CdS single crystals, 3023
    in semiconductors, 2334, 3022
    temperature dependence of, 2952
    theory of, 79
  current, in Ba-Sr-oxide coating, 1522
    in metal contacts, 3498
    in semiconductors, 748, re-examination of Bernamont's data on, 747
  in damped oscillatory circuits, quantum effects in, 3243
  in diodes, power spectrum of, and valve conductance, 1196
  in electron streams, calculation of, 891
  eliminator, 'codan', for a.m. receivers, 2132
  flicker, due to interface layer in oxide cathodes, 1531
  flicker-effect constants, measurement of, 2725
  flicker and shot, space-charge reduction of, 281
  in Ge filament, 122
    effect of magnetic field on, [illegible]
  generator, for S and X bands, 788
  intermodulation, in multichannel telephony systems, 822
  low-frequency, in electrometer valves, measurements of, 1185
    in valves, 1192
  mathematical representation of, 893
  measurement, accuracy of, with square-law detector, 2724
    and assessment, 3406
    53 IRE 7S1 standard on, 3055
  in microwave superregenerative amplifier, 1948
  narrow-band, probability density of, 816
  in receivers and amplifiers, survey of, 815
  reduction, in intercommunication systems, 2787
  r.f., from h.v. power lines, and power-line design, 927
  in screen-grid valves, 1538
  shot, in gas discharges, 2185
    in Ge filaments, 2035
    in semiconductors, calculation of, 2040
  in sound recording and reproduction, 53 IRE 19 S1 standard on methods of measurement of, 1900
  in telecommunication cables, measurements of, 3182
  thermal, clipped, autocorrelation function and power-density spectrum of, 532
  transistor, circuit problems of, 643
    meter for, 2385
  in transistor amplifiers, 1288, 2279
  valve, 1864
    at frequencies > 10^8 c/s, 907, 3758
    low-frequency, measurements of, 1202
    due to oxide-cathode interface resistance, 1530
  at very low frequencies, in semiconductors, 2039
  v.h.f., total, measurements of at typical sites, 817
  v.h.f. receiver design in relation to, 1789
Nucleonics, industrial applications of, 495
    β-particle and γ-ray thickness gauges, 496

O

Optics, brightness flicker, investigation of, 1841
  direct-vision stereo-projection screen, 375
  wave and ray, in inhomogeneous absorbing media, 2954
Oscillations, a.m. and f.m., interfering, effective value of, 1475
    spectral differences between, 2484
  of biaxial anisotropic parallelepiped, 1315
  of conducting sphere surrounded by air and ionosphere layers, 3596, 3597
  electrical and acoustic, build-up phenomena of, 1626
  in electrical circuits, analysis in terms of modulation products, 2264
  forced, in cavity resonator and coaxial-line system, theory of, 1622
    with nonlinear restoring force, 1940
    in triode circuit, theory of, 971
  in *n*-mesh varying-parameter networks, stability of, 1271
  nonlinear, forced, exact solutions for special cases, 2622
    periodic, stability of, 2361
  in nonlinear electromechanical systems, theory of, 3556
  relaxation, coherent theory of, 694
  subharmonic, in nonlinear systems, 2953
  in whole-anode magnetron, 904
Oscillators, (See also Circuits; Signal generators)
  a.f., transistor, low-drain, 679, for 20, 200, 2000 and 20000 c/s, 3517
  amplitude-limited, synchronization-range determination of, 1943
  amplitude-stabilized, use of servo techniques in design of, 2937
  analysis of, admittance diagrams in, 1944
  arc and dynatron, solution of 'Rukop problem' for, 2602
  beat-frequency, high-stability, 0·25–10 Mc/s, 1628
  blocking, low-power, 2936
    operation and applications of, 2606
  constant-amplitude, using clamp valve, 970
  with constant output voltage, 2939
  crystal, fundamental-frequency and harmonic, analysis of, 358
  decade, precision, 1-c/s–100-kc/s, (D)2604
  feedback, travelling-wave-valve, 276
  filtered, calculation of attenuation in, 2449
Oscillators, filtered, nonlinear, pull-in of, 972
    perturbations of, 1279, 1624
  f.m., quartz-crystal stabilized, 1277
    using transistor and titanate capacitor, 2938
    wide-band, with double-phantastron circuit, for data transmission, 3559
  frequency stability of, methods of improvement of, 1513
  frequency-sweep, S-band, and test set, 3671
    use of variable inductance in, 683
    wide-band, 35–900-Mc/s, for testing television equipment, 486
    X-band, 973
    470–890-Mc/s, with crystal calibrator, 487
  grounded-grid, with disk-seal valves, self-excitation of, 3245
  harmonic, using iron-cored reactor, 2455
  h.f., quenched-spark, mains-loading calculation for, 361
    for regulation and control of aircraft v.h.f. equipment, 3240
  impulse-governed, high-stability, 2607
  klystron, coherence of microwaves generated by, 2943
    long-line effects on, 363
  LC, synchronization of, mechanism of, 2940
  linear, frequency stability of, effect of noise on, 362
  locked, frequency spectrum of, 2605
  low-frequency, 0·01-c/s–1-kc/s, with output of sinusoidal, square or triangular waveform, 680
  microwave, stable, for measurement of atmospheric refractive index, 1085
  multiple-feedback, wide-range, 969
  multivibrator, anode-coupled, triggering of by negative pulses, 3557
    transistor, pulse duration and repetition rate of, formulae for, 682
  nonlinear, with noise perturbation, power spectrum of, 968, 2334
    and Nyquist diagram, 1625, generalization of, 2232
    second-order, analysis using concept of moving poles, 2601
  pulse, hard-valve, 364
    locked oscillator, 2945
    mains-frequency, simple type of, 488
    phase-shifting, for thyratron control, 1629
    reciprocal-function, 2946
    'sine-squared', for testing television links, 1069
    for testing digital computers, 489
    wide range, 3672
  quartz-controlled, stability of, 1274
  RC, cathode-coupled and transitron, 2935
    with electronic tuning, 1638
  sawtooth-waveform, for recording time intervals, 152
  square-pulse, high-power, 1086
  square-wave, 2944
  test-pattern, for production testing of television receivers, 2748
  transistor, 45
    analysis of, 678
    frequency-substandard, 2064, 3051
  travelling-wave-valve, 1872, 3750
  ultrasonic, ionophone, 2539
    magnetostrictive, 1556
    whistle type, using gas and liquid jets, 1879
  valve, effect of background noise on frequency, 1945
  variable-frequency, synchronization by use of E80T valve, 2816
  v.h.f. and u.h.f., with single-crystal control, 975
  Wien-bridge, design curves for, 1278
  220 Mc/s, with TBW 6/6000 or TBL 6/6000 transmitting valve, 2270
  6-waveform, with display unit, for testing television channel, 1067

P

Particle accelerators, betatron, monitor and integrator for, 2754
    theory, development and applications of, 3381
  betatron and synchrotron, automatic ejection from, 3677
  cyclotron, electric fields in dees of, 1765
    at Stockholm, initial performance of, 506
    86-in., Oak Ridge, 181
  direct-voltage generators, focusing system for, 1099
    linear, ion optics of, 2089
    portable, 250-kV, 3679
    telemetry system for, 794
    1·5-MV, for heavy particles, at Stockholm, 508
  electron cyclotron (microtron), phase stability of, 2090
  linear, for electrons, with constant wave speed, axial motion of electrons in, 3077, using corrugated waveguide, 507, multicavity, 509, standing-wave, for 1·2 MeV, 3078, waveguide type, 2407
    for ions, motion of ions in, 2755, effect of accelerating-field variation on, 3079
    for protons, new focusing principle for, 1766
    radial focusing in, 1455
    waveguide, dielectric loading for, 2408
  synchrocyclotron, at Amsterdam, 3076
    perturbations in magnetic deflector for, 2091
    for 450-MeV protons, 1764
  synchrotron, electron, characteristics of beam in, 2752, energy loss in, 3380, theory of, 182, 35-MeV, 2093
    proton, at Birmingham, 2092, cosmotron, effect of magnetic defects in, 2753, focusing method for, 2406, strong-focusing, 1454, 3678, strong-focusing, elimination of effects of faulty alignment in, 2405
Particles, charged, motion in e.m. field of linear current and e.s. field of cylindrical capacitor, 75
Permeability, complex, and dielectric constant, measurement of at u.h.f., 2381
Permeability, determination of, optical method for, 995
  measurement, for large iron sheets, 3061
    for rod specimens, 1429
Perturbation theory, accuracy of calculations from inaccurate unperturbed wave function, 3254
Phase angle, and gain, measurement set for, (A)2738
  changing, for sinusoidal l.f. voltage, 330
  comparator, precision, for low radio frequencies, (A)483, 1080
  delay, in television transmission circuits, measurement of, 1750
  measurement, with c.r.o., 1739, accuracy of, 1740
    use of microwave homodyne in, 1741
  meter, 2741
  shifter, for range 10–100 Mc/s, 3357
    variable, potentiometer-type, low-cost, 640
    waveguide, for microwave measurements, 1440, modified magic-T, for microwaves, 331, wide-band, 2567
Phosphors, alkaline-earth orthophosphate, 3610
  CdS crystals, electrical conductivity of, 1026
    luminescence and conductivity on irradiation with α particles, 1371
  crystal, mechanism of phosphorescence in, 1643, 2624
  for flying-spot c.r. tubes, 3608
  intrinsic efficiencies under c.r. excitation, 3607
  light emission and light quenching under electron and ion impact, 734
  sulphate-base, thermoluminescence of, 3006
  for television c.r. tube screens, 1869
  transfer and transport of energy by resonance processes in, 372
  ZnF_2, luminescence decrease due to electron irradiation of, 3322
  ZnS, absorption and emission spectra of, 2023
    electronic transitions in luminescence of, 2679
    fluorescence centres and traps in, 2024
  ZnS-Cu, continuously excited, effect of electric field on, 2284
    influence of fineness of material on luminescence of, 2022
    with yellow and red emission, 3609
  Zn_2SiO_3-Mn and ZnS-Cu, field emission of, 3321
  Zn_2SiO_4, field-dependent luminescence of, 418
  Zn_2SiO_4-Mn, interaction of Mn ions in, 2323
  (Zn, Cd)S, induced conductivity of, 2021
  (Zn, Cd)S-Ag-Au-Al, with white fluorescence, for television tubes, 111
Photocells, Ag-Cs, fatigue effects in, 3137
  Ag-Cs_2O-Cs, pulse irradiation of, 3448
  application of, control of tracing head of oxy-acetylene cutter, 180
    register control, 1096
  barrier-layer, laws governing characteristics of, explanation of, 3141
  utilizing carrier injection in semiconductors, 888
  electron-multiplier, 1853
    cascade-type, remodulation in, 1519
    dark current of, 1518, 2492
    infrared-sensitive, 1520
    for scintillation counting, 266, 2181, 3748
  flying-spot scanner for study of surfaces of, 890
  Ge, comparison of three types of phototransistor, 2825
    p-n junction, Type M-1740, properties of, 889
  PbS, properties of, 2677
  PbSe, in infrared spectroscopy, 3142
  Sb-Cs, alternating component of photocurrent under strong illumination, 3138
  Se, barrier-layer, barrier-height in, 1852
  Se and Ag_2S, current sensitivity of, effect of electron stream on, 3140
  Se-CdO, mechanism and applications of, 3449
Photoconductivity, of anodic Ta_2O_5, 733
  'barrier layer' and 'concentration' theories for, choice between, 3605
  of CdS crystals at relatively high temperatures, 1687
  of CdS single crystals at edge of absorption band, 1691
    growth and decay of, 1688
  of Cs_3Sb, and thermo e.m.f., 3002
  infrared, of Si at low temperatures, 2014
  of orpiment, 415
  of PbS, absorption spectra of at various temperatures, 2020
    and conductivity of, effect of oxygen on, 3040
  of PbS layers, properties of, 2706
  of ZnS, measurements on single crystals, 732
Photoelectric effect, internal, electron-optical investigation of, 3606
  in natural PbS, (C)2013
——**emission**, (See also Cathodes)
  of BaO, 2322
  of CdS and CdSe, field-type, 1391
  of CdS-Cu, at infrared λ, 2012
  of Cs_3Sb, and energy structure of, 3004
    measurements of energy distribution of, 1690
  of Cs_2Te and Rb_2Te, 1689
——**materials**, Cs_3Sb, electrolytic conduction in, 2676
  PbS, noise measurements on thin layers, 3003
  PbS, PbSe and PbTe, optical constants of in 0·5–3-μ wavelength range, 2018
  PbTe and Si, optical constants of, interrelation between, 2017
Photography, image converters as high-speed shutters in, 2751
Photomagnetoelectric effect, in semiconductors, measurements on Ge, 2016
    theory of, 2015
Pickups, and loudspeakers, objective testing of, 19
  piezoelectric, crystal, 1904
Piezoelectric crystals, (See also Quartz)
  ADP, deuterated, properties of, 1044, theoretical interpretation of properties of, 1045
  $BaTiO_3$ ceramics, properties of, 1042
  for pressure, temperature and humidity measurements, 2403
  quartz and synthetic-crystal resonators, 1376
Piezoelectric crystals, for radio applications, properties of, 3635
  Rochelle salt, under compressive stress, voltage measurements on, 735
    measurement of dielectric constant at 3 kMc/s, 2729
  sound-wave propagation in, theory of, 3014
  thickness vibrations of, 357, 3553
Piezoelectricity, ferroelectricity, and crystal structure, 699
Plasma, in crossed electric and magnetic fields, 3591
  electron, longitudinal waves in, 1310
  gas-discharge, absorption of microwaves by, 2970
  in magnetic field, theory of, 1964
  moving, origin of magnetic fields in, 1985
  with neutral gas, dynamics of, 1309
  oscillation, relation between various types of, 1965
    and solar 'enhanced radiation', 1322
  propagation of e.m. waves in, 1659
  with variable current, theory of, 386
Potential, barrier, between electrodes with different applied potentials, 2628
    theory of, 2629
  contact. See Contact potential.
  in electrically shielded space, variations of, 1646
  isolating comparator for, 3064

due to uniformly charged disk, calculation of, 1651
vector, derivation from scalar potential, (A)2285, 3574
Power measurement, at h.f., using thermistors, 1441
microwave, absolute, radiation-pressure method for, (D)1071
at u.h.f., mismatch errors in, 3661
meter, for microwaves, 786
supplies, a.c., constant-voltage, (D)168
bridge circuit for feeding several loads, 1491
constant-voltage, for transistor circuits, 2797
d.c., stabilized, using glow-discharge regulator tubes, 231
h.v., corona-stabilized, for proportional counters, 1803, low-current, using transistor oscillator, 833
small, effective current and efficiency of, 2799
stabilized, 552, for electrometer valves, 1133
stabilized rectifier unit for 5 kV, 50 mA, 2800
for transmitters, 2454
vibrators and vibrator power packs, recent developments in, 228
50–300-V, 2152
0·5–3-kV, using r.f. oscillator, 1134
25-kV, using r.f. oscillators, 553
600-VA, thyratron inverter circuit for, 1490
Public address systems, portable equipment for, 1899
for power stations, 615, 3470
Pulses, amplitude spectrum of, and pulse technology, 3105
coding and decoding by passive networks, 2441
sine-squared, for television testing, 3377

Q

***Q* factor,** measurement of, 775
chart for use in, 464
frequency-sweep method for cavity resonators, 465
meter, correction abac for errors due to valve-voltmeter loading, 783
Quadripoles. See Networks, quadripole.
Quantum theory, of fields, mathematical aspects of, 1289, 1290, 2620
relation to theories of gravitation and electromagnetism, 3570
soluble problem in energy bands, 391
Quartz, crystals, h.f., for filter networks, 3552
internal friction of, 2349
operational characteristics of, 140
resonators, design and applications of, 441, harmonic oscillations of, 1619, impedance meters for, 2390, measurement of parameters of, 3670, mechanical loading for adjusting frequency of, 966, in parallel-resonance circuits, activity measurement for, 1273, tuning-fork type, for 1–20 kc/s, 2267, variation of resonance frequency with pressure up to 5000 atm, 442, 100-kc/s, high-stability, 1063
fused, for ultrasonic delay lines, 3637
variation of conductivity of, 1378

R

Radar, (See also Aerials; Lenses; Navigation aids)
applications, measurement of velocity of projectiles, 174
back-scatter from cylindrical wires, 96
and detection of icebergs, etc., 2673
displays, c.r. tube, quality factor for, 2317
p.p.i., moving-target indication systems, 2672, television unit for, 2001
remote, Decca link equipment for, 2005
special type of p.m. transmission system for, 'Durchmusterung', [illegible]
echoes, and lightning, 107
from precipitation, the 'melting band', cross-polarization of, 1364, 'melting-band' phenomena in, 2314
from rain, 2994, from non-freezing clouds, 2004, at Sydney, New South Wales, 3312
echoing-area measurements on models, use of dielectric lenses in, 1366
equipment, for moving-target indication, measurements on, 1446, at Orly, 3316
marine, 3-cm/10-cm equipment for merchant ships, 730
omnidirectional reflector system for, 1684
optimum pulse-integration angle and system sensitivity of, 2671
panoramic, cinematographic recording equipment for, 2007
port equipment, Decca, demonstrations at Hamburg and Bremen, 1360
Radar, port equipment, installations at Boston, Long Beach, New York and Liverpool, 1685
pulsed, magnetic modulators for, 2992
search, for civil aircraft, 109
training apparatus for air-traffic control, 1368, 3319
Radiation, (See also Aerials)
detectors, phosphor-photocell, Type AN/PDR-18, 1103
Radio astronomy, See Astronomy, radio.
communication, international organization of, and world problem of frequency allocation, 2785
engineering, sources of information on, 2192
progress, I.R.E. review for 1952, 2527
station, at Lüchow, West Germany, organization and installations of, 2444
technology, applications of theory of numbers in, 3346
Radio links, (See also Communication systems; Radiotelephony; Relay systems; Television)
cm-λ, Manchester/Edinburgh, travelling-wave valves in, 2829
directional, in Western Germany, and equipment for, 2140
f.m., microwave, multichannel, design of, 217, multichannel, wide-band circuit technique for, 220
for telephony, experimental equipment for 420–470-Mc/s and 860–960-Mc/s, 3412
km-λ, intelligibility in, and mean level of atmospherics, 105
microwave, measurement techniques and components for, 219
4-kMc/s, path attenuation measurement for, 1091
multichannel, u.h.f., between Mestre and Trieste, 3109
s.w., s.s.b. multichannel operation of, 2144, 2175, 2425
in U.S.A., survey of, 545
u.s.w., graphs for design calculations, 2118
Radiosonde, automatic radar system operated by British Meteorological Office, 3675
improved, 497
without responder, pulse observations of wind by, 2993
Radiotelegraphy, (See also Communication systems)
percentage of error signals received, recorder for, 3696
smallest permissible frequency separation between transmissions, 540
Radiotelephony, (See also Communication systems; Radio links; Relay systems)
beam link, f.m., u.s.w., multipath distortion in, 218
beam-system, p.ph.m., channel separation in, 1788, 12- and 24-channel, 822
Israel intercity, f.m., 250-Mc/s, 2442
mobile, transmission problems of, [illegible] 3417
multichannel equipment for Eindhoven–Tilburg link, 546
new terminals of Centro Radio Nazionale P.T., 2793
Rhine ship service, propagation tests for, 542
s.s.b., 4–23-Mc/s, 4-channel equipment for, 541
for trains, German investigations on, 225
Reactors, saturable, with inductive d.c. load, steady-state operation of, 3527
as reference source for magnetic amplifiers, 2237
Receivers, (See also Radar, Television)
all-wave, 100-kc/s–30-Mc/s, Type-E 103AW/4, 207
a.m., noise eliminator for, 2132
broadcasting, a.m./f.m., for comparing transmissions in the range 87·5–95-Mc/s, 2121, new trends in design of, 2427, using new valves, 204
u.s.w., development of circuit and valves for, 2428
VVB-RFT, at the Leipzig Fair, 810
communication, band-spreading, method for, 812
easily demountable, 526
s.w. superheterodyne, design of, 3697
definitions of terms, 52 IRE 17S1, standard on, 811
d.f., matched-channel, phase and gain stabilization in, 2320
long-wave, stable, for space-wave measurements, 2123
miniature, for Palais de Chaillot N.A.T.O. translation service, 2794
monitoring, with automatic frequency-sweep device, 2122
for r.f. noise measurements, 3402
space-diversity, a.f. combining system for, 2426
subcarrier, 1-Mc/s, for f.m. multiplex system, 3099
superheterodyne, cm-wave, noise factor of, 1790
with crystal mixer, sensitivity and noise factor of, 2127
dust-core-tuned, design of, 528
impulse response of, operational analysis of, 1115
microphony in oscillators in, 814
radar, second-detector signal/noise improvement in, 527
tracking methods for, 2126
using transistors, (A)3403
s.w., independent-sideband, 2425
signal/noise ratio of, dependence on input voltage of, 2125
and transmitters, for citizens' radio, 2437
v.h.f., noise performance of, 1789
Reception, (See also Field strength; Television; Wave propagation, e.m.)
decametre-wave, Paris/New York, deterioration of since Aug. 1950, [illegible]
of frequency-shift signals from s.w. transmitters, 3399
of pulsed carrier waves in noise, statistical criteria for, 2782, 2783
of signals in noise, nonlinear filters for, 206
optimum filters for, 205
of sine wave in Gaussian noise, 2429
of 1–10-c/s signals in noise, commutator device for improvement of, 2784
Recorders, (See also Sound recorders)
frequency, electronic, automatically calibrated, 10–130-c/s, 2377
ionosphere, automatic, for range 0·6–25 Mc/s, 3356
panoramic, 16-kW, 1–20-Mc/s, 3052
Recorders, ionosphere, 50-kc/s–1-Mc/s, 1998
1–20-Mc/s, 1-kW, Netherlands P.T.T., 2989
keep-alive arrangement using 10-c/s multivibrator, 473
Numerograph, for digital computer, 1726
pulse, with timing trace, 2379
tone-pitch, for phonetics research, 1226
Recording, (See also Sound recording)
field-strength, 'fixed-level' method of, 2065
Rectification, (See also Semiconductors)
thermal, in semiconductors, 3015
Rectifiers, (See also Valves, crystal)
barrier-layer, barrier height in, 1852
theory of, 2038
crystal, CdS, properties of, 3136
Cu_2O, zero-bias resistance of, temperature dependence of, 3345
Cu_2O, CuS and Se, developments in, 2154
electrolytic, Al-Al_2O_3, impedance of, 2801
Ge, 2698
contact-p.d. of, changes of during forming, 3260
diffusion theory of, effect of high-field mobility in, 2697
forming of, investigations of, 2032
p-n-junction, medium-power, 835, power-unit, 834, temperature dependence of backward current in, 423
point-contact, reverse characteristics of, 1715
and transistor, theory of, 2821
harmonic-insensitive, for a.c. measurements, 3662
Hg-arc, Nevitron, 836
Mg-CuS, hermetically sealed, 2153
output-voltage control by transductors, 839
point-contact, effect of minority carriers on breakdown of, 437
power-läw, output signal/noise ratio of, 3405
Se, blocking mechanism of, 2699
capacitance of, 1802
electron mutiplication in reverse operation of, 2350
temperature variation of characteristics of, 1389
40-V, development of, 2457
Si, point-contact, effect of heat treatment on, 1714
solid, dynamical theory of, 3630, 3631
TiO_2-film, 229
valve, high-power, h.v., 2155
Reflection, (See also Sound; Wave propagation, e.m.; Waves)
coefficient, of stratified medium, use of calculus of variations for determination of, 1314
of transmission systems, determination of, ratio meter for, 466
of e.m. waves, from regions of refractive-index gradient in atmosphere, 1780
from rough sea surface, 1106
of microwaves, from ground and water surfaces, 1787
by metal-plate structures, 389
of sound or e.m. waves from point source at plane boundary, 2540
Reflectometer, directional-coupler, for measurements in s.w. range, 477
waveguide, wide-band, recording, 488
Refractive index, of air/water-vapour mixtures at dm λ, 1642
r.f., of atmosphere, constants in formula for, 1990, 3287, measurement of variations of, 1085, rapid variations in, 481, slide-rule computation of, 1014
vertical and horizontal distribution of gradient of in troposphere over U.S.A., 1991
of water vapour, air, O_2, N_2, H_2, D_2 and He at 9·2 kMc/s, 2062
Regulators, alternating-voltage, electromechanical, 3726
current and voltage, using reference standard, 3725
direct-voltage, electronic, 1804
for kilovolt range, 838
variable, using cold-cathode triode, 554, (D)1805
speed, electronic, theory of, 1451
voltage, using nonlinear elements, 230
Relay systems, (See also Communication systems; Radio links; Radiotelephony; Television)
microwave, in Europe, North Africa, Near East and Australia, 3108
multichannel, Australian, 3110
TD-2, station equipment for, 216
u.h.f., planning of, 1126
Research, radio, in British Commonwealth, 2528
on radio and electronics, in Russia, 2525
on tropospheric e.m. wave propagation, at N.B.S., 2768
Resistance, a.c., realization of, 3493
h.f., apparent, of conducting strip parallel to conducting plane, 80
Resistivity, of Bi, variation in magnetic field of, and Corbino effect, 1710
of cold-worked metals and alloys, effect of temperature of deformation on, 1027
of metals, at high current density, with pulsed operation, 1377
in magnetic field, theory of, 378
of refractory oxides at 600–1500°C, 2684
variation in magnetic field, mechanism of, 377
Resistors, borocarbon, characteristics of, 340
carbon-film, temperature coefficient of, 1921
for 200-°C, production of, 947
coated-glass, E-C, 1253
fixed, developments in, review of, 946
nonlinear, shaping of characteristics of, 341
printed, production control of, 47
Russian notation for value of, 2927
standard, a.c., 3360
Au-Cr, 772
thin-film, disk-type, for r.f. micropotentiometer, 3525
10^9–$10^{11}\Omega$, measurement of, 3056
$>10^{11}\Omega$, methods of measurement of, 459
Resonance curves, simple explanation of, 675
Resonators, (See also Piezoelectric crystals, Quartz)
acoustic, Helmholtz, in B.B.C. studio at Swansea, 309
spherical, effect of viscous dissipation on, 1564, (C)3172
tubular and hollow brick types, absorption by, 310
cavity, coupled, resonance frequencies for, 1621
containing crystals, e.m. oscillations in, 1315, 1623
operating in degenerate modes, perturbation effects in, 360
double-loop-coupled, analysis for, 967
with finite wall conductivity, natural e.m. oscillations in, 67
influence of surface finish and atmospheric conditions on, 2932
lossless, with hole excitation, e.m. field in, 2268
microwave, interaction of modes in, 2933
Q measurement for, frequency-sweep method of, 465
dielectric-cylinder, high-permittivity, quasi-degenerate modes in, 1942
magnetostrictive, ferrite, and applications, 2229
vibrating-wire, high-*Q*, 3561
Response, of linear time-dependent systems to white noise, 2856

S

Sampling, sequential, for attributes, theory of, 2715
Scattering, (See also Sound; Wave propagation, e.m.; Waves)
of e.m. or sound waves, by grating, 695
by irregular surface, 2968, 2969
Screening, of electrical equipment, design of mesh networks for, 2796
of test rooms and instruments, 3116
Sealing, by optical polishing, 141
Seals, enamel, for mica windows in G-M tubes, 3638
glass/kovar, hermetic, 2711
glass/metal, fundamentals of, 2712
high-conductivity, 142
hermetic, 2356
Semiconductors, adiabatic Hall effect in, 3018
alternative theories of, 78
anthracene single crystals, electronic conductivity of, 3016
BaO, diffusion of Ba in, 432
BaO single crystals, Hall effect in, 129
boron, electrical and optical properties of, 1696, 2031
CdS, rectifier properties of, 745
CdS single crystals, contact noise in, 3023
ceramic, 'Caslode', for microwave power absorption, 2029
conduction in, influence of state of division on type of, 2686
contact noise in, 2334, 3022
contact phenomena in, theory of, 2687
copper sulphides, electrical and optical properties of, 1028
Cu_2O, high temperature conductivity measurements on, 1386
low-temperature conductivity of, dependence on oxygen pressure during annealing, 1385, 1387
optical absorption in, effect of lattice defects on, 1384
production methods for stability of, 1383
properties of, 1701
thermoelectric measurements on at high temperatures, 3613
current carriers in, added, transport of, 3611
determination of effective mass of, 1381
current noise in, 748
re-examination of Bernamont's data on, 747
cyclotron resonances, magnetoresistance and Brillouin zones in, 3017
diffusion constant and electron and hole mobility in, verification of relation between, 1305
drift mobility in, measurement of, 1379
effect of electron surface state on optical properties of, 1304
electron spin in, 1960
energy states of impurity carriers in, 1382
ferrites, magnetodynamics of, 1029
GaAs and InAs, preparation and properties of, 3325
Ge, acceptors produced by quenching of, 1407
contact resistance of, 1030
Cu as acceptor element in, 119
effect of magnetic field on noise in, 2695
effective mass and relaxation time of conduction electrons in, 2330
elasticity and thermal expansion of, 2348
electron mobility in, 425
energy-band structure of, 1699
filaments, shot noise in, 2035
grain-boundary barriers in, 1406
Hall effect in, three applications of, 1930
heat-treated, infrared absorption of, 2678
high-field mobility in, with dominant impurity scattering, 3328
large-area contacts on, properties of, 118
lattice defects, heat-treatment-induced, 1697, activation energy of, 742
lifetime of carriers in, 740, 741
microwave measurements on, 3618
n-type, low-temperature Hall curve for, 426, single-crystal, effect of heat treatment on, 2333
noise in, 122
observations of dislocations in boundaries, 2693
p-type, contact properties of, 117, infrared absorption bands of, 424
photomagnetoelectric effect in measurements of, 2016
plastic deformability at relatively high temperatures, 2033
p-n junction, electronic states under strong applied fields, 736, fused-impurity, impurity diffusion and space-charge layers in, 3020, pressure-welded, 2034, production by diffusion, 739
production, properties and applications of, 1405
radiative transitions in, 2331
Semiconductors, Ge, recombination rate in, determination of, 2692
relation between charge-carrier and pulse drift mobilities in, 3617
solute distribution in, 3343
space-charge-limited hole current for high applied voltages, 3329
surface forming of, 3330
surface properties of, 1698
temperature dependence of drift mobility in Ge, 2332
thermal conversion of, impurity effects in, 116
thin films, Hall constant and resistivity of, 3615
ultrasonic-attenuation measurements in, 2694
uses in telecommunications technique, 1850
Ge single crystals, apparatus for production of, 2707, optical constants of, 3344, preparation of, 744, (C)1408
Ge and Si, diffusion of Li into, 3616
electron traps in, 2691
field dependence of mobility in, 3326
physical properties of, 738
plastic deformation of, 1403, 1404
solubility in Ga and In, 3033
Ge, Si and Hf, isotopic constitution of, 3341
haematite, crystal structure and antiferromagnetism in, 1311
thermomagnetic properties of, 2705
intermetallic compounds, CdSb, properties of, 3619
InSb, magnetoresistance effect in, 2696
InSb, GaSb and AlSb, 2688
K-Sb, Cs-Sb K-In and Cs-In systems, properties of, 2030
iron-oxide agglomerates, conduction mechanism in, 114
iron-oxide-mixtures, lattice defects and Debye r.f. absorption in, [illegible]
magnetoresistance of, theory of, 2329
metal contact with, theory of, 379
micromanipulator for location of point contacts on, 2999
mixed *n*- and *p*-type, theory of, 2028
molybdenite, electrical properties of, 2708
oxides, variations of lattice parameters of, 115
PbS, band structure, investigation by cellular method, 2037
sintered, conductivity and Hall coefficient of, 120
transistor action and related phenomena in, 2036
PbS, PbSe and PbTe, intrinsic conduction in, 1388
PbTe, investigation of transistor action in, 1409
photomagnetoelectric effect in, theory of, 2015
p-n junctions, production of, by variation of crystal-growth rate, 743
revealed by electrolytic etching, 3332
theory of noise in, 871
porous, conductivity of, 737
properties and applications of, 427, 1703
recombination of holes and electrons in, statistics of, 420
rectifying pairs, relaxation processes in, 3620
resistance/temperature characteristics of, measurement of, 3614
Sb_2S_3 and Bi_2S_3, electrical properties of, 3019
Se, amorphous and hexagonal, optical absorption and reflection of, 2019
multicrystal, electrical properties of, 2690
shot noise in, calculation of, 2040
Si, effective mass of conduction electrons, 421
energy-band structure in, 3327
n-type, powdered, electron-spin resonance absorption in, 3342
p-type, thermoelectric constant of, 82, 2335
resistivity and thermionic emission of, 3333
single crystal rods, 422
space-charge-limited emission in, 3324
'swept intrinsic', field distribution in, 2689
Te-film, effect of electric field on conductance of, 1695

Te single crystals, infrared transmission of, **417**
technical vocabulary for, French, **1702**
thermal rectification effect in, **3015**
thermo- and galvano-magnetic coefficients for, **1380**
various, transistor properties of, **121**
ZnO, photodielectric effect, ferroelectricity and thermoluminescence of under ultraviolet excitation, **3005**
sputtered layers, effect of dissolved oxygen on electrical conductivity of, **1031**
study of lattice defects by r.f. spectroscopy, **1700**
Servomechanisms, (See also Control systems)
a.c., compensation networks for, graphical synthesis of, **2448**
effects of carrier shifts on derivative networks for, **2452**
airborne, discriminators for, **3422**
application of nonlinear techniques in, **3111**
carrier-frequency, synthesis of compensation networks for, **3115**
closed-loop, reduction of forced dynamic error in, **3423**
comparators for, **3113**
using compensated magnetic amplifier, **3114**
conditionally stable feedback systems for, design of, **2453**
design of, analogue computer for, **1055**
using filtered oscillators, stability of, **2449**
for heterodyne-oscillator drive, **2378**
instrument, damper-stabilized, design of, **549**
linear, solution by means of equivalent network, **550**
multiple, stability of, **227**
nonlinear, **831**
with filters, transients in, **1130**
transient response of, **3112**
with nonlinear friction, operating modes of, **3421**
remote-position-control, hydraulic, and analogue computer for, **1054**
sampling, application of pulse transfer function to, **1131**
second-order, **3420**
saturating, phase-plane analysis of, **2447**
Servomechanisms, survey of, **830**
synthesis of by root locations, **(A)2150**
theory of, formula for integral occurring in, **832**
transient performance calculation from db/log f plots, **3721**
use of rotary amplifiers in, **2451**
variable-carrier-frequency, stabilization of, **551**
with variable elements, stability of, **3723**
theory of, **1800**
Signal generators, (See also Generators; Oscillators; Test equipment)
covering range 20–1200 Mc/s, **1084**
spurious f.m. in, **3562**
giving stepped signal corresponding to graded greys, for television testing, **565**
two-range, **485**
Signal/noise ratio, l.f., decrease of when increasing i.f. bandwidth, using square-law or linear detector, **3404**
for various modulation systems, **828**
Signals, analytical, with limited spectra, **2137**
and synchronization of amplitude-limited oscillators, **1943**
and linear transmission operators, analysis of, **3703**
pulse, with thermal noise, optimum clipping for, **2781**
Skin effect, anomalous, in metals, at low temperatures, **1303**
in conducting materials, chart for, **435**
Slide rule, vector, **2714**
Solar activity, correlation with atmospheric pressure fluctuations, **1323**
correlation with geomagnetic activity, **1011**
correlation with geophysical phenomena, **1983**
——**corona,** and geomagnetism, **1326**
observations at eclipse, 25th Feb. 1952, **716**
——**flares,** and magnetic storms, **3276**
——**radiation,** effects of, in upper atmosphere, **1321**
r.f., from corona, at 10 cm–10 m λ, **3277**
dm-λ, asymmetry of, **3273**
'enhanced', and plasma-oscillation theory, **1322**
inadequacy of thermal theories of, **1980**
m-λ, origin and characteristics of, **2971**
outbursts at 8·5-mm λ, **93**
during solar eclipse, 28th April 1949, **3402**
during solar eclipses, 1st Sept. 1951 and 25th Feb. 1952, **94**
from sunspots, directivity of, analysis of, **1981**
Soldering, by dip method, for radio and television receivers, **2710**
Sound (See also Absorption; Acoustics; Diffraction; Reflection; Wave propagation; Waves)
absorbers, membrane-type, and application in broadcasting studios, [illegible]
attenuation by ceilings, measurement with sinusoidal excitation, **2871**
effects, for radio plays, electroacoustic production of, **3177**
field, near circular transducer, **913**
of disk, effect of finite circular baffle on, **1555**
of infinitely long vibrating cylinder, **1554**
of plane waves, and steady streaming, **1551**
of rectangular piston membrane, **1877**.
second-order, energy/intensity relations in, **2194**
and steady rotational flow, **1552, (C)3166**
between two infinite walls, due to piston source, **1876**
insulation, by means of rubber and steel springs, **608**
measurement of, storage methods of, **3464**
musical, relations between electrical and mechanical production of, **3461**
particle-velocity measurements in liquids with Rayleigh disk, **305**
pressure, multiple-Rayleigh-disk arrangement for measurement of, [illegible]
propagation, effect of meteorological conditions on, review of, **2533**
in gas, **1875**
in granular media, **923**
in labyrinth, application of variational principle in theory of, **2857**
in liquid-filled cylinder with surrounding elastic fluid, **2858**
in rectangular tube, attenuation of, **2537**
in stratified region of troposphere, theory of echoes in, **1880**
in tubes with obstacles or discontinuities, **2193**
radiation pressure, physics of, **1878**
of plane waves at oblique incidence, **6**
radiators, absorption surface of, **1220**
directivity and amplitude distribution of, **1221**
reception, directional, review of methods of, **1574**
underwater, thermal-noise limit of, **106**
reflection, from ocean layers with temperature change, **3463**
of spherical pulse by absorbent infinite plane, **914**
from surfaces with periodic structure, **1895**
rotation of plane of polarization by acoustic gyrator, **1874, 2532**
scattering from sea surface, **2541**
signal-distribution arrangements at South Bank site, London, **23**
source-intensity, in liquids, dependence on absorption coefficient, **2543**
measurement of, **2536**
theory of single-channel transmission, **1229, 1890, 2869**
transmission through partitions, investigation using small-scale models, **609**
velocity, in air, measurement of, at 1 kc/s, **1566**, at 13·5 kc/s, **605**
errors in indirect measurements of, **916**
in liquids, temperature dependence of, measurement of, **1224**
measurement of, properties of water-filled tubes for, **2866**
——**recorders,** magnetic, **2551**
interference effects in recording heads of, **2876**
print-through effect in, **1901**
tape field with ideal and with wide-gap pickup head, **1575**
——**recording,** disk, binaural, two-band system, **2550**
calibration by light-pattern measurements, **2875**
Sound recording, film, using electro-optic crystal, **2209**
magnetic, in cinema-film production, **21**
effect of head and tape constants in, **2555**
on magnastripe film, **2205**, film production for, **2204, 2206, 2207, 2208**, wear of magnetic heads in, **2203**
standardization of technique of, **22**
stereophonic, **1902**
studies on, **3471**
tapes for, high-output, performance of, **1576**, improved, **2553**, measurement of surface induction of, **2552**, mechanical properties of and quality of recording, **20**, noise tests on, **2877**
very-long-period, continuous, apparatus for, **3180**
and reproduction, 53 IRE 19S1 standard on methods of noise measurement in, **1900**
——**reproducers,** disk, pickups for, lateral mechanical impedance of, **3181**
——**reproduction,** disk, measurement of distortion in, **2736**
needle wear in, **(A)316**
electronic automatic volume compression in, **965**
high-quality, circuit and auditorium requirements for, **611**
magnetic, analysis of, **2554**
stereophonic, **1902**
Spectrometer, high-speed, infrared, **1758**
radio. See Analysers, frequency-spectrum.
Spectroscopy, microwave, coaxial cell for, **1317**
applied to determination of nuclear moments, **1008**
at 1–2-mm λ, **2623**
Speech intelligibility, effect of frequency and amplitude distortion on, **10**
perception of, analysis of processes in, **920**
sounds, three-dimensional models for, **11**
typo-sonograph for, **1568**
synthetic, investigation of consonant sounds, **919**
Stability, of control systems, **1489**
criterion, general, for networks, **2231**
frequency, of linear oscillator, effect of noise on, **362**
Stabilization, frequency, in microwave range, **46**
of nonlinear feedback control systems, **1761**
of variable-carrier-frequency servomechanisms, **551**
voltage, corona discharge tubes for, **1136, (D)2803**
improved, with voltage-regulator tube, **837**
review of, **2458**
with series valve control, **2802**
Stabilizers. See Regulators.
Standard frequency transmissions, (See also Frequency standard)
Rugby, **1732**
24-hour service, **1423**
and time signals, WWV, automatic announcing system for, **1731**
world-wide reception of WWV and WWVH, **522**
Standardization, of symbols and circuit diagrams, **3492**
of telecommunications equipment in France, **2526**
Standards, (See also Television)
resistance, absolute determination of ohm, **1426**
and units, electrical-measurement, review of, **1059**
52 IRE 17S1, definitions of terms on receivers, **811**
53 IRE 7S1, on noise measurement, **3055**
53 IRE 11S1, definitions of modulation terms, **2438**
53 IRE 19S1, on noise measurement in sound recording and reproduction, **1900**
53 IRE 22S1, definition of colour terms for television, **1817**
Sun, density and velocity of material in, estimate of, **1982**
distribution of radio brightness at 9·35 kMc/s on, **3272**
research at Kodaikanal observatory on, **392**
Sunspot cycle, 22-year period of, **2304**
Sunspots, effect on geomagnetic activity, **2642**
flares and filaments, observed at Stockholm in 1950 and 1951, **715**
and geomagnetic storms, **2641**
interrelation of numbers and ionosphere critical frequencies for different sunspot cycles, **1350**
magnetic field of, **2303**
periodicity of number variations, **3595**
physical conditions in, deduction of, from spectral data, **1324, 1669**
provisional numbers, April–June 1952, **395**, July–Sept. 1952, **1325**, Oct.–Dec. 1952, **1984**, Jan.–March 1953, **3275**
relative numbers, final, for 1951, **394**
Switches, electronic, using cold-cathode gas-discharge tubes, **288**
in communication engineering, **48**
using multivibrator, **654**
triode, **343**
multichannel, for microwave circuits, **1252**
t.r. and a.t.r., C.F.T.H., for 3-cm radar equipment, **588**
waveguide, rotary, **2241**
Synchronization, (See also Television)
a.f.c., theory of, **3214, (C)3524**
for c.r.o. display of variable voltages, **339**
of LC oscillators, **2940**
of pulsed high-energy ion beams, **1448**

T

Telecommunications, in civil aviation, **3419**
equipment, standardization of, in France, **2526**
in Nyasaland, **1119**
Telecontrol, of broadcasting transmitters, **2762, 2763**
of clocks, by pulses at 1-sec intervals, **1421**
Telegraphy, frequency-shift, on carrier-current telephone lines, **2434**
teleprinter, distortion in, c.r.o. measurement of, **3408**
technical progress in, **2138**
Telemetry, high-speed system of, **3674**
multiplex teletype system of, **1097**
pulsed light-beam system for e.s. accelerator, **794**
review of methods of, **1762**
wire system for transmitter circuits, **2762, 2763**
10-channel pulse-code system of, **498**
23-channel p.p.m. system for rockets, **726, 2404**
Telephone earpieces, suitability for measurements on f.m. tones, **312**
Telephony, (See also Carrier-current systems)
circuits, cable, uniform, determination of primary parameters of, **2556**
multichannel systems, intermodulation noise in, **827**
short-range, ultrasonic system of, **1885**
Television, (See also Aerials; Interference)
adaptation of eye in relation to optics of, **563**
amplifiers, h.f. and i.f., effects of feedback in, **1954**, gain and bandwidth of, **1639**, noise problems of, **1640**
i.f., with bifilar-wound coils, **3735**
with optimum transient response, **3133**
for pickup tube, fluctuation noise in, **1837**
wide-band, factors in design of, **1838**
applications of, industrial and professional, **1844**
in industry, research and education, **1512, 2815**
to operative-surgery demonstration, **1845**
bandwidth reduction in, **1825**
signal compression by recoding, **1154**
techniques for, **1824, 3731**
cameras, auxiliary equipment for, **1165**

equipment testing with variable-phase synchronizing pulses, **3378**
illumination of, **1164**
lighting equipment for, **864**
at 1951 Radio Exhibition, London, **564**
synchronization technique in, **1153, (C)2161**
systems, noise measurements on, **868**
square-wave testing of, **1754**
transient testing of, **1065**, using sine-squared pulses, **3377**
test equipment, **1823, 2396**
for comparison of line standards, **1753**
grey-scale generator for, **565**
wide-band frequency sweep generator for tests on, **486**
6-waveform generator and display unit for, **1087**

- test-pattern transmission, monoscope for, 850
- transmitters, in Great Britain, selection and testing of sites for, 1172
  - high- and low-level modulation for, comparison of, 567, 568, (D)1163
  - high-power, Holme Moss, design of, 1161
  - mobile, B.B.C., 3127, hinged mast for, 1160
  - Wenvoe, Glamorgan, 3126
  - wide-band amplifiers for, 3744
  - 850-Mc/s, experimental, KC2XCY, 566
  - 10-kW, Nikolassee, Berlin, 245
  - 100-kW, output stage for, 3742
- u.h.f., experimental broadcast to schools, 555
  - monitoring equipment for, 247
- vestigial-sideband system, response to 'sine-squared' step voltage, 1066
- video signal, application of autocorrelation theory to, 3122
  - power density spectrum analysis by autocorrelation, 3121
  - waveform, display apparatus for, 2745
- wire-distribution systems, 1808
  - specification and testing of, 1755

Test equipment, (See also individual instruments; Television)
- cable-fault indicator, 2392
- cable-fault locator, pulse-operated, portable, 3361
- for c.r.o. display of transistor characteristics, 3053
- for f.m. systems, 3664
- for group-delay distortion of transmission system, 1076
- for harmonic response of linear systems, 3374
- insulation tester, electronic, 500-V–10-kV, d.c., 480
- microwave, for magnetron production, 778
- radar, Type-TF890A, 1445
- reference-level, direct-reading, for telephone circuits, 777
- S-band, with frequency-sweep generator, 3671
- for the TD-2 microwave radio relay system, 3063

Thermistors, characteristics and applications of, 948, 3215
- h.f. power measurement with, 1441
- manufacture of, 2240
- resistance of, effect of pressure on, 342

Thermocouples, for radiation measurements, using semiconducting materials, 3376

Thermometers, sensitive radio receivers as, 2761

Thunderstorms, radio location of, recent developments in, 1020

Time constant, concept of, extension of, 2575
- interval recorder, using sawtooth-waveform generator, 152
- signals, schedule of transmissions from Observatoire National, Paris, 2744

Timebases, circular, slow-speed, 673
- line, single-valve, 2814
- negative-feedback, instability in, 2272
- pulse-operated, 1630
- review of, 1631
- sawtooth derivator for c.r.o., 2269

Timers, electronic, 1420
  - spark-type, 455
- ignition-type, for spot-welding machines, 501
- photographic-exposure, with compensation for supply-voltage variations, 789
- reading in seconds or in cycles, 770

Torque measurement, electrical microdynamometer for, 490

Transducers, $BaTiO_3$, circular, bimorph, sensitivity of, 926
  - h.f., with wide-angle beam, design of, 3167
- crystal, graphical aids in interpreting performance of, 2164
- electromechanical, for telemetry, 2412
- magnetostrictive, simple method for constants of, 5

Transductors, input- and power-type, for frequencies of 400 c/s and 1·6 kc/s, 3216
- single-phase, design of, 1254
- 3-phase, for magnetic amplifiers, 949

Transformers, a.f., factors concerning use of, 2577
- balun, balance measurements on, 3663
- double-tuned, unequal-*Q*, design of, 3499
- feeding half-wave rectifier circuit, transient conditions in, 3501
- i.f., coupling coefficient of, meter for, 3658
  - input impedance and transimpedance of, 2578
- impedance, modified exponential line as, 3533
- for infrared chopped-beam systems, for operation at 10 c/s, 942
- production by Technograph etching system, 353
- pulse, peaking, design of, 2233
  - series peaking, design of, 1596
  - turns index for design of, (A)1250, 3500
  - using varying-pitch helical windings, 2234
- voltage, design of, 1599

Transients, in networks, analysis of, 1247
- response of filters and transmission lines, formulae for, 1248

Transistors, (See also Valves, crvstal)
- characteristics of, c.r.o. display of, 1437
- control applications of, 792
- equivalent-circuit diagrams for, 3522
- field-effect, unipolar, 3445, theory of, 879
- filamentary, large current amplifications in, 1516
- Ge, and Ge rectifier, theory of, 2821
  - *p-n*-junction, power, 834
  - *p-n-p*-junction, fused-impurity, 876, 877
  - *p-n-p-n*-junction, equivalent circuit of, 878
  - point-contact, base resistance of, effect of electrode spacing on, 882, control of frequency characteristics and stability of, 884, factors in design of, 2487, for frequencies up to 302 Mc/s, 585, mechanism of, 3331
- in grounded-collector connection, parameters of, 3518
- junction, admittance parameters of, bridges for measurement of at 1 kc/s–1 Mc/s, 3359
  - bandwidth limit of, 3747
  - circuit applications of, 3244
  - effects of space-charge-layer thickness in, 874, (D)3212
  - equivalent circuits for, and analogy with valves, 644
  - frequency variation of current gain in, 890
  - l.f. and m.f. characteristics of, 2489
  - *n-p-n*, properties of, 2490, tetrode, for h.f., 877, 1184
  - *p-n*, current amplification factor for, 2488, theory of noise in, 871
  - *p-n-p*, current gain in, 881
  - pulse response of, 3514
  - symmetrical properties of, circuits based on, 2583
- noise in, circuit problems of, 643
  - measurements of, 887
  - meter for production testing of, 2385
- oscillator circuits using, 45
- parameters of, temperature variation of, 883
- physics of, 265
  - and analogue type of, 746
- point-contact, transient effects in, 2491
  - Type-A, trigger circuit using, 3516
- properties of, and applications of, 1351
  - and circuits for, 44
- review of development and applications of, 873
- Si, *p*-type, measurements on, 2823
  - point-contact, properties of, 2822
- small-signal parameters of, measurement of, 3358
- stabilization of amplifier operation of, 688, (C)3248
- in switching circuits, 3515
- test methods and equipment for, 3053
- theory and applications of, 1957, 2239, 2627, 3021, 3444, 3523
- transformer circuits for, 1287
- use in aircraft equipment, 672
- use in f.m. oscillator, 2938

Transistrons, blocking-layer interaction in and fluctuation statistics for, 566

Transmission lines, (See also Cables)
- balanced, attenuation measurement for, 467
  - unscreened measurement of attenuation of, 159
- coaxial, charts for probe measurements on, 458
  - rectangular, characteristic impedance of, 3474
  - two-dielectric, propagation along, 3185
- condition for distortion-free transmission in, 2560, (D)2561
- conical helix, e.m. wave propagation along, 1973
- constants of, approximate formulae for, 619
- delay, compensated, theory of, 1262
  - for digital computers, 3850
  - elastic-solid, diffraction patterns for, 2574
  - high-characteristic-impedance, for pulses of duration $<1\mu s$, 2857
  - interdigital, for travelling-wave valves, 2828
  - low-frequency, design of, (A)1603, 2920
  - ultrasonic, 2921, magnetostrictive, 2067, vitreous-silica, performance of, 347
- exponential, and their radiation loss, 3187
- fixed-length, as circuit elements, 1272
- helical, for microwave measurements, 779
- helical slit, propagation in, 3476
- h.f., effect of losses in, 3475
- h.v., design of in relation to radio noise level, 927
- impedance of, determination by three-point method, 2733
- $\lambda/4$, short-circuited, input impedance characteristics of, (D)319
- laminated, Clogston-type, theory of, 25, 618, 2562
- load impedance for maximum efficiency, 2219
- long, input impedance and location of nonuniformities of, 1579
- microstrip, and associated components, measurements on, 623, 2214
  - for kMc/s range, 621, 2212
  - simplified theory of, 622, 2213
- multiconductor, with h.f. TEM waves, analysis of, 26
- nonuniform, multiple, theory of, 1581
- short, in u.h.f. techniques, 2917
- surface-wave, with bends, propagation along, 3473
  - dielectric-coated, 1906, single-wire, at 10-cm λ, 3186
  - launching process for, 320
  - possible applications of, 620
  - single-wire, theory of, 1580
  - for 1·7–2·4 kMc/s, 930
- uniform, synthesis of, 2880

Transmitters, (See also Television)
- broadcasting, a.m., at WNEW, for continuous operation, 3746, 1-MW, 2176
  - anode-modulated, distortion in, 262
  - high-power, B.B.C. Third Programme, remote control of, 261

Transmitters, broadcasting, speech-input systems for, 824
  - s.w., 100-kW, 2819
  - unattended, B.B.C., monitoring of, 548
- communication, h.f., 4-channel, Type HC.100, 3135
  - 1-MW, for 14·5–35 kc/s, for U.S. Navy, 821
- harmonic-radiation from output stage of, 2482
- h.f., for aerodromes, 3419
- magnetron, a.m., injection-locked, measurements on, 1060, 2483
- marine, design problems of, 3443
- radiotelegraphy, for mercantile-marine vessels, 2818
  - rounding of signals by use of filters in, 1847
- and receivers, for citizens' radio, 2437
- R/T, s.s.b., for 4–23-Mc/s 4-channel system, 541
- s.s.b., phase-rotation, output analysis and alignment techniques for, 2481
  - for s.w. radio link, independent-sideband drive unit for, 2175
- 300- and 400-kc/s, for Palais de Chaillot translation service, 2794

Troposphere, (See also Atmosphere)
- refractive index of, abacs for computation of, 1670
  - measurement of fluctuations and profiles in, 1341
  - vertical and horizontal gradient over U.S.A., 1991
- upper, and lower stratosphere, over southern England, humidity of, 1671

Tuners, automatic, in microwave receivers, 2130
- coaxial-cavity, 470–890-Mc/s, 1952

Tuning, automatic, of h.f. generators with varying load, 681
- electronic, of r.f. circuits, use of ferrite cores for, 3569

U

Ultrasonic absorption. See Absorption.
- applications, echo-sounding equipment with new indicator, 1092
  - flaw detection, elimination of parasitic echoes in, 492
  - fluid-flow measurement 2084
  - h.f. reciprocating drill for hard brittle materials, 2085
  - light-diffraction apparatus for determination of elastic constants, 3072
  - in metallurgy, 2402
  - in rubber industry, 493
  - testing of materials, using $BaTiO_3$ oscillator, 1756
  - tinning of Al, 800, 801
  - torpedo-depth measurement, 1447, 2401
  - whale location, 1757

Ultrasonics, cavitation investigations, 1560
- energy concentration in, 603
- field intensity, in liquids, thermoelectric method of comparison, 3171
  - probe method of measuring, 2195
- field-investigation method based on starch-iodine reaction, 8
- interference of beams incident on and reflected by plane wall, 1558
- interferometer for measurements in, 1223
- in liquids, review of, 1563
- in short-range telephony, 1885
- in solids, and applications, 1884
  - measurement of velocity, 1561
- transmission through plane absorptive plate immersed in liquid, 2868
- velocity, and absorption in dry CO_2-free air, 7
  - in Ar at pressures up to 950 atm, 1559

Units, and dimensions, of electrical quantities, 86

Ursigrams, European, abbreviated codes for, 2650, 2980, (C)2981

V

Vacuum gauge, ionization, cylindrical, magnetron-type, 3000
  - Penning, degassable, 3001, operation of, 2634
- pumps, diffusion, working fluids for, 1686
  - electronic, 2011, 3320
- technique, clean-up of He in arc discharge, 3604
  - getters, Ba, 2321, powdered Zr, quality estimation for, 3034, thorium powder, 2675
  - ionization method of evacuation, 2011, 3320
  - production and measurement of pressures down to 10^{-10} mm Hg, 3603
  - use of membranes in, 110

Valves, (See also Counter tubes; Discharge tubes; Transistors; Transistrons)
- amplifier, resistive-wall, 2498, 3147
- backward-wave, starting currents in, 3752
- beam-deflection, Type E80T, 2843, in multichannel I.G.O. circuits, 2817
- characteristics of, effect of filament voltage on, 1866
  - fine structure of, 3143
- cold-cathode, recent developments of, 2501
- corona discharge, voltage-stabilizer, measurements on, 3155
- counter, decade, ribbon-beam, 3762
- counter and switching, gas-filled, 296
- and c.r. tubes, for television receivers, 1521
- crystal, diode, Si *p-n*-junction, 905
  - diode and triode, review of characteristics of, 264
  - Ge, 1515
  - Ge-diode, influence of contact and of pulse treatment on, 2179, negative resistance in, 2180, point-contact, transient effects in pulse response of, 872, sealed-in construction, 1849, as video detectors, 2475
  - junction-type fieldistors, 880
- diode, cathode-temperature determination from retarding-field characteristic, 1199
  - conductance and noise-power spectrum of, 1196
  - corrected evaluation of anode current in, 1861
  - effect of V_f on I_a in, 1194
  - influence of initial velocities on electron transit time in, 1193

Valves, diode, planar, extension of Llewellyn's transit-time solution, (D)1862, h.f. admittance with retarding field, 290, plasma equations for electron flow in, 1868
  - with plane inclined electrodes, theoretical investigation of, 2509
  - saturated, stability of, 2511, subminiature valves operated as, 1197, (D)2512
  - space-charge smoothing factor for, (A)291, 1196
  - with W filament, saturation current of, 2518
- diode and triode, low-frequency noise in, 1192
- double-beam, for amplification at 3 kMc/s, 3146
- electrometer, low-frequency noise in measurements of, 1185
- electron-stream, influence of wall admittance, 2498
- emission current in, approximation to 3/2-power law for finite cathode, 3757
- gas-filled, for industrial applications, 295
  - triode, discharge processes in, 1542
- gated-beam, Type-6BN6, as fast coincidence counters, 512
- glow-discharge, cold-cathode, inertia effects in, 903
  - large-current, characteristics of, 3457
  - voltage-regulator, characteristics of, 591, peak-noise characteristics of, 2516
- heaters for, extension of operating-voltage range of, 287
- heptode, Type-DK92, in frequency changer for 3·3–30 Mc/s, 818
- for industry and research, classification of, 587
- klystron, construction, properties, operation and applications of, 596
  - equations of oscillations of beams in, 3144
  - floating-drift-tube, investigation of, 1544
  - gridless, 3-cavity, 5-kW, 1213, 3-cavity, high-power, for λ 10·5 cm, 3161
  - high-power, a.f.c. of, 2942
  - power-amplifier, Type-SAL-39, using space-charge focusing, 595
  - reflex, for cm-wave links, 1546, with coupled resonators, 3160, f.m. distortion in, 1545, oscillation mode and bunching efficiency of, determination of, 3159, Type-R5081 for f.m. at cm λ, design of, 1214, 14·5–17·5-kMc/s, design features of, 2853
  - u.h.f., Type-V42, 15-kW, 1212
- magnetron, application of thermodynamics of irreversible processes to, 2847
  - basic principles of, 1209
  - conductance measurements on, 157
  - currents and space charge in, 3764
  - in cut-off state, effects of h.f. wave in, 594, experimental study of, 1210, space-charge distribution in, 592
  - for dielectric heating at 915 Mc/s, 2850
  - early history of, 2851
  - German, 2852
  - grid-type, for modulation at u.h.f., 2519
  - with interdigital circuit, 2187, design of waveguide-loaded resonator for, 2848
  - inverted and planar, efficiency of, (D)2849
  - l.v., tunable, Type PAX3, for beacons, 2183
  - microwave equipment for production testing of, 778
  - mode interactions in, 593
  - multicavity, natural oscillations and mode changes in, 1543
  - multisegment, theory of, 3158, 3458
  - rising-sun, possibility of generating mm-waves with, 297
  - single-cavity, 'turbator', 2518
  - whole-anode, oscillations in, 904
- matching of by means of resistors, 3563
- oxide-cathode, aged, frequency dependence of mutual conductance of, (A)2838
  - characteristics of, changes of, 3755
- pentode, optimum screen voltage of, 294
  - Type-C3m, for a.f. and r.f., 589
- reliable, specifications for, 270
  - technique of, 272
- reliability of, 271
- resnatron, reflex, u.h.f., theory of, 1207
  - u.h.f., axial-flow, 1208
- retarding-field, motion of electrons in, 3157
- screen-grid, limiting sensitivity of, 1538
- sockets, for industrial equipment, review of, 1860
- space-charge-wave, theory of, 1856
- spiral-beam, for u.h.f. television modulation, 2188, 2500
- subminiature, with filament cathodes, reliability of, 3749
- tetrode, 1-kW, u.h.f., 1206
- thyratron, applications for switching and control, 902
  - grid-circuit reliability of, improvement of, 2517
  - inert-gas, arc drop and deionization time in, 3154
  - small-signal control of, 3218
  - for telephone-circuit engineering, 3156
- transit-time, influence of plasma oscillation in, 1525
- transmission-line, proposals for, 269
- transmitting, heat-transfer data for, 2495
  - high-power, for industrial heating applications, design of, 3759, vapotron, 3451
  - Swiss developments in production of, 1548
- travelling-wave, amplifier, large-signal theory of, 2497, low-noise, 275, 277
  - characteristics in dispersive region of delay line, 2826
  - with corrugated rectangular waveguide, 1186
  - developments in, 1524
  - electronically tuned, 3454
  - excitation of e.m. fields by current waves in, 279
  - experimental verification of theory of, 280
  - helix-impedance measurement on, 3753

Valves, travelling-wave, helix-type, theory of, 3453, 10-W, for 15 cm λ measurements on, 2499
  - interaction of space-charge waves with electron beam in crossed fields, 1526
  - with interdigital delay line, 2828
  - long-beam, magnetic electron optics of, 2827
  - low-noise, 273, (C)2496
  - noise measurements on, 3145
  - phase distortion in, 1855
  - power capacity of, factors affecting, 3751
  - recent developments in, 274
  - reduction of noise factor in, 3754
  - reflex, theory of, 276

    disturbance of, relation with geomagnetic activity and solar noise, **3283**
    and fluctuation effects, **1105**
    forecasts for, C.C.I.R.-U.R.S.I. cooperation in, **3092,** comparison of N.B.S. and Spanish methods, **1107,** comparison of Spanish and C.R.P.L. results, **3689,** comparison of Spanish and other methods, **1773**
    over great distances, lateral deflection due to reflection, **520**
    gyro-interaction in, solar influence on, **3693,** at vertical incidence, **2111**
    h.f. and m.f., attenuation characteristics for and application to field-strength calculations, **2774**
    higher-order approximations in, **2108**
    limiting polarization of waves reflected from ionosphere, theory of, **1104**
    oblique-incidence, over equatorial regions, **805,** characteristics of 9-Mc/s pulses during solar eclipse, **2770**
    of plane waves, **2766**
    pulse distortion in, **513**
    ray-path calculations for, **3093, 3691**
    reflection from vertical and horizontal gradients, **2418**
    solution for reflected long waves, **(D)410, 517**
    theoretical group heights of reflection of pulsed 150-kc/s waves, **516**
    v.h.f., review of characteristics of, **2422**
    at v.l.f., l.f. and m.f., review of, **1781**
    at 9·83 Mc/s, fluctuations of azimuth angle, **1774**
  l.f., oblique-incidence pulse measurements at 300 kc/s over 1185-km path, **1474**
    phase-velocity measurements over 177-km land path, **1782**
  magneto-ionic equation for, corrected quasi-transverse approximation to, **514,** physical interpretation of, **515**
  magneto-ionic multiple splitting in, **2114**
  magneto-ionic theory of, **3392**
  magneto-ionic *z*-component, polarization of, **1775**
  matrix analysis of transmission through multilayer dielectric wall, **1668**
  microwave, interaction in gas-discharge plasma, **2637**
  through multilayered media, **90**
  through pair of parallel-wire grids, **3590**
  polar blackouts recorded at Kiruna observatory, **3094**
  polarization of vertically incident 150-kc/s waves, **806**
  reflection, from inhomogeneous medium, **1466**
    from varying media, theory of, **2765**
  scatter-sounding methods of prediction of h.f. transmissions, **201**
  scattered echoes, experiments on, **2776**
  scattered waves in, field strength of, **2775**
  Sommerfeld's surface wave, existence of, **(D)3391**
    nonexistence of, **195, 3686**
  s.w., communication on frequencies exceeding predicted m.u.f. values, **3090**
    long-distance, via meteor-trail reflection, **2117, 2421**
    single-hop via F_2 layer, Delhi to Calcutta, **2116**
  transmission loss in, **1111**
  in transparent periodically stratified medium, **3589**
  tropospheric, in duct of nonuniform height, **1471**
    N.B.S. research programme on, **2768**
    selected references on, **2416**
    and wave mechanics, **2112**
  u.h.f., graphs for, **2118**
    beyond horizon, at 40 Mc/s–4 kMc/s, **1114**
  u.s.w., over the Alps, **3397**
    in Baltic area, and optical refraction, **521**
    and meteorology, **3694**
  v.h.f., COZI skip-distance indicator, **3600**
    diffraction effects of hills, **3091**
    long-distance, multiple bursts of signal in, **2419**
    meteorological effects on, **1784**
    reduction of transmission loss and fading for long paths ove mountainous terrain, **3396**
    in relation to television in United Kingdom, **1110**
  of very long waves, and wave spectrum of lightning, **802, 1772**
  wave-theory field calculation for total reflection, **1006**
  16-kc/s, interpretation of measurements by waveguide theory, **2773**
    by oblique reflection from ionosphere during solar flares, **2769**
  56-Mc/s, scattering from lower ionosphere, **2119**
  85-Mc/s, experimental study of, **2423**
  100-Mc/s, correlation with meteorological effects, **2772**
Waveform, (See also Analysis, frequency)
  analysis, for harmonics up to twelfth, **1427**
  recurrent, high-speed, Type-500 monitor for, **482**
Waveguides, attenuation in and surface roughness of, **1584**
  calculation of excitation of, **2563**
  with capacitive pins, as microwave λ/4 plate, **(C)2215**
Waveguides, circular-section, excitation of, **2564**
    for low-loss multimode long-distance transmission, **1585**
    magic-T units for, **3219**
    short sections of, measurement of TE_{01} attenuation in, **1068**
    with TE_{01} wave, susceptance of circular obstacle in, **2565**
  cylindrical, with coaxial dielectric rod, cut-off frequency of, **2886,** propagation in, **2885**
    containing ferrites, transmission modes in, **1586**
    transients in, **2887**
  designation of waves in, with reference to German 1944 Standards, **2217**
  dielectric, radiation from, **322**
  dielectric and metal, analysis and comparison of, **28**
  dielectric-filled, electron beam in, theory of **382**
  diffraction at plane diaphragms in, **625**
  disk-loaded, concept and measurement of impedance in, **626**
  electroplated, attenuation and surface roughness of, **2881**
  Faraday rotation in, **(C)1232**
  containing ferrites, modes in, **2888**
    properties and applications of, **931**
  filled with two or more dielectrics, propagation in, **1907**
  h.f., relative power-carrying capacity of, **(D)27**
  high-power dummy loads for, **2892**
  impedance matching by means of discontinuities in, **3477**
  inhomogeneously filled, calculation of propagation constants for **(D)624**
  junctions for, symmetrical, scattering matrix of, **66**
    two-port, graphical analysis of, **3191**
  parallel-plane, diaphragm-loaded, propagation in, **3189**
    layered-dielectric, propagation in, **321**
  propagation in, theory of, **1582**
  radiation from, visual observation of, **1231**
  rectangular, diaphragms with slits in, **1583, 2566**
    with longitudinal conducting membrane, field in, **2882**
  rectangular and spherical, slot coupling of, **3193**
  rhombic cross-section, propagation in, **2883**
  rigid, standard sizes of, U.S. specifications for, **2891**
  shielded-dielectric-rod, **2218**
  containing spiral, partly filled with dielectric, theory of, **2884**
  with thick obstacles, impedance-matching properties of, **3190**
  transient phenomena in, **2216**
Wavelength measurement, by spectrometer and interferometer methods, **2384**
Waves, (See also Diffraction; Sound; Transmission lines, surface-wave)
  acoustic, concept of energy of, **2860**
    momentum of, **3165**
    in viscous medium, forces due to, **2536**
  a.m., mechanical synthesis of, **469**
  cm-λ, scattering of by precipitation, **1363**
  e.m., ionosphere-reflected, chart for, **1469**
Waves, e.m., microwave, reflection by metal-plate structures **389**
    and photons, relation between, **709**
    scattering, and attenuation by nonspherical atmospheric particles, **2314,** in inhomogeneous atmosphere, **804, 1468,** by precipitation, **1362**
    standing, measurement of high s.w.r. of, **1070**
    submillimetre, use of Tcherenkov effect for production of, **1970**
    in tubes, theory of, **3555**
    velocity of, proposed use of cylindrical surface-wave resonator for determination of, **3355,** shoran determination of, **1470**
  magnetohydrodynamic, in conducting liquids, **1661**
    generalized formulae for, **2636**
    in ionized He, demonstration of, **89**
    longitudinal, **2635**
    studies of, **1660**
  space-charge, in electron streams, **2486**
  ultrasonic, in liquids, demodulation of, **2864,** measurement of velocity in, **2859**
    in solids, velocity of, **1225**
    visualization of, phase method for, **2865**
Welding, electric, measurement of effective values of currents for, **194**

Z

Zeeman effect, at microwave frequencies, measurement of, **1318**

ERRATA

In "Abstracts and References" throughout the year

Abstract No. 41 Cancel the dagger in the U.D.C. number.
" " 121 In line 4, for 'larger' read 'large'.
" " 384 For '537.533.8' read '537.534.8'.
" " 454 For '621.385.5' read '621.383.5'.
" " 763 In line 9, for '(*f*)*t*' read '*f*(*t*)'.
" " 1377 For 'S. T. Kalashnikov' read 'S. G. Kalashnikov'.
" " 1547 For '621.38(061.4)' read '621.38 : 061.4'.
" " 2328 For 'R. Freymann' read 'R. Freymann, R. Rohmer & B. Hagene'.
" " 2576 In line 9, for 'required' read 'described'.
" " 2894 For 'S. K. Dike' read 'S. H. Dike'.
" " 3015 For '537.311.35' read '537.311.33'.
" " 3095 For '3905' read '3095'.
" " 3408 For '621.018.78' read '621.3.018.78'.

LIST OF JOURNALS

A selection of the journals which are regularly scanned is given below, together with the addresses of publishers or editorial offices and the abbreviations of titles as used in the Abstracts and References. Applications for copies of any journal should be made to the addresses given.

The full title of each journal is given first and is followed by the address, the abbreviated title being shown within parentheses. In a few cases the nature of a journal is indicated, where neither the title nor the address shows it clearly.

A

Acta physica austriaca, Springer Verlag, Wien I, Mölkerbastei 5, Austria. (*Acta phys. austriaca*)

Acta Polytechnica, Royal Swedish Academy of Engineering Sciences, Stockholm, Sweden. (*Acta polyt., Stockholm*)

Acustica, S. Hirzel Verlag, Gotthardstrasse 6, Zürich, Switzerland. (*Acustica*)

Advances in Physics, Taylor & Francis Ltd, Red Lion Court, Fleet Street, London, E.C.4, England. (*Advances Phys.*)

Akustische Beihefte, S. Hirzel Verlag, Gotthardstrasse 6, Zürich, Switzerland. (*Akust. Beihefte*)

Alta Frequenza, Associazione Elettrotecnica Italiana, Milano (202), Via S. Paolo 10, Italy. (*Alta Frequenza*)

Annalen der Physik, J. A. Barth, Leipzig C1, Salomonstrasse 18B, Germany. (*Ann. Phys. Lpz.*)

Annales de Géophysique, Service des Publications du C.N.R.S., 45 rue d'Ulm, Paris 5^e, France. (*Ann. Géophys.*)

Annales de Physique, Masson & Cie, 120 Boulevard Saint-Germain, Paris 6^e, France. (*Ann. Phys., Paris*)

Annales de Radioélectricité, 10 rue Carducci, Paris 19^e, France. (*Ann. Radioélect.*)

Annales des Télécommunications, 3 & 5 Boulevard Pasteur, Paris 15^e, France. (*Ann. Télécommun.*)

Annali di Geofisica, Istituto Nazionale di Geofisica, Città universitaria, Roma, Italy. (*Ann. Geofis.*)

Applied Scientific Research, Martinus Nijhoff, Lange Voorhout 9, The Hague, Netherlands. (*Appl. sci. Res.*)

Archiv der elektrischen Übertragung, S. Hirzel Verlag, Stuttgart, Germany. (*Arch. elekt. Übertragung*)

Archiv für Elektrotechnik, Springer Verlag, Heidelberg, Neuenheimer Landstrasse 24, Germany. (*Arch. Elektrotech.*)

Archiv für Meteorologie Geophysik und Bioklimatologie, Series A, Springer Verlag, Wien I, Mölkerbastei 5, Austria. (*Arch. Met., Wien*)

Archiv für technisches Messen, R. Oldenbourg Verlag, München, Lotzbeckstrasse 2b, Germany. (*Arch. tech. Messen*)

Arkiv för Fysik, published for Royal Swedish Academy of Sciences by Almqvist & Wiksells Boktryckeri A.B., Stockholm, Sweden. (*Ark. Fys.*)

A.T.E. Journal (incorporating Strowger Journal), Automatic Telephone & Electric Co., Strowger Works, Liverpool 7, England. (*A.T.E. J.*)

Audio Engineering, Radio Magazines Inc., 10 McGovern Avenue, Lancaster, Pa., U.S.A (*Audio Engng, N.Y.*)

Australian Journal of Applied Science, Commonwealth Scientific and Industrial Research Organization, 314 Albert Street, East Melbourne C2, Australia. (*Aust. J. appl. Sci.*)

Australian Journal of Physics (formerly **Australian Journal of Scientific Research Series A**), Commonwealth Scientific and Industrial Research Organization, 314 Albert Street, East Melbourne C2, Australia. (*Aust. J. Phys.*)

A.W.A. Technical Review, Amalgamated Wireless (Australasia) Ltd, Sydney, Australia. (*A.W.A. tech. Rev.*)

B

B.B.C. Quarterly, British Broadcasting Corporation, 35 Marylebone High Street, London, W.1, England. (*B.B.C. Quart.*)

Beama Journal, British Electrical and Allied Manufacturers' Association, 36 Kingsway, London, W.C.2, England. (*Beama J.*)

Bell Laboratories Record, 463 West Street, New York 14, N.Y., U.S.A. (*Bell Lab. Rec.*)

Bell System Technical Journal, American Telephone and Telegraph Company, 195 Broadway, New York 7, N.Y., U.S.A. (*Bell Syst. tech. J.*)

British Journal of Applied Physics, 47 Belgrave Square, London, S.W.1, England. (*Brit. J. appl. Phys.*)

Brown Boveri Review, Baden, Switzerland. (*Brown Boveri Rev.*)

Bulletin de l'Académie des Sciences de l'U.R.S.S., (*a*) série physique, (*b*) série géophysique, (*c*) classe sciences techniques, Academy of Sciences, Moscow, U.S.S.R. (In Russian.) (*Bull. Acad. Sci., U.R.S.S.,* (*a*) *sér. phys.,* (*b*) *sér. géophys.* (*c*) *tech. Sci.*)

Bulletin de l'Association suisse des Électriciens, S.A. Fachschriften-Verlag and Buchdruckerei, Stauffacherquai 36–40, Zurich 4, Switzerland. (*Bull. schweiz. elektrotech. Ver.*)

Bulletin de la Société française des Electriciens, 55 Quai des Grands-Augustins, Paris 6^e, France. (*Bull. Soc. franç. Elect.*)

C

Câbles et Transmission, Sotelec, 16 rue de la Baume, Paris 8^e, France. (*Câbles & Transm.*)

Canadian Journal of Physics, National Research Council, Ottawa, Canada. (*Canad. J. Phys.*)

Chalmers tekniska Högskolas Handlingar, N. J. Gumperts Förlag, Göteborg, Sweden. (*Chalmers tek. Högsk. Handl.*)

Communication Engineering, The Publishing House, Great Barrington, Mass., U.S.A. (*Commun. Engng*)

Communication News, Philips Telecommunications Industries, Hilversum, Netherlands. (*Commun. News*)

Communications on Pure and Applied Mathematics, Interscience Publishers Inc., 250 Fifth Avenue, New York 1, N.Y., U.S.A. (*Commun. pure appl. Math.*)

Comptes Rendus Hebdomadaires des Séances de l'Académie des Sciences, Gauthier-Villars, 55 Quai des Grands-Augustins, Paris 6^{e}, France. (*C.R. Acad. Sci., Paris*)

Comptes Rendus (Doklady) de l'Académie des Sciences de l'U.R.S.S., Academy of Sciences, Moscow, U.S.S.R. (In Russian.) (*C.R. Acad. Sci. U.R.S.S.*)

E

Electrical Communication, International Telephone and Telegraph Corporation, 67 Broad Street, New York 4, N.Y., U.S.A. (*Elect. Commun.*)

Electrical Engineering, Journal of the American Institute of Electrical Engineers, 500 Fifth Avenue, New York 36, N.Y., U.S.A. (*Elect. Engng, N.Y.*)

Electrical Journal (formerly **Electrician**), Bouverie House, 154 Fleet Street, London, E.C.4, England. (*Elect. J.*)

Electrical Manufacturing, 1250 Sixth Avenue, New York 20, N.Y., U.S.A. (*Elect. Mfg*)

Electrical Times, Sardinia House, Sardinia Street, London, W.C.2, England. (*Elect. Times*)

Electronic Application Bulletin, N.V. Philips Gloeilampenfabrieken, Eindhoven, Netherlands. (*Electronic Applic. Bull.*)

Electronic Engineering, 28 Essex Street, London, W.C.2, England. (*Electronic Engng*)

Electronics, 99–129 North Broadway, Albany 1, N.Y., U.S.A. (*Electronics*)

Elektrotechnik und Maschinenbau, Journal of the Elektrotechnischer Verein Österreichs, Springer Verlag, Wien I, Mölkerbastei 5, Austria. (*Elektrotech. u. Maschinenb.*)

Elektrotechnische Zeitschrift, Edition A & B, VDE-Verlag G.m.b.H., Frankfurt/Main, Osthafenplatz 6, Germany. (*Elektrotech. Z.*)

Endeavour, Imperial Chemical Industries, Millbank, London, S.W.1, England. (*Endeavour*)

Engineer, 28 Essex Street, London, W.C.2, England. (*Engineer, Lond.*)

Engineering, 35 & 36 Bedford Street, London, W.C.2, England. (*Engineering, Lond.*)

Ericsson Review, Stockholm 32, Sweden. (*Ericsson Rev.*)

F

Fernmeldetechnische Zeitschrift, Vieweg & Sohn, Braunschweig, Burgplatz 1, Germany. (*Fernmeldetech. Z.*)

Frequenz, Schiele & Schön, Berlin, S.W.29, Boppstrasse 10, Germany. (*Frequenz*)

Funk und Ton, Verlag für Radio-Foto-Kinotechnik G.m.b.H., Berlin-Borsigwalde, Eichborndamm 141–167, Germany. (*Funk u. Ton*)

G

G.E.C. Journal, General Electric Company, Magnet House, Kingsway, London, W.C.2, England. (*G.E.C. J.*)

G.E.C. Telecommunications, General Electric Company Ltd, Coventry, England. (*G.E.C. Telecommun.*)

General Electric Review, General Electric Company, 1 River Road, Schenectady 5, N.Y., U.S.A. (*Gen. Elect. Rev.*)

General Radio Experimenter, General Radio Company, 275 Massachusetts Avenue, Cambridge 39, Mass., U.S.A. (*Gen. Radio Exp.*)
